Well, the 95 is a good scanner. Lacks a feature some of the older trunk trackers have - "ID mode" is the only thing I can call it. The older TT's had a mode where you could go up / down through your talkgroups. So say you wanted to switch from PD to Fire, you can do so easily. No real way on the 95. You put in your talkgroups, scan them, and then once you hear traffic, you can put it in manual.

The frequency counter scanner isn't a trunktracker, so it depends on if you want a frequency counter / scanner or a scanner capable of trunk tracking. :)

Hey, BTW: Did you work at a small ISP in Sunnyvale?

Evan

33122. Need help with MERA Sonoma Mtn site

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-11-01 00:03:34 UTC
From: J Pott
Topic: 33122 Message: 33122

I input the MERA system in my Pro96 today and was attempting to monitor the system. I initially entered just the Sonoma Mtn site frequencies seeing how I am right below the mountain I figured it would work best. I confirmed that I was picking up the control channel with 99% signal strength yet I never heard any users on the system. I then setup the scanner with the MERA east zone frequencies and I was able to receive the system and hear users on it. Has anyone had any luck monitoring the Sonoma Mtn site. I would like to use this site as it comes in a quite a bit better than the East zone system.

BTW: it appeared that the Sonoma Mtn site was processing something from the MERA system as the bottom line of the Pro96 displayed -> M36:7239 99%

Thanks
John

33123. Re: [bayscan] Need help with MERA Sonoma Mtn site

Yahoo group: bayscan (2004-11 — 2004-12)

From: john Beatty
Topic: 33122 Message: 33123

I don't know if this applies or not. but with the MERA system

if a MERA radio is not within a certain range of a site, it will not transmit.

It sort of waits for a radio with an assigned talkgroup to be within a certain range.

At least that is the way I understand the operation, don't take this to the bank

though. That's just the way I remember it.

John,

The Sonoma Mountain site is a IntelliRepeater site. This means it's essentially a backup to the main east and west sites in case of failure because the IntelliRepeater can still act as trunking repeater without the need of a central site controller. You'll generally never hear traffic off Sonoma Mountain unless something's wrong with the main sites. I listen to the east site in Petaluma and the control channel is about as strong for me as the Sonoma Mountain control channel.

Regards, Jim

33125. FRS use in Iraq (OT)

Pro95 is a good radio. I have two of them for kick around.

Negatives>

No LTR trunking only Motorola and EDACS
Trunk groups are a bit klunky to operate
NO CTCSS/DCS which is a PAIN in the rear in a metro area

I hear the Pro97 will be out by Xmas, which will address these problems but
will
be a NON digital capable radio.

SFPD using A9 so far for Castro (13104) Probably will use addtional TGs. Sheriffs used SFSO A16 (16242) last year.

They are closing streets at 1800 hours / there will be numerous gated entrances with checks for alcohol and weapons. Asking $3.00 donation to off-set costs. Castro Closed from 16th to 19th.

SFFD/EMS will also have a mobile CP set up , not sure of their TGs yet.

KGO reported they expect 300,000 with about 200 Police Officers assigned.

yep...

just got back. monitored SCU most of the evening (along with MHPD and santa clara county fire). sounded like business as usual for winter operations. i'm sure things will be back to full-swing as we know them next fire season. SCU was doing all the normal dispatching. after spending the first 20 years of my life in Morgan Hill, I can't say anything sounded different for CDF.

Not sure where this was but Alco called a Mass casualty incident for an auto accident in the san leandro/hayward or castro valley area. I just caught all the AMR units doing thier ringdowns to Eden Trauma center. Some younger kids, most unrestrained, some ejections, most sound pretty critical. Also as of now 10:40 Fremont FD and CHP working a major accident in Fremont on 680 Northbound near Durham. one lane of freeway open. a mess of cars and several Major criticals... Caught the ringdowns on Alco ringdown TG 20816 and the Fremont accident is on Alco Tac 5 I believe.

Monument/Mt. Allison is in Alameda County.

I think parts of Loma may be Santa Cruz County as well.

Perhaps why it didn't show up in a license search.

Not correct. Your link shows the Pro-83, which is not a trunk tracking scanner and is already available. The Pro-97 is a much different beast, with LTR trunking, military air, CTCSS, and the "close call" feature. It doesn't have any digital capability. I think the closest RS radio in terms of capability would be the Pro-92 so this would be a good replacement for people who don't need digital but would like the features of the Pro-92 in a (hopefully) better performing radio.

Regards, Jim

Date: 2004-11-01 14:03:03 UTC
From: Brian Wolter
Topic: 33062 Message: 33144

According to the FCC, Timeslot doesn't have 464.7 anywhere in the USA. It does not have any transmitter sites in Santa Cruz Co. There are only four sites listed in Alameda Co, the only real possible one being "Signature Wireless Group", whatever that is. In fact, none of the Bay Area counties have any other real possibilities. Also, all listings there are IG conventional not trunked.

Now that I think about it, is 464.7 in the range for LTR trunked? Actually, wouldn't that be conventional?

It is quite possible that the listing in radioreference.com is incorrect. After all, I don't think anyone is actually in charge of verifying the database. Members just add to the database in good faith, corrected (if at all) by members who find errors. (Or what they think are errors.)

Perhaps the best thing to do is what you already said: monitor it with logging software and with audio recordings. Maybe you could monitor it both in conventional mode and LTR to see what happens.

I own a Pro-95 and I got it for the $150 sale price about a year ago.
True, it doesn't have tone or LTR capabilities, but it's still a very
good value at the sale price. I like it.

Pretty much so. Each site will broadcast, over the CC, adjacent sites and their control channels. The radio then samples these control channels and switches to that site if a better RSSI is found. It then affiliates to a specific talkgroup which causes the site to begin transmission of that talkgroup (if no one else has affiliated within a specified time).

So, no radios on the site, no traffic. This goes for San Mateo and LLNL also.

33149. 121.5MHz traffic yesterday

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-11-01 20:30:25 UTC
From: Tim T
Topic: 33149 Message: 33149

Sunday afternoon at around 3:45PM I was out for a joy-ride in the Woodside/La Honda/Pescadero area & heard some weak traffic on the VHF emergency frequency of 121.50MHz AM.

It wasn't just the quick radio-check type of thing that's occasionally heard on that channel, but it was sustained communication between United 960 (or 950) Heavy & an unknown station, probably a ground facility like SFO or SJC.

At times, the aircraft was coming in pretty weak, due to all the hills near me, but one of the final transmissions was the aircraft acknowledging that they were cleared for a final approach on a runway.

I'm just wondering if anyone else caught this traffic, and knows what was going on.

Tim

33151. OT KSJO 92.3?

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-11-01 23:18:25 UTC
From: Roger Strohmeyer
Topic: 33151 Message: 33151

Hi all,

I know this is off topic but do any of you south bay folks know what happened to KSJO 92.3 out of San Jose? They were on the air 35 years (Rock) and poof, all of the sudden I hear Hispanic music on the station and http://www.ksjo.com/ is shut down.

-Roger

PS maybe Lamont and Tonelli going to The Bone was their downfall?

Well KSJO was TRYING to get listenership for about a year or so, playing commercials on their sister stations and such, and yes the loss of L&T as well as the Mikey show did make them have to shut San Jose's KSJO down after 35 years. Now it is in fact a hispanic format for 92.3. Shitty!

Yeah, they figure they get a larger audience by going Spanish is what I read. Its the last real rock station in the South bay. I was never a real fan of their brand of heavy metal and such. BUT, clearly, Lamont and Tonelli were a huge draw in the mornings. I listened to KSJO EVERY Friday morning. I still miss DIRTY FRIDAY, those calls were great. Its the one time my scanner was on 92.3 instead of fire/police/ EMS etc.

UAL 960 is a normally scheduled LAX-SFO 737-300 that arrives around 3:45pm daily, so that was probably it. No idea what the problem was. In the future you could try listening in to the United maintenance channel, but a LOT of that is done with ACARS now.

33158. Controlled burn / structure fire tomorrow

It'll be in Mountain View near El Camino and Castro. Won't know much more until I'm there, but might be some good listening. I'm guessing either Mountain View Fire (154.025) or their TAC channel - I don't have the frequency offhand.

I believe it'll be around 9AM.

If I'm allowed, I'll put up some photos from it.

Without saying too much, it's a 1 Single Family.

I lived a while back at 1055 Boranda. THAT PLACE is prime for a controlled burn. Although might not last too long - the cockroaches holding it up would flee too quickly.

33166. Narrowbanding interference

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-11-02 01:29:33 UTC
From: Tim
Topic: 33166 Message: 33166

In addition to 151.235MHz, the Mid Peninsula Open Space Preserve is listed in some sources as having 151.490MHz. I don't think I've ever heard any traffic on it, but I keep it in my scanners because I spend a decent amount of time hiking, biking, and driving through some of their areas. Of course, I also have their main freq 151.235MHz, with several different CTCSS tones, each referred to as a different channel).

I don't have any CTCSS programmed in for 151.490, because I don't know what it/they are.

ANYWAY, there is a new (?) allocation on 151.4975MHz which seems to be a high-profile repeater, string enough to bleed through on 151.490MHz pretty much no matter where I am in the SF Bay area.

I do already have 151.490MHz programmed in with the "NFM" Narrowband FM bandwidth setting.

This is an indication of problems to come, as more licenses are issued for the 'narrowband' refarmed spectrum.

I haven't researched who the 151.4975MHz locals are yet. The few times I've tuned up the 7.5kHz to listen in, it's sounded like some sort of delivery service.

The Pro-83 is on sale - at least it was in the Mountain View (San Antonio / El Camino RS) for $55.

<http://www.radioshack.com/product.asp?catalog%5Fname=CTLG&category%5Fname=CTLG%5F008%5F009%5F010%5F003&product%5Fid=20%2D501>

200 channels, small, and has the Signal Stalker feature - acts as a frequency counter, and opens up the audio if it gets a nearby transmitter.

This seems to be local - people in the east coast went to RS and it's still $119 there.

YES, Half off.

Good News - The Mid Peninsula District does NOT use 151.49. As far as 151.4975 -- its been licenced since July of 1999 and is part of a 3 frequency trunked system with transmitters located near Grizzly Peak. That frequency -- COULD have been applied for by ANY Public Safety user -- just as well as a Business user. It was NOT. It's who get thee First -- with the CASH. That's the FCC under Michael Powell. You get what you pay for. Something to think about TODAY. If its open -- its open to anyone. IF 155.475 has no users within a certain area - even a BUSINESS USER could apply to use the channel. 460.60 is used in downtown Seattle by a Taxi comany. 45.06 is used in Washington State by a logging company. Use it or loose it. The CDF could have applied for 151.4975 --but didn't. The CHP uses all of the channels from 42.02 through 42.94 -- except for 7 frequencies. A towing service could apply for 42.14 or 42.90 or 42.94. Talk to the FCC and ask them WHY.
Gee - 42.94 and 42.14 would make a nice repeater pair. HMMMM.

I heard them asking units to use Tac 5 but there was lotsa activity on Cmd 3. Although close to my home, I didn't pay too much attention to it (been busy). It seems they got it under control quickly but it seems there was a lot of chaos. Later in the night, store owners could come in. Also request for plywood.

I'll grab my camera to take some photos on the way to work today.

Mike

From: caladded@aol.com
Topic: 33175 Message: 33176

It was the first time I heard them use mutual aid on a 3rd alarm. Prior to this , it usually went to a 4th before they called M/A . In particular Santana Row got 2 Engines , 1 Truck and 1 BC from Santa Clara city on the 4th although a 5th and 6th alarm followed shortly with San Jose units.
Last nights fire wasn't all that far from Santana row , seems SJFD has changed the way they call M/A i.e. calling them in earlier.Last night however, County sent in the M/A not S.Clara City

in a few years, they will have 5 new stations with 5 new Engines and 2 more Truck co.s We'll see if they adjust responses then.

I would be interested in which stores burned , couldn't figure which side of Saratoga last nights fire was on ?? thanks

> I would be interested in which stores burned , couldn't figure
>which
>side of Saratoga last nights fire was on ?? thanks

fire was on the stores facing Saratoga Ave., the donut shop and the Picture store. There is a pile of burned debris in the parking lot facing Saratoga Ave. Lion market is untouched so the action was on the stores facing Saratoga Ave.

It looks like some large appliances were in the debris pile and a couple doors have plywood over them including one store on the Lion side (did they crash the door to gain access to the other side of the fire?).

Anyway, I got some photos and hope to download these around 11 or 12 today.

The parking lot on the Saratoga Ave side appears to be all wet but when I walked through it, it was kind of slippery and somewhat sticky (a fire foam of sort?).

There is yellow tape all over the parking lot so the whole shopping center was taped out. It must have been a huge gathering of equipment although it didn't look like a really big fire. But they must have called in the whole Ground Show just in case.

Thanks Mike , I know exactly the stores you speak of , got a donut or two out of that place in the past.

The fire got a response from San Jose of Engines 14,15,10.4 and 7 , Truck Companies 14 , 4 and 1. Battalions 10 (IC) 1(operations) and 29(safety) plus one or two other chiefs paged out. Air unit (breathing support) 6 and HIT(hazardous materials team) 29 ((they respond to all 2nd and greater alarms , hazards or not)) .Med 30 also.

County sent Engines 2,9 , Truck 1 and Battalion 7 (3rd alarm reponse)

the donut shop is 10-7, a major loss for the Nora 2 beat for SJPD.

hi all,

Below are photos I took of last night's (Monday) fire at Saratoga and Kiely
in San Jose.

http://www.batnet.com/mfwright/saratoga-kiely-fire1.jpg
http://www.batnet.com/mfwright/saratoga-kiely-fire2.jpg
http://www.batnet.com/mfwright/saratoga-kiely-fire3.jpg
http://www.batnet.com/mfwright/saratoga-kiely-fire4.jpg
http://www.batnet.com/mfwright/saratoga-kiely-fire5.jpg
http://www.batnet.com/mfwright/saratoga-kiely-fire6.jpg
http://www.batnet.com/mfwright/saratoga-kiely-fire7.jpg

I will leave these here for a month or so.

Below is the text of earlier emails I sent out.

Mike
at 1110 hrs

>Tac 5 / 155.88
> >
> > on Command 3 / 154.115

I heard them asking units to use Tac 5 but there was lotsa activity on Cmd
3. Although close to my home, I didn't pay too much attention to it (been
busy). It seems they got it under control quickly but it seems there was a
lot of chaos. Later in the night, store owners could come in. Also request
for plywood.

I'll grab my camera to take some photos on the way to work today.

Mike
Tuesday morning, 0655.

fire was on the stores facing Saratoga Ave., the donut shop and the Picture
store. There is a pile of burned debris in the parking lot facing Saratoga
Ave. Lion market is untouched so the action was on the stores facing
Saratoga Ave.

It looks like some large appliances were in the debris pile and a couple
doors have plywood over them including one store on the Lion side (did they
crash the door to gain access to the other side of the fire?).

Anyway, I got some photos and hope to download these around 11 or 12 today.

The parking lot on the Saratoga Ave side appears to be all wet but when I walked through it, it was kind of slippery and somewhat sticky (a fire foam of sort?).

There is yellow tape all over the parking lot so the whole shopping center was taped out. It must have been a huge gathering of equipment although it didn't look like a really big fire. But they must have called in the whole Ground Show just in case.

Nope. No sense - 2 in 2 out means even if I arrived first on scene, I'm not going in until at least one other person arrives. And not to mention since I don't have hose and water in my car, no sense in going in anyway. Most volunteer departments the SCBA's are on the engine, not with the volunteers. And not to mention I'm not FF/I certified yet, which means no going into burning buildings for me yet. :)

Hi all,

November 3rd, 8th, and 9th, Santa Clara City will be hosting an MCI (multi-casualty incident) training and drill event. The classroom portion will be held at the Walsh Ave. training center and the drill portion at Great America theme park. The drill will have volunteer patients decked out with simulated injuries.

Times for the drill: 0830 to 1215 overview, classroom time, and lunch.1215 to 1230 drive to great America. 1230 to 1430 drill. 1430 to 1500 incident review. (long day!)

Communications: WHITE 1 (154.280). And per the training flier: BAYMACS will be used for the first time in this type of event. BAYMACS simulcasts over: 155.475, 460.025, 482.3375, and 867.5125.

Should be interesting to hear how the BAYMACS system works for a major event.

Yup. It's a frequency counter that also lets you hear the audio.

I'll be writing a short review of it shortly.

Heck like you said, even without it, a 200 channel scanner for $55 is a
bargain.

Not that I recall.

A 200 channel crystal controlled scanner?? I don't think such a beast ever
existed. I have the pro-83 in the other room. It's very much synthesized.

Topic: 33197 Message: 33206

Here's my mini review of the 83:

Ok, first off, the sensitivity is GREAT. I picked up HT's from about a half a block away at the fire today. I also picked up a bit of paging at my house - voice pager type traffic. There's a huge construction site near my house, so it may be a onsite pager at the site. I also picked up what sounded like Mountain View's garbage trucks - base and mobile, when I was at the Boranda fire. "Unit XXX, please go back to XXX Latham Street, customer paid for a second pick up." Not sure if maybe they were dispatched right where I was or maybe they have a repeater there.

Ok, on to the Signal Stalker feature. Basically it can operate in the background while you scan or listen to channels. It sounds like the priority feature on most scanners - a short 'mute' every few seconds. It's a bit 'long', however rarely has caused me to miss any major radio traffic unless someone talks fast. :)

So basically, you use the Signal Stalker in the background. You can set the scanner to a channel with 0.0 programmed in and then you basically have a frequency counter. So here's the quirk - If you simply put the setting for 'alert', it stalks all bands, then alerts you based on one of a few settings - no alert, beep, flash, or beep and flash. My method is beep and flash. So a signal comes in - beep / flash and the audio is heard through the speaker. You must now hit any key to see the frequency. It is now in 'band' stalk - so let's say the first frequency it found was VHF. If you leave it as is, it will now only stalk VHF. You need to put it back to normal 'scanner' mode (simply hit HOLD key to go back to whatever channel you were on) and it will resume stalking. Otherwise, it is now only stalking that band. Yes, annoying. But for the price, I'll live with a few minor annoyances.

Evan

Yes , your need a digital scanner for MERA and San Mateos' TRS . your choices , as I know of are

Radio Shack : Pro 96 HH

Uniden : BC250D (needs card) or BC296D (comes with card) both HHs

BC785 (needs card) or BC796D (had card) both mobile/base units

A two-hundred channel "crystal" PORTABLE would be as big as a Bread Box --- and about as heavy. No -- the Pro-83 is just a cheap 200 channel scanner --- that they added the special feature to. But even at $ 55 bucks -- I would buy one. But they are out of stock. It's a NEW item. The Bay Area was some sort of Marketing test. Call the Customer Rep at the radio shack 800 number and tell them that you MISSED the sale -- but if they would offer the same sale again --- you would buy one. That may get the ball moving. --- Darn - I have about 900 crystals to get rid of now - I sure don't need another 200 crystals.

for anyone up ....East Palo Alto is on a search for a perp who took foot bail following a pursuit in which the perp hit the patrol vehicle at least twice and hit several parked cars. Crashed around University and Runnymeade and ran to the 500 block Sacramento (real BAD block)

suspect is a HMA , 20s , light skinned with shoulder lenth brown hair and a red jacket. Menlo Park PD with 3 units assisting and a couple S/O units including a K9 on scene.

requested air support from CHP , but they only have a fixed wing with an eta of 45 minutes........cancelled that request.

all units on EPA Primary. 488.3875

0423

Evan,

How's the Stocker's sensitivity and selectivity? How well do they "find" freqs, and how well do they "select" legitimate freqs?

Freq counters/recorders tend to have a few problems: (1) Either they're too sensitive and not selective enough that every signal around (pagers, cell phones, radio towers, even intermod or other interference) overwhelm them--so they "find" nothing. One way around this is to use a filter, but this would have obvious effects on the receiver function of the -83. (2) Or they aren't sensitive enough and only pick up something when you're right on top of the transmitter--even when pagers, radio towers, etc aren't present--if they "find" anything at all.

I've been interested in the Opto Scout and Digital Scout for quite some time. They have a pretty good reputation. But, I've been having a hard time parting with their price; something always gets in the way. The Pro-83 is a good price, even at full.

Also, how is battery life? I notice that it uses 2xAA, which is great! The little 2xAA Icom R-2 lasts a long time. But how log do they last when scanning and Stocking?

My guess is you were receiving bleed over from the aircraft talking to Norcal Approach, possibly 120.35, but more likely 135.65. The latter frequency issues approach clearances for SFO to aircraft in the Woodside area. You probably did not hear the ground station (the controller) because their signal was not strong enough to bleed over on to 121.5. If you did not hear other air carriers talking then perhaps the United flight's bad transmitter was splattering across the band and you happened to pick it up on 121.5.

Brian

Hi all,

November 3rd, 8th, and 9th, Santa Clara City will be hosting an MCI
(multi-casualty incident) training and drill event. The classroom portion
will be held at the Walsh Ave. training center and the drill portion at
Great America theme park. The drill will have volunteer patients decked out
with simulated injuries.

Times for the drill: 0830 to 1215 overview, classroom time, and lunch.1215
to 1230 drive to great America. 1230 to 1430 drill. 1430 to 1500 incident
review. (long day!)

Communications: WHITE 1 (154.280). And per the training flier: BAYMACS will
be used for the first time in this type of event. BAYMACS simulcasts over:
155.475, 460.025, 482.3375, and 867.5125.

Should be interesting to hear how the BAYMACS system works for a major
event.

Besides the fact that this drill was posted yesterday here , its real obvious its a drill. All the transmissions are coming over quite DULL . you can bet if this were real the voices would be quite " different".

Hearing just about all FDs in the County , Plenty of AMR plus privates EMS as well. Still , interesting to monitor

yes, Nina your right , they mean the same thing. if your driving down the freeway, you can usually figure it out even without a scanner.. you see black and whites and most off/on ramps. In San Mateo County they switch everyone to the green/ 488.8875 and they usually last no more than 30 minutes unless , obviously , they catch the perp. officers posted along 101, 280 , 380 and some places on El Camino. they can do countywide Code 666s or they split it up by South,Central and North County.

Got a hit on my Pro-83 of 413.0 at 237 / Mathilda in Sunnyvale. Sounds like security, so I'm guessing Lockheed? I thought they were trunked, and this is conventional. "Sierra-#" are unit ID's (Sierra-1, 2, etc), they were doing a exercise, discussing "making sure no one enters or exits the SF office" and "confiscate the computer equipment". They ended each transmission with "Exercise, exercise, exercise" which led me to believe either it's a drill, or I'm hearing the frequency used by the President's Council for Physical Fitness....

I looked up the link I had for the FCC's database search, <http://wireless2.fcc.gov/UlsApp/UlsSearch/searchLicense.jsp> but can't seem to find how to search via frequency..

Thanks.

Evan

Sounds like black bloc to me. They don't protest, but rather just show
up at protests to cause trouble.

Yeah Gary , does fit their M.O.

btw , channel 2 with " breaking news" just now. Mans body found in an upscale apartment building at 5000 - 3rd st in SF. they say the building is owned by and one apt is occupied by .....Richard Hongisto, former Sheriff of SF . He is was Police Chief for awhile. they wouldn't confirm it was him. They are calling it a heart attack. I wonder what prompted channel 2 to roll on a heart attack call. Guess someone at KTVU must have recognized the address as Hongistos'. I am a bit surprized he would like there. its in the middle of a real tough neighborhood.

http://www.indybay.org/
It turns out that this protest has been in the works for a while and would be independent of who was selected as President. However, I don't think Kerry would have been burned in effigy.

There is a protest scheduled for 6PM today in Livermore.
Corner of First St. and Livermore Ave at the Fountain.

my friend at KRON is saying it is R. Hongisto and you are right he was the Sheriff and was in charge when SFPD stop doing the city jail (now CJ-6),
He was also the Chief who took all of the Bay Area Reporters Paper off the racks when it publish a photo of him with a nightstick hanging out of the front of his pants, I think he was running for mayor at the time

I'm not defending them, but any of a number of reasons. Perhaps they called in sick to work, and don't want the boss to know they weren't at home with the flu?

There have been many occasions where during demonstrations in SF gang groups will take advantage of the crowds and use it as an opportunity to cause havoc or just rob or beat people.

A number of times I have heard H-30 overhead watching various "gang" groups.

33294. 211 armed robbery Dredit union Dublin

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-11-04 22:21:31 UTC
From: collin
Topic: 33294 Message: 33294

About 30 ago 2 BMA robbered the Credit Union in Dublin. Fled in an older 70's style buick with a broken rear passenger window. Ok this is where it gets tricky, Dublin units, did a search of the Area and one witness said the vehicle looked as if it went WB on Dublin blvd. Then after about 5 mins. A "Dare" Van from Pleasanton reported he was possiblt following the vehicle up the Dublin grade on WB 580. Also at the same time an "I" unit from Alco (undercover) said he was following a possible suspect WB 580 near castro valley. As it stands now Some units (Pleasanton dare van included) are doing a stop on this one possible at Winton and 880 near southland mall. The other units including a very confused CHP are following or trying to find again thier possible suspects around foothill and Macarthur in Oakland.All this is on Alco TRS/Pleasanton TRS

Alco S.O./Dublin: 16048
CHP Dublin 42.620
Pleasanton PD 16048
Now updates from CHP on 37.140 that The one suspected vehicle is now lost in Oakland at 106 and Voltare. also Units have the others in custody in Hayward, not sure if this is them, but the units from Dublin lost the other guys in Oakland. Units now responding to the residence that the plate comes bacj registered to on Walnut st in Oakland.

When they stop the car they'll perform a "high-risk car stop". Everyone get taken out of the car, one at a time at gun point. Depending upon how many occupants there are,it could take quite some time.

Hi all,

First of all I apologize for the off topic post but I'm in a very tight situation and need to work all of my resources.

I am a Network Administrator\IT Guy\Desktop Support Specialist with a 14 year background not to mention my radio communications skills etc. and I really need work. I live here in San Rafael\Marin and am willing to commute a reasonable distance for employment. I also do home PC\Network setups on the side at reasonable rates.

If you might know someone that might be interested in my services please contact me off list and I will send you a copy of my Resume.

Thanks very much,

-Roger

Is this a GRE or Uniden sourced radio? I'm not sure I've seen the notion of "sub-banks" before (check out the user's manual in the previously posted link to the FCC approval info). I feel kind of ripped off that a $600 radio (796D) only has 100 talkgroups per bank. I hope Uniden wakes up and becomes more creative in some of their newer offerings. Even the 898 looks like it has 150 TG's per bank, and that's only a $220ish radio.

the 898 has 100 talkgroups per bank. As far as being ripped off by the 796 ?
you KNEW that it only had 100 per bank right ? or you SHOULD have before
buying it. It also has digital which greatly increases the price to any scanner. I
paid $516.00 for my 796 NOT $600.00 These scanners are planned well ahead
of time and take a lot of R/D and just like PCs, need to be upgraded from time
to time. Uniden has the BC246T coming out THIS month which has been
discussed on this board before solving the 100TG per bank situation.

as i remember this evaluation is is part of the neurological assessment performed during a physical exam... means that a patient is "alert and oriented" ("A&O") as to their
1. person
2. place
3. time, and
4. date

so, someone who met all the above criteria would be A&O x 4...

Very close. It's actually alert and oriented for person, place, time/date, circumstance.

(We aren't doctors, but we play them on TV ...)

> scanning and Stocking?
>

Good question...I'd like to know also how the battery life is on it...

And Brian, how do you get long lasting battery life on your Icom R-2?
Mine burns through batteries pretty fast. Funny thing is though, that
after I change 'em out, I can still use the batteries in other devices and
they still have enough juice, just not enough for the R-2. I recently
switched over to Maha NIMH's and have been having better luck
with those....

Later,
Todd....

OK, Ron Reagan didn't throw Kelty in the slammer. However, he did make
the IROC classified.

There are many "published" federal frequencies, but most have to be
acquired by scanner enthusiasts doing a bit of sleuthing.

I'll toy around with it and see. So far, it's been on most of today. I'll give it a full charge with the batteries outside the radio (a real full AA charger), then turn it on tomorrow morning and see how long it lasts.

FYI - it's getting hits of 411.XXXX from my 800 mhz trunked HT from about 15-20 feet away. No, the 800 mhz radio isn't transmitting.

EDMUNDSN IC - South Santa Clara County - Morgan Hill

1570 Edmundson at Brewster

MUTUAL AID REQUEST FOR THREE ADDITIONAL ENGINES FROM SANTA CLARA COUNTY

This is for a structure fire with explosions - fire being handled by CDF

Current assets working this fire are:

ENGINE 1
ENGINE 2
ENGINE 3
COUNTY ENGINE 12
WATER TENDER 2
BATTALION 1605
PCF ENGINE 102

Second Alarm has been called for three additional engines from Santa Clara County Fire.

UNITS RESPONDING:

ENGINE 13
AUXILIARY ENGINE 61
ENGINE 172

Frequencies to monitor:

CDF-Morgan Hill: 151.445
Santa Clara County Fire: 154.250
CDF TAC 9: 151.385

-Craig-

CORRECTION - GILROY ENGINE 61 has been dispatched to the Edmundson incident.

IC just advised CDF Morgan Hill that the fire has been held to a trailer and vehicle and explosions have stopped.

This will be the last update unless conditions warrant.

BOL put out - suspect shot an ex-coworker at 600 block Wolf Creek Road in San Jose. Suspect vehicle is a late 90's model black full size pickup truck, lowered with rims. I'm not sure the legalities of giving out the suspect's name, but his DOB is 11/13/71 he's hispanic, 5-7 - 5-9 wearing navy pants. The weapon, I believe a shotgun was located at the scene.

NFI.

I was using the search mode on my BC 780 and up popped 17328,
seemed as if it was a car-car type channel. One unit informing
another that some Marines were doing some "urban warfare" type drills
near 8th and cromwell?? Not sure where this is located, He was saying
that they had a camp set up there and were going to be firing off
some blanks thru out the night. And that there are armed Guards
roaming the parimiter. Have not heard anyhting since on this TG.
can't find anyhting listed on Radio reference.

WAKE UP YOU GUYS !!!

check www.firedispatch.com and click control 5 for fireground traffic

Calling fire under control now. main fire building is Flavor of India restaurant , fully involved with total roof collapse. one exposure is Shooters bar , probably also total loss . not sure of other exposures but a 3rd business is also burning.

Trucks 9 , 13 and 28 all had ladder pipes working at one point.
here is a list of units (most) that went on this fire

RWC E9 - 10 - 11 - 12 T9 Breathing Support 9 BC 3(IC) BC3B(PIO) and I am sure other BCs from RWC
Menlo Park E3 - 4 - 5 - 77 Truck 1 BC1
South County E 14- 15-16 Truck 13 BC4
San Mateo County E17 Breathing Support 17
Foster City Truck 28
San Mateo City - E 23 - 27 Truck 21 BC5
Woodside BC2
leaves one Engine missing , I am thinking it maybe Foster City E28 , but 29 is covering Station 9 so ???

Female at Sunnyvale Baylands requesting medical assistance.

She's 80 months pregnant.

There's an urban legend here, I'll try and dig it up. Not for the sqeemish though.

Well, first, 80 months would mean she's.. uh-oh.. I don't like 80/12. :)

Second, if your daughter is 25, you'll be dealing with "Hi Dad, this is my
date for tonight!" as someone with more piercings than a pincushin shows
up. :)

The craiglist promo is because there must a few people out there like me - computing for a year, and did not know about craiglist.

Free to post what you are selling, and much more. I only found out about it because I called two local colleges when I was going to sell my car, wondering how to let students know of my perfect-for-a-student car for sale. (A 1997 49 MPG Geo Metro with only 60,000 miles on it). San Jose state told me nothing. I then called Cal Berkely, and got a student help section, and she told me about craigslist. I easily sold the car after posting it on craiglist, and to a non-student too.

So the thing is I had no idea there was a place to post or read local jobs, stuff for sale, etc etc. My few friends had no idea either. So now everyone reading this is aware of it.. Maybe caught 1 person??

Well, at a training for first responders to bomb threats I received about a year ago several of our bomb techs (SCCSO) told us that because of the massive amount of RF energy being transmitted anywhere in the Bay Area that a 'spirious emission', strong enough to detonate a radio controlled bomb would probably kill the guy who placed and then armed it. However, they told us still NOT to use our radios or cell phones. There are no guarantees.

yeah, makes sense.....tell ya a story about the subject

In the mid-70s I worked Security on Graveyard shift at Bank of America World Hdqts , 555 California in SF. We received Bomb threats ALL the time , mostly day shifts . we had "procedures" we normally ran everyday , threat or not. Late on weekend, around 1am , we found an empty TV box on the plaza near Kearny/California. I was Supervisor on Friday and Saturday nights . again, we got threats all the time. we called SFPD and the first thing the officer did was had me turn off my HT. He told me story of how he received a call once from an " Little old Lady" in North Beach of a " bomb " in a box on her doorstep. He told her " lady , its nothing , I am sure " and ripped open the box to find several sticks of dynamite wired to an alarm clock..... HE ALWAYS TOOK BOMB THREATS SERIOUS after that (and changing his underwear) LOL

the TV box on our plaza was empty

You don't design a bomb to trigger at the mere reception of RF energy. Rather, you design the system to go off when it receives some predetermined signal on the carrier. [I worked at a company that did "fuses" for the military, where fuse is generic term for all the electronics involved in triggering the bomb.] One fuse I recall used 3 specific tones at a certain "twist" (relative signal level) to arm the bomb. That was in the dark ages. I'm sure everything is digital now.

There is some concern that if you get enough RF energy, the bomb will go off by energizing the primary detonation device. The classic example is the blasting cap, where the wire can act as an antenna.

Hello all.. housecleaning has found a bunch of antennas.. Mostly scanner antennas, however a few transmit antennas.

I'd like $8 plus shipping each. Let me know if you want more than one, I'll figure out something. If you want a better photo of one, let me know too. Some I have labeled as simply "BNC" meaning I don't know what band they're for - it may be obvious to you if you've seen it, but I'm not sure.

There's a picture of them at <http://www.espphotography.com/antennas.jpg>

Ok, put full batteries in around 8 AM this morning. Right now, 10:41, it's
starting to say low battery. Maybe I DIDN'T put in full batteries. I
definitely will tomorrow. :)

in the early 90s when I worked in NYC, one morning there was a
suspicious box outside our building. they roped it off, brought in the
bomb guys, and hours later, eventually they opened the box.

there was a human head inside. eeew.

Thanks to those who sent messages of condolences regarding the death of my wife, Jean. She died at age 60 after a 15 month battle with leukemia. Her memorial service was today (Saturday) and was very beautiful and peaceful. Many representivies of my department were present and SAR teams from across the Bay Are sent representives as well. A special thanks to Nina Zhito, who I had the good fortune to meet through this list, and has been a great friend.

Like my most spouses or partners, I suppose, Jean tolerated all my scanners but never really liked all the chatter. If your spouse or partner is like Jean, turn the scanners down for a bit and give him or her an extra special kiss today. Life is very short and it's easy lose track of what's really important to us in real life.

Regards, Jim

Being that slow on the list this morning, lets try this.

This is an unusual paragraph. I'm curious how quickly you can find out what is so unusual about it. It looks so plain you would think nothing was wrong with it. In fact, nothing is wrong with it! It is unusual though. Study it, and think about it, but you still may not find anything odd. But if you work at it a bit, you might find out. Try to do so without any coaching.

The letter "e", which is the most common letter in the English language, does not appear once in the long paragraph

Greetings all --
I am trying to monitor SF fire on my 250D and do not seem to be receiving the initial dispatch. However, I am receiving the units going on scene and other traffic on all of the talkgroups that I have programmed. I programmed using info from radio reference.com. Do they dispatch only on a specific talk group?
Thanks for any info you may provide!

Norm

Two different ways:

1.) Put it in closed mode and just use the one talkgroup (although they may be bringing on other talkgroups and you will miss "catching" them this way.

2.) Just hit L/O whenyou here something you don't want in the "open" mode.

Funny, I noticed that it never uses the word "the", an extremely
common English word. I didn't make the connection with the letter "e"
though :-)

I wasn't going to spoil it since I had heard it before..

There is a book called Gadsby by Ernest V. Wright. Written in 1939, the
letter "E" doesn't appear in the text. IIRC, it is online somewhere.

I'm having the same trouble. I have a PRO-2066 and thought I missed something. Went over the talkgroups and double checked Kelty's book. Still no intial dispatch. Sometimes it comes over the radio but mostly no dispatch. My guess is they are dispatching by pagers or over their PDA's. The other guess is they are using MDT's (Mobile Data Terminals)

No luck here! I have both of those groups and still no dispatch. Are you picking up the initial dispatch today. I don't think it makes a difference but I'm in San Mateo and the signal is fairly weak (3-4 bars on the strength meter), although, the volume is strong and relatively static free. Are there any radio settings I should check (I_CALL, Delay time etc.)?

thanks

33395. Anyone need 2 7 pt star badge wallets?

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-11-07 22:34:51 UTC
From: Evan Platt
Topic: 33395 Message: 33395

Well, housecleaning again..

2 leather badge wallets for a 7 point star badge. Scan available if you'd like.

1 is a badge / ID only wallet, with felt flap to protect badge.
the other is a 'undercover' badge wallet. Flip it open and it looks like a bi-fold wallet - 2 slots for credit cards on the left, and 4 slots on the right for credit cards / ID's. Flip the left panel open, and you have your badge exposed in the middle, and your ID on the left. The felt covers the ID but when closed protects the badge. Both could use a little leather cleaner and some TLC. Been in storage for a while.
$12 including shipping, or we can meet somewhere near Sunnyvale so you can make sure this fits your badge.

bay city news advises that that yesterday's five alarm fire caused an estimated $1.5 million in damages, and appears to have originated at shooters bar, in the 2400 block of broadway.

two businesses, shooters, and flavor of india were completely consumed in the blaze, which more than 60 firefighters contained in about two hours, according to a statement made by battalion chief geoffrey balton today. altho both buildings are still standing, their roofs have caved in. a third business sustained smoke and water damage.

the cause remains unknown, and investigations will include scrutiny by the ATF, because the fire caused more than $1 million in damages...

33399. Marin System - Latest Talkgroups?

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-11-08 04:10:21 UTC
From: adamsjeffg
Topic: 33399 Message: 33399

Has anyone been updating the spreadsheet that Ed sent out some time ago? I only occasionaly listen to Marin, but here's a list of talkgroups that I saw appear over the last two weeks (unfortunately I have no idea who/what they are) - all values decimal:

16 (mostly noise)
5232
37168
45600 (just tonight)
46928
53072
57168
745616 ??? Not sure what it means when there are 6 digits displayed

Anyone else been trying to update the list or have any idea on any of the new groups? None of the above appear on radioreference...

Thx,
Jeff

SONOMA COUNTY
Stuck, with stolen fire truck, man finishes binge in the mud
Sunday, November 7, 2004

When Claud Gipson-Reynolds got his fire truck stuck in the mud along a rural Sonoma County road Friday, he did what anyone would naturally do: He called for a tow truck on the engine's radio.

The problem was, the intoxicated Gipson-Reynolds had just stolen the fire truck, crashing through the fire station door, to try to push his car out of the same mud.

Instead of a tow truck, dispatchers sent the California Highway Patrol to lock him up.

"I could probably get on that show, 'World's Dumbest Criminals,' " a chastened and sober Gipson-Reynolds, 36, said Saturday from his Santa Rosa home after bailing out of the Sonoma County jail on charges of vehicle theft and drunken driving. "I was pretty intoxicated at the time. My thinking was not the best."

Gipson-Reynolds said he had been on a two-day drinking binge following a fight with his wife when the clutch of his 1983 Chevrolet gave out. He ended up stuck in the mud on Cavedale Road, a windy, one-lane street about eight miles from Glen Ellen on the ridge between Sonoma and Napa counties.

According to Gipson-Reynolds and the CHP, he broke into the nearby Mayacamas Volunteer Fire Station looking for a phone.

"It wasn't wide open but the garage door was not very secure," he said.

When he couldn't find a phone, he took the truck -- described as a small, four-wheel drive with ladders, water and first-aid equipment -- and drove straight through the station door. Gipson-Reynolds said he thought he could free his car, then drive the fire truck to a pay phone to call a tow truck.

"Unfortunately, I drove the fire truck off the road about 20 feet from my car," he said.

Two passers-by stopped and Gipson-Reynolds told them someone at the fire station had loaned him the truck.

When police and firefighters arrived, they found Gipson-Reynolds' car full of beer bottles and Narcotics Anonymous pamphlets.

"I've been in the fire service 43 years. This is the first time I've ever heard of anything like this," said Mayacamas Fire Chief Gene Reed.

Despite damage to the fire station and the truck, Reed said he's just glad nobody was hurt.

"I'm not too angry. I'm more amused," he said.

As for Gipson-Reynolds, he said a night in the drunk tank is enough to convince him he needs to get help.

"If you think you might have a problem with drinking and drugs," he said, "you should seek recovery before you hit the point of no return."

33408. SMC sheriff freqs?

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-11-08 17:23:19 UTC
From: seyfer
Topic: 33408 Message: 33408

Hello,

I was wondering if anyone had tried to tune in to San Mateo
County sheriff's (bailiffs) frequencies to hear the movements of the
sequestered Scott Peterson jury.
There are something like 21 bailiffs assigned to watch these
people at all times.
If anyone has checked into this, can you tell me which
frequencies worked?

thanks!

21 Bailiffs? How many people are on this Jury? That's, what, a 2:1 ratio?

Unless (I HOPE) that's like all of them - 24 hours a day, 2 12 hour shifts,
etc..

~>12 hour shifts,
~>etc..

Don't forget about the alternate jurors. They could have 18 or more jurors total. However, only the 12 primary will be in deliberations.

My guess is that only one, maybe two, bailiff(s) is/are assigned to cover the jury at any given time. This allows for days off, sick days, etc.

At least that was how the Stayner trial was done here in Santa Clara County.

Mike

Yeah it's my understanding that the bailiffs are working in shifts. The poor alternates have to be sequestered too and they don't even get to do anything. I'd love to hear what evidence the jury wants to see, because that might show what they think is the most important part of the case.

I'd think that it would be 7 in 3 shifts, or it could be 21 slots, with deputies rotating in and out during the week for different reasons. I seriously doubt that they're pulling 12 hour shifts.

Started with Hayward CHP, SB 680, then on to SJ CHP. Pursuit went NB 280 to SB Hwy 17 over the summit in Santa Cruz. Spike stripes at Granite Creek.

12:50pm ----- CHP doing felony carstop. Don't know if CHP airship is above but I do know KNTV copter is there. Look for feedtape at news @ 5pm.

33422. FBI: 132 police officers killed in 2003

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-11-08 22:05:28 UTC
From: Robert W. Sanford
Topic: 33422 Message: 33422

I thought I would pass this along to the list. I find it interesting that more officers were killed in traffic accidents versus firearms..

FBI: 132 police officers killed in 2003

WASHINGTON (AP) -- The FBI reported Monday that 132 police officers were killed in the line of duty in 2003, with guns and traffic accidents claiming the most lives.

Of the total, which is eight deaths more than in 2002, 49 were killed in traffic accidents and 45 slain with firearms. Thirty-one of those killed with guns were wearing body armor at the time.

In all cases, the average age of the officer killed was about 37 and average level of police experience 10 years. The totals translate into one officer death every 2.8 days nationally, the FBI estimated.

Authorities solved all the cases in 2003 of officers who were shot to death or otherwise intentionally killed. Thirty-eight suspects were arrested, 14 were killed by police and six committed suicide, according to the FBI.

About half of the officers killed intentionally were making traffic stops or arrests. Ten were slain while investigating disturbance calls, and nine were ambushed.

Twenty-eight of the 52 intentional killings and 37 of the 80 accidental deaths took place in the South, by far the deadliest region.

In addition to the officer deaths, nearly 58,000 officers were assaulted in 2003 while performing official duties, with more than 16,000 suffering injuries. Eight out of 10 of these attacks involved hands, fists and feet.

The report was culled from information submitted by more than 10,000 state, local and tribal law enforcement agencies.

Hi guys,

I just wanted to introduce myself: My name's Inigo and I'm a 16 year old high school student from Marin County. I've been scanning VHF airband for a while because I'm a student pilot, but I bought a PRO-93 a few weeks ago and I'm hooked. Unfortunately I can't recieve MERA (I didn't know what Motorola ASTRO was at the time I bought it), but I'm still very interested in learning more about public service frequencies in my area and hopefully I'll be able to get a Pro-96 (or the Uniden equivalent) in the future when they aren't so ridiculously expensive. :) Thanks to Robert for letting me join. Your group has a wealth of useful information and I appreciate the chance to be part of it.

-Inigo

P.S.-- If anyone's curious, I'm in the town of Fairfax. I don't know if anyone here monitors the Fairfax PD talkgroups on MERA, but I know a few of the officers and I have a hunch their dispatch and TACs can get pretty entertaining. :P

welcome to the group Inigo!

you'll find that we're from a wide array of backgrounds and the age range is fairly wide. some of us only have one scanner, others a wide array of gear (and lots of it). i'm willing to bet you're our youngest list member though.

be sure to read the FAQ, but don't hesitate to ask us questions. once in a while you might get 10 different answers, but the truth usually prevails after a few hours (or days).

enjoy...

perhaps old news to you all...

==========

following the loss of one of berkeley's two night-time fire truck companies, firefighters will protest at city council november 16, according to bay city news service. the lost company covered 6 pm to 8 am, and also included a hazardous materials team.

the cut was recommended by berkeley city manager phil kamlarz and was approved by berkeley city council in a 6-2 vote on october 5.

a citizens' group "berkleyans against soaring taxes" (BASTA) is spearheading the effort to return the truck company to service.

Put in full batteries Sunday morning. A little scanning, a little on just
one channel, no signal stalking. No low battery indicator by Sunday night,
but by Monday morning, it was dead.

Not much you can expect from 2 AA's. Keep a spare set handy.

Evan

IC asking for a total of 4 Medical Helicopters requested to Newell & South Broadway.

Contractors broke a gas line. Explosion and fire, with smoke inhalation victims.

Related fire, 2053 Doris - Fully involved structure with a partially
involved exposure. Audio is choppy (had a problem with my player) but
they're setting up a LZ for 4 helos. I believe it was at a soccer field.

Just saw the live shot on KPIX - flame heights of well over 50 feet and massive amount of black smoke.

Fire units look to be attempting to put water on everything in the immediate vicinity. Other than that, and since I have no real experience with a gas main rupture and explosion of this size, I will avoid any comment on the apparent progress being made on this one.

Also, just heard that four victims transported via air and one by ground.

Watching KTVU-2 right now and they're calling it a petroleum pipeline that was ruptured and ignited - not a natural gas pipeline (this is per a PG&E spokesman). PG&E confirms that it's not their equipment involved. Smoke color indicates that this is not natural gas.

Looks like one home suffered serious damage and one big rig was incinerated. There is still some secondary smoke, but nothing like it was 30 minutes ago.

Last post from me unless events warrant.

I missed a few minutes as I had to take a phone call, but I initially heard a call for a T/C with rollover, vehicle on its top "no wheels on the car"... and just when I got off the phone, extrication complete, and vehicle estimated speeds in excess of 100 MPH.

3 words: Just plain stupid.

There's no reason to be going 100 MPH - unless you drive for NASCAR.

Or United / TWA / American Airlines in a company.. ahem.. vehicle.

Or Dominoes.

Oakland Gets New Crowd Control Policy

Police Disperse protest at the Port of Oakland
Posted: November 9, 2004 at 11:58 a.m

OAKLAND (BCN) -- Oakland Police Chief Richard Word and City Attorney John Russo today announced a new crowd control policy that's being praised even by some activists who have been critical of the city's police officers.

Joining Word and Russo at a news conference at Oakland City Hall, Alan Schlosser, legal director of the American Civil Liberties Union of Northern California, said, "Oakland becomes the first city in the country where demonstrators will not have to incur the risk of serious injury as the price of exercising their First Amendment rights to protest and assemble."

The new crowd control policy is the result of 10 months of discussions between Oakland officials and attorneys for 52 people who are suing the city, claiming that their rights to freedom of speech, assembly and association were violated when Oakland police opened fire on an anti-war protest at the Port of Oakland on April 7, 2003.

At least 58 people were injured during the protest when police fired large wooden bullets, sting ball grenades and shot-filled beanbags at protesters.

The new policy prohibits the indiscriminate use of wooden bullets, Tasers, bean bags, pepper spray and police motorcycles to control or disperse crowds or demonstrations.

Russo said he's "proud" of the agreement because it shows that Oakland "upholds its commitment to keep its constitutional promises" to protect free speech and the right to protest.

Russo said, "Bad things can happen in Oakland, but we try to learn from them and not bury

Monitoring Milpitas FD(Not sure of the frequency, I believe 460.5), caught tail end -
"Did we ask PG&E to expedite?"
"Affirmative."
"Well, if they're expediting, they're doing a bad job of it. Can we get an ETA please?"
"Will do."
"And please reiterate to them we have two people trapped in a car with a downed wire on the car."

PG&E just advised 15 minute ETA.

They need lights & sirens and be allowed to use them if allowed by PD. Won't happen.

I should clarify - No FREQUENCY display. But my two-ways do have alpha. So for my 800 mhz trunked radio, I may have non standard alpha tags for AlCo. So the standard talkgroup name may be "PD TAC 3B" but I may have it as PD 2. But not a big issue for conventional. There's usually only 3 or 4 frequencies max - i.e. Palo Alto PD has channel 1,2,3,4. Sunnyvale has Fire, PD, and PD tac and FD tac. No brainer there.

its more than them needing lights/siren. they are way too under-staffed ,
that is the real problem. the ability to use code 3 equipment would be helpful
however. they (powers - to- be) COULD set it up with code 3 training for their
people. SF Water Dept is code 3 equipped.

OK, I'm not clear on this...is the only way the radio works at picking
up near field transmissions is that you have to have it in "Stalker"
mode where it cuts out every two seconds?

Or can you just have it in near receive mode?

Bill

It's like priority scan on most scanners. You'll hear the channel you're
listening to, and every 2 seconds, a short 'mute' while it scans for a
local signal. You can also put it in signal stalk mode, where it simply is
looking for a signal and not monitoring any channel.

> Or can you just have it in near receive mode?

You mean just like a frequency counter / receiver, not monitoring a
specific frequency? Yes.

Evan

Bill:

You can put the radio in signal stalker mode only and it'll tune to nearby transmitters, and you can lockout unwanted freqs like pagers, etc. I don't plan to use the Signal Stalker feature while scanning because it is very annoying when it cuts away briefly, you can miss a lot.

I had it with me on Monday when the Walnut Creek pipeline explosion happened. It picked up the helicopters, police and fire, news media, and all kinds of other traffic. I had another radio in the car that scanned the usual frequencies and the Pro 83 was great for filling in the gaps. I had several occaisions where I could see personnel on handhelds and within seconds the radio would pick up the transmission. I finally figured out that you can save a frequency that it captures by pressing the function key, the program key and then enter, and it saves it in an emtpy channel. Kind of clumsy, but it worked. I got one on sale for $55.00 at the Pleasant Hill Radio Shack, and so far, it's well worth it.

OK, I'm not clear on this...is the only way the radio works at picking
up near field transmissions is that you have to have it in "Stalker"
mode where it cuts out every two seconds?

Or can you just have it in near receive mode?

Bill

Yes, they have a few converted Engines from SFFD to SFWD. But I have seen them come in code 3 in smaller rigs as well in the past. There is no logical reason that PG&E emergency crews could not go thru code 3 driver training and have the trucks code 3 equipped. But first, they need to fund those crews. and they DO have the money.

PG&E paid out 60+ Million in bonuses TWICE to some who were working on their bankruptcy problems. That's 120 MILLION in BONUS money that could have been spent much more wisely.

its no wonder we hear things like Evan heard and I have heard with Battalion Chiefs' about to go ballistic over their ridiculous SLOW response.

Perhaps 165(f) of the California Vehicle Code offers a clue:
"Any vehicle for which an authorized emergency vehicle permit has been issued by the
Commissioner of the California Highway Patrol."

Section 165 also lists several other criteria that must be met to consider a vehicle an
"emergency vehicle". It does mention vehicles used in "repairing damaged lighting or
electrical equipment." But they must be owned by the State, bridge, or highway district.

Perhaps the government just doesn't see it necessary for PG&E to have emergency vehicles?

And not to beat a dead horse, but I had another thought: is "Code 3 driver training" actually regulated? Or is it simply given by the employing agency, meeting criteria that they deem necessary to teach?

From what I recall, when my EMT cert was valid, all I had to do was pass a written test and I would be certified to drive an ambulance--I already had a commercial license. I never applied for the cert. But there was no mention of any formal driver training.

Heck when I was dispatching in San Mateo County I and the other dispatchers actually had to go through the Emergency Vehicle Operations class. We had to along with the Paramendics and EMT's and Fleet Service personal had to take the class. The reson behind it was if a disaster hit we would need everyone to drive. It was done at the old Fashion Island shopping center parking lot. We almost had to do it to in reality cause just 2 months late the 89 Quake hit.

No, AFIK it is not regulated. However, responsible agencies who value their budget (and their legal staff's time) have a policy where all drivers of emergency vehicles have received training (both classroom and behind the wheel) on a regular basis.

I, too, found the packaed Bearcat software next to useless, and difficult to use (if I've read correctly between the lines...)

I tried a few. I found Scan Control, and I like it a LOT! It was the only one worth the money (so far). It makes it simple to import info from many different list/spreadsheet formats. :-)

I think the Scannersoft website is a bit hard to read through, but the screenshots (http://www.scannersoft.com/screen_shots.htm) tell much of the story. If it looks interesting, try the demo. Once I did that, I was hooked, and bought the full package. I've had no regrets so far. (There have been a couple bug fixes and one major upgrade in the past 6 month, and they have a yahoo list for support.)

ScanControl finally helped me make use of all of the features, and put useful alpha tags and PL tones in all of those frequency slots!

Why not? Their patrol deputies (and dispatchers) work 12-hr shifts. It is unusual, I grant, for the bailiffs to work such hours, though.

FWIW, the vehicle code used to have a section that permitted public or privately owned utility company emergency vehicles if their primary use was responding to situations imperiling life or limb due to downed wires or gas leaks. I don't know when this provision was removed from the vehicle code but PG&E used to have code 3 equipped troubleman trucks until about 15 years ago so they could respond rapidly to situations like that in the accident in Milpitas. I don't know when or why the law was changed but I do remember the troubleman trucks having the red lights replaced by amber during that period.

Regards, Jim

Yeah. Use software! ;-)

To manually do it, use these steps. (Note: it's the same for either "Uniden Digital Capable hand held". Note 2: Steps are for ~after~ trunked system has been properly set up.)

Press <MENU/BACK>
2:SCAN OPTION
2:TRUNK
(Select the bank of the trunked system)
3:TALK GROUP
(Select proper ID list)
1:ID
(Enter the ID)
2:ALPHA TAG
(Enter the Alpha Tag)

Do this for all ID's

From: Mobile11@aol.com
Topic: 33494 Message: 33501

It's very hard to do.

The person or Robot may get on the list spam and get off. So, there is no time to check before it happens. I have had few that have spammed and weren't even on the list. I can't figure that one out.

PY

I already deleted the original spam, but it's probably worth forwarding it
to Yahoo and asking them how the &*#$ did that person spam your group. :)

33503. RE: [bayscan] Alpha Tags

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-11-12 19:10:19 UTC
From: Roger Strohmeyer
Topic: 33489 Message: 33503

Hey Robert,

Assigning Alpha Tags using the little orange wheel on the 296 in a pain in the butt in my opinion.

As I think Nina mentioned on the list assigning tags etc. is a breeze using the Butel software. The whole scanner programming experience is just so much better being able to use a PC\Laptop.

My 2 cents,

-Roger

Subject: [bayscan] Alpha Tags

Hey does anyone know the EASY way to assign an ALPHA tag on the Uniden Digital Capable hand helds??
This is for the trunking mode of course.

I read through the directions and attempted it a number of times with no luck.

I know once I get it, I wont forget.

I HAVE THE MANUAL BUT YOU KNOW HOW THAT STUFF IS....

Thanks for the answers in advance.

I have to approve the members on my list before the join and i've never
had a problem of them getting past that process. So i'm confused.. are
you saying they are morphing to another email address after they get
into the group? :-\

You need to make sure that the group is set to only accept messages from members, and not everyone. If it's set that way, and the messages are getting through, then there's a problem with Yahoo.

That's what I'm seeing on Channel 7 Online.

Maybe I'll take a drive up there to see if I can get in the courtroom.
Parking shouldn't be a problem.

</Sarcasm>

Anyone have good media frequencies ?

Take a look at abc7.com 's live feed - during 'commercial' breaks, there's
some audio but no video, and it's audio from the courtroom.. "Our guest
here needs to be miked.. get him a mike!"

Seriously! Sheesh - can't be more wrong.

Count One = 1st Degree Murder - GUILTY
Count Two = 2nd Degree Murder - GUILTY

I am so glad this case is finally drawing to a close - it seems like it's
been going on forever.

Sounds like the entire Redwood City Fire Department is going code-3 on
something :^)

-C-

By the way - SJPD working a stabbing (in the eye) on SJPD channel 8 on
460.525.

That's just sick! ;^)

Is it just me, or is it kind of weird that people assemble in front of a courthouse to cheer a verdict, attorneys and families? Just seems kinda freaky to me. Oh well...time to get ready for the next media frenzy!

Good question, but I have no answer for that one, all I know is Clear Lake and Lakeport are in Lake Co.
The only reason I know that is because I deliver to the Safeway stores out there.

I worked with PG&E for 15 years and personally saw and worked with the guys who did emergency response. We had 6 code 3 equipped trucks that were stationed in various parts of the service territory. They didn't use them every day but they responded code 3 when they were requested by the agency that wanted them there pronto. The guys took the trucks home with them and were on call 24/7. Of course, those were the days when PG&E actually thought they had some responsibility to the public welfare.

Regards, Jim

Hey guys,

I heard the end of an APB and a reference to a Code 777 in Novato on Control 5: 45.64 (I think it's local gov't or public works or something, maybe someone could tell me if they know), and I just checked CHP Violet: 42.16, and they're all heading to their "code 777 locations." I'll post more as I catch it and all you Marin guys who know what you're doing tune in. ;)

Okay it was a 10851 (Auto Theft) on a Dodge Dakota pickup, maroon in color, CHP thinks a Sheriff might have found them in the vicinity of Lucas Valley and Freitas Prkwy, trying to confirm. I'm getting too much interferance on Control 1: 39.24, to check it out right now. And as I'm writing this it sounds like S.O. has subject on the ground at gunpoint with CHP enroute.

On Barbers point @ Main st. Apartment fire , 3 rooms going with extension into attic.

Oakland sending 3 Engines , 1 Truck to cover city

Tac 5 / 17648

Also, Berkeley Fire has browned out Truck 2272 from 2000 until 0800 hours.

Ed

33542. Sonoma Co. SO - Code 33

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-11-13 06:22:01 UTC
From: Nick in SLO
Topic: 33542 Message: 33542

Sonoma County Sheriff units are on a Code 33, sitting on some Parolee's, in the Corby & Baker area. Henry1 is en route. Suspects are wanted in a 211 that occured earlier today. One of the suspects just kicked out a window and know that the deputies have surrounded their house. A unit just requested Code 2 medical to stage.

453.7250 (131.8)

Code 33 on channel 1 (453.7250) has been lifted, units are Code 4 on Corby
with two detained inside the residence.

33547. [SJPD]415 Weapon Call District Nora

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-11-13 17:00:18 UTC
From: Craig
Topic: 33547 Message: 33547

Thought I'd post because of the recent activity this location had.

SJPD at 0857 just recieved a call for a 415 Weapon Call at Winchester Blvd and Payne Ave. in front of the Starbucks.

Side Note: For those who don't know the significant meaning of this place, SJPD shot & killed a man, whom to this date, the friends and family of the shooting victim clam SJPD wrongly shot him. This happened about a month ago.

Now as I just typed all that, untis advising Code 4.

EOM unless i hear any further.

Hi Craig and gang...

You were right - not a whole lot of action, but did get to talk trash with some friends out of Station 1 and Station 7. There was also a firefighter memorial event (annual ringing of the bell for fallen comrades) happening downtown that I had a chance to drop by and pay my respects.

At any rate...if anyone is interested, here are some apparatus shots just for the heck of it.

From: gr0g
Topic: 33572 Message: 33573

obviously this is too early, but any idea what type of system (other than the ambiguous title of 'digital' modulation) this is going to be? i'm also confused at this being the same 2 channels per site. mission peak is too high to create any sort of 'coverage contour' that would allow realistic re-use of the two channels within the county. not to mention, if it's trunked, they end up with one voice channel per location at best (again, provided frequency re-use could be attained, which i don't see as possible with the RF characteristics of both the site locations and geographical layout / topology of the county).

the only answer that makes any sense to me is that this is one of the newer 9600baud apco systems. i know P25 is capable of more than one voice-path per physical frequency, so that could be the answer. if that is the case, unless i'm mistaken, none of the current crop of scanners can monitor multiple voice paths per voice frequency in use, unless that's a function of the net-id?

can somebody that knows more educate me? is the net-id the only discerning factor for monitoring a single conversation on a p25 channel where more than 1 conversation is taking place simultaneously, or am i just missing something?

Latest information is 3 dead ..... a mother, teenage daughter and small child , about 5 died. Six addtional were transported to either SFGH , USF or other hospitals with possibly 2-3 critical and according to KTVU report at 10 , quite possible some may not survive.

According to witnesses , most victims in a Chevy Suburban that was possibly racing with another vehicle and the Suburban suddenly crossed all lanes of traffic to take the Ocean ave exit from Southbound 280 , hit a curb and rolled about 4 times . All 3 fatalities were ejected. at least 2 of those injuried may have been from other motorists who stopped to help and were cut by broken glass on the SUV.

/2004/11/14/BAG3M9RFFT1.DTL>SAN
FRANCISCO
Rollover on I-280 kills 3, including child
- <mailto:pyollin@...>Patricia Yollin
Sunday, November 14, 2004

A woman, her teenage daughter and a small child were killed Saturday night
and four other people were in critical condition after a vehicle rolled
over on the Ocean Avenue off-ramp of Interstate 280 in San Francisco,
California Highway Patrol spokesman Shawn Chase said.

The accident occurred around 7:30 p.m., Chase said, and forced the closure
of the off-ramp. It was still shut down as of 11 p.m.

Chase said the CHP received reports that a Chevy Suburban and another car
were driving recklessly on southbound I-280 around 7:25 p.m. Five minutes
later, the CHP was notified of the accident. Apparently, the Suburban
crossed all lanes of the freeway in an attempt to reach the off-ramp and
rolled over when it hit a curb.

The three people who died were ejected. Four others in the car, believed to
be teenagers or younger, were trapped inside before a Good Samaritan helped
free them. The identities of the victims were not released.

The four injured were taken to hospitals. The other vehicle was still being
sought.

Hey people! I am pretty new to the group and I don't mean to be annoying, but
I wanted to let all of you know I finally got my webcam back. It took a while
to repair, but everything is running great now, and the picture is crystal
clear. The repair guy also told me that he added some new software to allow
me to talk live to those watching me! So if any of you guys want to chat
come try it out on my new homepage :)

I was working when this happened it was to bad we (novato) didnt get
the car. SO did a good job though, it was actually a community
service officer who spotted the car. The victim had left the car
running right next to him as the suspect jumped in and took off.

33580. 3 Marin Questions

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-11-15 01:48:09 UTC
From: inigo4688
Topic: 33580 Message: 33580

Hey guys,

I was hoping somebody could help me out with these three.

1. First, even though I thought every Police Department in Marin switched to MERA by now, I put the old conventional police "zone" frequencies in my PRO-93 mainly out of wishful thinking, and didn't hear any traffic on them from my house during the last few weeks. However, today I biked the Loma Alta peak (the one directly across Lucas Valley from the two MERA towers on Big Rock Ridge, we were going to cross over and see how much of that area around the towers was public land but it got dark to early), and for the first time I heard traffic on Zone 1.

My question is ----> What is "Police Zone 1 / "Control 27": 39.88 MHz used for? Today I heard talk of several 10-15s on subjects along with something about deputies, but my friend got too cold up there so we had to leave. Is it So. Marin PD? If so, why aren't they on MERA yet? Is it Sheriff? If so, why another conventional besides dispatch and all their MERA TGs? Thanks for the help.

2. I heard recently (I think on this site) that TwinCities PD switched over to MERA, but I still hear their conventional dispatch (according to scancal.org) all the time on 39.80 MHz, along with mobile units. Any idea why this might be?

3. Finally, I managed to check out the San Quinton Prison (SQ) TRS very breifly. It's a Motorola Type I system and I was happy to see the fleetmap on radioreference.com worked fine ("E1P3" preset on the Pro-93, and the control channel is 860.2625 MHz for those who didn't know).
I heard someone key their mic on TG: 000-08, and
I heard another guy call "Control" on TG: 000-04 (or maybe 03), so I know there are a few active TGs here, but again I had to leave before I really heard anything interesting.

I was just wondering who uses this system? (I know San Quinton FD has its own VHF freq.) Does anyone have a list of known TGs here?

Thanks in advance for any help you guys can give me. I know it's a long post but I'd greatly appreciate any info you may have, even if it's only on one of these.

We natives don't pronounce the "e" Ed. We're too busy bitching about wanting them to close the place. :P

Thanks for the info, if anyone has talkgroup IDs for their TRS I'd be interested to hear. Also, if people can hear Twin Cities PD TGs on MERA my best guess would be they're still simulcasting on 39.80 until new equipment can be put in all their cars?

Topic: 33580 Message: 33583

They are simulcasting plus using the old radios in addition in Marin for
Sausalito, Mill Valley, Tiburon 39.880
Also Twin Cities on 39.800

Same thing goes for Marin Fire 46.500 and Woodacre Fire 37.100

In addition the Marin Sheriff on 39.240 are using the old system in
Southern Marin and the other units on the new system are just re-broadcast
on the old freq.

At some point the old low band frequencies will go silent but it might take
another year before they get the antenna site finished in Marin for all I know.

Hearing they are setting up a water shuttle at this point and the structure
is collapsing, but no exposure problems. Too late to head up there now -
sounds like this one is posing some water supply problems.

Thanks for the heads-up, ED!

yeah, someone with a camera going up (or down) 17 could probably got a few good shots.....BC3 said large loom-up enroute and called the 2nd alarm a good 3 minutes before they got there.

Engine 10 and Hazmat 2 also there.....

County Wide Road Block...

Police and Sheriff depts will go to "predesignated" locations to cover all the entrances and exits to the highways running through a county, ie in Marin they would cover the 101 stretch..

SJPD tracking the suspect at this time -

T-Tom activation with 10 bars at northbound 280 and Saratoga.

Suspect is an HMA with red hat, red and black jacket, driving older gray Toyota Corolla.

I don't recall a home depot there. There's an office depot a few blocks
south on.. Miramonte. But no Home Depot?

Evan

UPDATE - Sounds like the suspect may be on foot in the area of El Camino and El Monte near McDonald's.

Unit receiving the pack at 11 bars at the Rainbow West Motel (1905 West El Camino Real) behind the McDonald's.

Sounds like San Jose with Mountain View are going to set a perimeter at this point.

33607. SJPD 211/ "fox hunt"

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-11-15 20:30:18 UTC
From: IAPPS Director
Topic: 33607 Message: 33607

Vehicle possibly located El Camino and El Monte near the motel/ apartments.

Possibly in the apartment complex behind the McDonalds.

This would be comical if it wasn't so serious. They are working themselves into
a frenzy, radio discipline is completely lacking.

Reminds me of Citizen's Band Radio "foxhunts" in the 70's.

Another case for interoperability that didn't happen, but should have for officer safety.

SJPD chose to coordinate with Mtn. View on the phone via dispatcher, instead of direct officer to officer communications on BAYMACS.

460.475 SJPD 7
482.5125 Mtn. View

Make that 460.475 (Four sixty).475--the same freq as originally. Then again, maybe they don't have the car. It sounds pretty chaotic out there.

Did you by chance hear the SJPD supervisor mention that San Jose units can talk with Mountain View PD on channel 14? Is this 460.300?

Got one in custody off Rinconada Court.

What a cluster F+$#

SJPD 6 with hand packs is definitely NOT the channel to use
in Mountain View.

Now in Los Altos jurisdiction.

I heard position Delta channel 14, which I think is BAYMACS.

Both Mtn View and San Jose are stopping all kinds of similar vehicles. I'm definitely not going out right now. ;-)

It does sound like they may have found the vehicle. Talking about "money" and a pack on SJPD. Suspect on foot.

33630. Out of Space on BayScan

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-11-15 22:45:43 UTC
From: Brian C.
Topic: 33630 Message: 33630

Robert and Ed,

We are out of storage space on BayScan. I was able to upload the first 3 meg file but when I went to upload the second half of the 211 bank job from today the system came back stating we're out of space.

Yahoo gives us 20 megs and we're at 17.5 +/- right now. I think you guys will need to delete some files before any more uploading can be done. Technically, we've got +/- 2.5 megs left but we're real, real close.

Please advise.....

Brian in Campbell

I've got basically unlimited storage on my 'server' (my home computer with
a DSL connection). Right now it's 128k upstream, but in about a week, it
will be about twice as fast. I'm willing to donate whatever space we need.
Let's start putting more stuff up!

Yes, please encode into an MP3 (or OGG). For the low-bandwidth voice
audio from a scanner, you'll be able to compress it by at least 10x
without impairing the intelligibility. There's no reason to wase that
much disk space on Yahoo for just voice recordings, not to mention
how much faster it will be for group members to download.

33638. BART and Bank Holdup?

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-11-16 01:25:55 UTC
From: jjcooke@yahoo.com
Topic: 33638 Message: 33638

Anyone know the story of a bank robber that they tracked into the BART tunnel in Oakland using the bag transmitteer? I heard BART PD traffic about sutting down the line between Fruitvale and 19th to search of the bad guy but they didn't find anyone and reopened the line again about noon. I'm assuming the wasn't releated to the 211 in San Jose. I'm also suprised they could track the transmitter inside a BART tunnel.

Regards, Jim

Only outside of the US would you see the cops do something like that! And then we have those who think our police depts are too harsh. Just goes to show, if you break the law, the law will break you!

Topic: 33640 Message: 33640

Comments comparing what happened today to foxhunts on CB are ridiculous. Did you notice they CAUGHT the perp? Keep in mind, many SJPD officers are unfamiliar with Mountain View. They said going west on Castro which is wrong. Mountain View is the first town on the peninsula (running north to south) where many streets such as El Camino Real, are run in different directions...i...e.. In Palo Alto (north thru San Mateo County) El Camino Real is a north/south street and in Mt. View and south its an East/West Street. This can be confusing...I remember when I first lived down here it threw me off. the supposed lack of interoperability did little to hurt this event because SJPD had so many units in Mt. View quickly. Had Mt. View PD had tracking ability, that may have helped. The thing was over so quickly, messing around with changing frequencies wasn't necessary. Chan 14 which may well have been BAYMACS was mentioned and I would assume had the event gone on longer they may have switched.

For Chris---------- I am wondering what agencies in S. Clara County besides SJPD and CHP have tracking ability? What about lojac?

San Mateo County LE have numerous units with it as does SFPD.

33641. SFPD question

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-11-16 01:49:31 UTC
From: jjcooke@yahoo.com
Topic: 33641 Message: 33641

I went to the Niners game yesterday - I won't even discuss what a terrible experience that was. I did take my Pro-96 with me to confirm I had the right control channels in since I can't pick up anything from the SF trunk system even with a good antenna system up here in Petaluma. It worked fine at Candlestick..err..Monster Stadium so I guess I have it set up right. The stadium detail was operating on Safe Event 2 (TG 13615) and it sounded like they were operating on simplex even though the TG was being properly tracked. Is this possible or do they just have a weak portable repeater installed at the stadium? I was suprised at how weak the signal was and how quickly I lost the TG when I was more than about a mile away for the stadium.

Also, nothing against the SFPD since I'm sure they are a good force, but have they ever heard of keepers for their Sam Browne's? I've never seen so many cops with their Sam Browne's halfway down their pants. Does SFPD not allow the use of PR 24 type side handle batons either? Every officer I saw had the old wood nightsticks. I still have my LA-26 wood nightstick as kind of a memento of the old days but this is the first time I've seen them in current use in a long time.

Regards, Jim

An interesting note is that both of the robberies were at BofA.

And though the Oakland robbery involved a transmitter, apparently the suspect that caused the Bart shutdown, discovered the transmitter and either destroyed it or dumped it as they never found him in the tunnel.

SF is kinda of a " traditional" town. I never saw them with pr 24s either.

as for as keepers..... what was the average age of the officers ? I would
be a little older , I have seen plenty of SFPD guys obviously using keepers.
maybe they like the " old west " look ? LOL

not sure about the TG , they usually use Event 3 for Giants games at SBC
and I can hear them in EPA.

Did indeed, Ed. The brain was moving slower than my fingers. <g>

As for the officer's ages, it seemed to be about the same regardless of age. Some of them looked sharp but a lot them did seem to like the "wild west" look but, with all the junk you have to carry on your Sam Brown nowadays, things can head south pretty fast without keepers. :) I even saw one guy who had a revolver, something I haven't seen in years in any other department around here.

That's really strange about the lack of PR-24's. A lot of us now just carry the expandable batons and not PR-24's but I still haven't seen that many classic wood nightsticks outside museum in a long time.

Feel free (all) to download from my website:

<http://www.espphotography.com/fires/>

I'll be working on updating more stuff there. Some stuff obviously isn't
fires.

There's 3 files there relating to the 211 - the original 7 meg WAV, a LOW
quality less than 1 meg mp3 (low quality, but understandable), then a
decent quality 2.8M.

My upload is only 128k for now, but in the next week, that should increase.

Enjoy!

Evan

33659. PAR defined

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-11-16 19:42:25 UTC
From: IAPPS Director
Topic: 33659 Message: 33659

OK, I know this will be the next question.

Here is a link to PAR definition as used in firefighting:

http://216.239.57.104/search?q=cache:7hyVr1zqQI0J:www.fsfc.ufl.edu/SafetyHealth/SafetyResources/Best/AccountabilityProcedures.doc+firefighting+term+PAR&hl=en&client=firefox-a

This procedure identifies a system of incident site firefighter accountability. The purpose is to account for all firefighters, at any given time, on the scene of an incident. Use of the system will provide enhanced personal safety for the individual firefighter, and will provide the incident command organization staff an improved means to track and account for all personnel.

The system will be used in situations which require an SCBA or in which a firefighter is at risk of becoming lost, trapped, or injured by the environment or structure. This would include entering a structure reported to be on fire, operating in close proximity to the structure during exterior operations, confined space or trench rescue, large wildland fires, etc.

Rocker Becoming Rolling Paramedic
David Lee Roth Training On NYC Ambulances

POSTED: 1:03 pm EST November 16, 2004

NEW YORK -- Singer David Lee Roth is trading in his rock-n-roll garb for medical scrubs.

The New York Post reports the former Van Halen frontman is now training to become a paramedic. He told the paper he's already been on more than 200 individual rides in Manhattan, the Bronx and Brooklyn, and, so far, no one has recognized him.

His tutor on the job, Linda Reissman, said Roth seems to be taking the task seriously.

"You would never know you were dealing with a rock-and-roll guy," Reissman said.

He appears to handle the job well. Several weeks ago, Roth reportedly saved the life of a heart attack victim in the Bronx by using a defibrillator.

33666. [County Fire] Early Morning 2 alarmer

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-11-16 23:28:01 UTC
From: Craig
Topic: 33666 Message: 33666

Hey guys, just wanted to let everyone know about a fire early this monring at the corner of Hamilton and Eden in Campbell. Passed by @ 6:35am while on my way to work they had Hamilton shut down.

I believe it was contained to just one unit upstairs of a 4 or 6 unit apartment building.

Occured @ 246 West Hamilton

Initial Dispatch @ 5:56am
E11 E10 T5 B3 First Alarm
E3 E9 T1 Hz2 B7 2nd Alarm

33667. More sorta O/T video:

What is FTC anyone? It sounds like they're saying "FTC".. "I'll be setting
up the FTC here, and advise when it's set up."

No other updates on this unless... well... unless it becomes a REAL fire.

Evan

> Only outside of the US would you see the cops do
> something like that!

Totally not true. There was a case a while back in NY or NJ where a guy on a motorcycle decided to outrun a trooper but forgot about the radios. Another trooper got on the freeway ahead of the bike, ran a trafic break on the #1 lane, and pulled down into the #2 ... clearing the lane for the bike. When he saw him, he sped up, put his lightbar on, and pulled out into the #1. He was doing 80+ when the bike impacted his bumper ... doing 140+ ... the biker was thrown in front of the trooper, who dutifully ran him over.

BFD #1 [154.19] 2242/2292 dispatched to 2201 Shattuck/Allston for a medical, 16:27/PT.

33672. Code 777

Date: 2004-11-17 00:30:16 UTC
From: obliviusz
Topic: 33672 Message: 33672

I wouldn't call code 777 a "roadblock" That would imply that the road is being blocked. I'd say it's more of a survey of the cars entering and exiting the freeway. Just my two cents....Thanks Robert

Hey two questions since I'm in the area.

How do you tell what number alarm a fire is? (i.e. First Alarm, 2nd Alarm, etc.)

This one's a big long shot but does anyone know where E19 is quartered? I'm guessing San Anselmo. I'll have to swing by there sometime and check, and maybe I'll be able to put a callsign list together for the area eventually.

E20 is in Sleepy Hollow,
E21 is in Fairfax,
R40 is in Ross.

A initial call is generally (for most areas) considered a first alarm.) A second alarm is different in each area, but it's essentially a call for more resources. For example (and I'm making the numbers up), a second alarm in Sunnyvale may be 2 more engines and one more truck. In San Jose, it may be 3 more engines and 2 trucks. And often it involves out of area resources, i.e. a second alarm in Palo Alto may call for a Engine from Mountain View. And I don't believe it's 'linear', i.e. if a second alarm is 2 more engines and a truck, a 3rd alarm may not be 2 more engines and a truck, it may be 3 more engines. You may not get a truck with every alarm, or the same number of engines. Often you'll get another BC.

We're getting way off topic here so I'll just say that if you'd ever had a wood nightstick break in half while you're using it and then had the supect start using the other half against you, you'd know why most departments long ago went to polycarbonate batons.<g>

Then that becomes, I believe, a force issue. You can only use force sufficient and above the force a suspect is using on you. i.e. if a suspect comes at you with pepper spray, you cannot justify using an AK-47 and opening fire. I'm sure one of our resident LE experts here can comment, but I don't know if you can use a firearm on a suspect wielding a baton... :)

Then that becomes, I believe, a force issue. You can only use force
sufficient and above the force a suspect is using on you. i.e. if a suspect
comes at you with pepper spray, you cannot justify using an AK-47 and
opening fire. I'm sure one of our resident LE experts here can comment, but
I don't know if you can use a firearm on a suspect wielding a baton... :)

33701. San Mateo Co. Sites

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-11-17 15:49:14 UTC
From: Brian C.
Topic: 33701 Message: 33701

Hi all,

Does anyone have a listing of what site you should have programmed for
San Mateo Co. depending on your particular location within the county?
Or, are they all simulcast?

Are there still eight sites within the county?

Thanks,
Brian in Campbell

Uhh thanks Ed, I know how to read. Your post said "Ever hear of a service revolver?" And I simply asked if you could use lethal force on someone using your baton. No harm, no foul. Relax.

>in my original post he fails to see that I did NOT say shoot him

I did not fail to see that.

>,,,,,,,,,but since he pressed the issue......

I didn't "press the issue' I simply inquired about the use of deadly force.

>btw EVAN , which LE do YOU know carrys AK47s ?

It's called a hypothetical situation.

People here need to relax. Re-read my post, Ed:

Then that becomes, I believe, a force issue. You can only use force sufficient and above the force a suspect is using on you. i.e. if a suspect comes at you with pepper spray, you cannot justify using an AK-47 and opening fire. I'm sure one of our resident LE experts here can comment, but I don't know if you can use a firearm on a suspect wielding a baton... :)

Thanks for the input Mike. I guess the officer always has the final say,
however you just have to answer / justify it to IAD.

I don't know of any agencies in the area or country that have AK-47's at their disposal. Lots of agencies are using AR-15's, M-4's, MP-5's etc.

I can't speak for the other agencies in the Bay Area, however, their policies will be similar when it comes to the use of force and the use of a firearm.

In the SO's Use of Force General Order is states that Deputies are authorized to use only that degree of force which is reasonable under the circumstances to protect themselves or others, or to overcome resistance to their lawful authority.

When it comes to Deadly Force, this does NOT necessarily mean a use of a firearm. Although this is probably the most notable, it can mean use of a flashlight, baton vehicle or any other 'thing' that can kill soemone.

Our GO for Use of Firearms states that all reasonable means of apprehension and control shall be exhausted prior to the use of deadly force.

Hope that helps.

More likely I'd have to justify it to a Shooting Review Board first, then IA
and then maybe even a Criminal and/or Civil jury!

Thankfully, I've not been involved in a shooting so far.

I think I had this frequency in my Ham rig because there was a request for Amateurs along the coast to try and monitor the fishing boats that come to the Bay area this time of year and illegally operate on the Amateur bands.

The weird thing is Im hearing what sounds like some sort of encryption being used by these guys.
I heard it a few minutes ago and will try and record some to post.

Being a Ham for over 15 years and knowing the FCC I dont think they will do anything about it.

Encryption on fishing radios is pretty common among the foreign commercial
fleets.

They don't want their "competition" finding their hot fishing spots.

Most are simple speech inversion, but I have heard some analog rolling code
in the
past..

Correct, Mike. Just to put a cap on this, the incident with the
broken nightstick happened to me when I was a police officer for the
Baldwin Park School District in the middle 1970's. We didn't have

portable radios then and it was just me and this guy I had caught coming out of a classroom he had burglarized. The fight was on and, when I used my night stick across his knees, it broke clean in half. He picked it up and came at me swinging. I did draw my Colt 38 (those were the days <g>) and told him he was a dead man if he didn't drop the stick. He did and he didn't die that night and, thank goodness, neither did I. My whole point in first mentioning this is that the PR-24 is safer to use for both the officer and on the suspect and that wooden nightstick have an inherent weakness that can lead to some pretty scary moments.

BTW, that was a time when we routinely wore helmets on patrol. Any other officers on the list remember those days? They were hot as hell in the summer but I'm sure that helmet saved me from a few concussions that my current ball cap wouldn't do much to stop. <BG>

Ed,

Have you heard anymore on this and how badly the officer was injured?
I haven't been able to find anything on the local media sites.

I know you're a rider and the idea of being a police motor officer
always scared me. If you ride a motor long enough, it seems like it's
almost inevitiable that some dumb citizen is going to plow into you.

We have abalone poachers up here that use encrypted ham, business band, and GMRS frequencies in the furtherance of their crimes. Since they are already breaking the law, they don't pay a lot of attention to FCC regs either. <g>

I've also heard squid boat fleets off the Sonoma coast at night using encryption on marine band channels. I know it's them because I can look out and see them and still hear their traffic with my antenna disconnected. They are always using low power portables to talk among themselves so I assume this must be a way not alert other fleets of good squid finds. I have no idea if there's any FCC reg against using encryption on marine band working channels but it's very common to hear up off our coast.

No, I didn't . I monitored it for quite awhile and also monitored EMS to see if I could hear an update for AMR.......nothing . Your right , sooner or later if you ride long enough you go down no matter how good you are. I have " bite " it about 3 times but not in over 20 years. I took multiple safety courses including MSFs Experianced Rider Course twice and that , I am sure , had plenty to do with knowing I have avoided tragedy. If I get an update on the SJPD , of course I will post it.

From: Scott Baldwin
Topic: 33724 Message: 33724

I thought I'd ask the group this question. Saturday I had the pleasure to take a ride on an ambulance as a rear-passenger. The Paramedic that was taking my vitals used a cell phone to contact the ER for my stats, and not Mednet. I assume this is for patient privacy issues as to why they don't use Mednet? I always thought it was because I'm out in the sticks as to why I don't pick up local ambulance activity (Vacaville).

A second question: Why do they send an Engine with the ambulance?

Thanks in advance!

Scott

33725. CHP Officer Claims To Be Victim Of Profiling

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-11-18 03:08:09 UTC
From: Nick in SLO
Topic: 33725 Message: 33725

POSTED: 4:13 pm PST November 17, 2004

PLEASANT HILL, Calif. -- A black California Highway Patrol Officer has filed a civil-rights lawsuit against two white Pleasant Hill police officers, accusing them of holding him and his partner at gunpoint.

According to the suit, CHP Officer San Morgan, 44, and his partner were serving a tax warrant at a Pleasant Hill video store on Dec. 19, 2003 when police Cpl. Steve Dexheimer and Officer Drew Sanchez entered with their guns drawn.

The two CHP officers, who were in plainclothes, attempted to identify themselves by pointing to their badges, but were ignored, the suit said. They were allegedly ordered to the ground and handcuffed, then stripped of their weapons, ammunition magazines, batons, handcuffs, CHP cards and driver's licenses.

"I think this case just shows that racial profiling so infects our society that even a police officer is at risk," said Morgan's attorney, Michael Haddad of Oakland. "Even though they had badges hanging from their necks, an assumption was made that they couldn't possibly be police officers."

Harry Stern, an attorney whose firm represents the Pleasant Hill Police Officers Association, defended the officers, contending that they responded appropriately to what might have looked like an armed robbery.

There are no blacks on Pleasant Hill's 44-member police force, officials said.

Listen to CCSO's ch. 1 tonight.... 155.310

Took the channel down for several hours this afternoon. Sounds like they fixed the repeater "voter" problem, because all radio traffic is crystal clear. Sounds very similar to CCSO Ch. 3 (155.190). Never got ch. 1 very well in San Ramon, but now it comes in very strong.... check it out.

I cant answer for this specific agency of course, but my guess is that on question #1 you are correct. Things have changed much since the implementation on HIPAA (I know I prob dont have speeling right..) in the area of patient privacy...hence the cell phone. This issue has been discussed at length on many scanner boards...I think here also.

As for the reason for the engine... Common practice at almost every area in the country. Two main reasons (though the list of minor reasons is long..). #1 Many places have far more ENGINES than they do ambulances, and as such have much quicker reponse times to emergency calls, hence they respond into begin initial evaluation and treatment of the patient prior to the ambulance arrival. In recent years many departments have started placing paramedic firefighters on each engine to begin actual ALS care before the ambulance arrives, but even those departments without "MEDIC ENGINES" still perform BLS care.

#2 - Many medical aid calls can require more thant the typical two staff of an ambulance, especially if there is any type of rescue to go along with the medical problem which is common.

Hope this helps..

John

I can only speak about what they do here on the city (SF)
They always send an engine because the engine get there first most of the time,(same for most areas)
Most of our engines are ALS with only a few that are BLS but that changes from day to day & they have the Rescue captains for the major calls (we have 4 on most days)
Has far as the cellphone they use them here because they work where as Mednet is a pain to use because the hosp don't pick up half the time (but not true with MEH/ SFGH)

keep in mind (and i don't know where you're at, so i have no idea what department / agencies you got transported by), there are many departments in california that are no longer using the standard MedNet frequencies. just as an example, santa clara county hasn't used it's med-net frequenices that were originally licensed to it since sometime in the mid or late 90's (that's the last time i recalled hearing them used, and santa clara county was doing full-duplex on theirs for ambulance to hospital traffic.

just some other examples...

alameda county... 800 trunked for ambulance to hosp traffic.
monterey county uses the mednet channels
santa clara county does initial ringdown and notification to hospitals on channel 2 of it's 800 conventional system
san francisco is paranoid and does notifications and ambulance to hospital comms on an encrypted digital talkgroup

Med-91 is now only used for code 3 transports to the hospital. My guess is too many times a code 3 medic unit had to wait while a ringdown was being done for a code 2 transport. AFAIK, isn't really because if patient confidentiality.

>A second question: Why do they send an Engine with the ambulance?

The engine will typically beat the ambulance. :)

new county contract says all fire departments will have a paramedic on the engine and arrive with a response time of 7:59 sec or less. This allows the ambulance to have a longer response time of 12 min. vs the old response time of 8 min. Also it is better for pt care. to have a paramedic arrive qicker. Like evan said there are more fire stations then there are ambulances. Engine generaly arrives first. The only exception to this is sunnyvale .. thats why there is Med 7 and Med 8. These QRV's (quick response vehilce) make up for the lack of paramedics on SVDPS fire trucks however still maintaining the county contract.

I was thinking the same thing! LOL!

Thanks to everyone for answering my question. What happened in my case is both Engine and Ambulance arrived at the same time. In Vacaville, a city owned ambulance is stationed at each station.

Now in Elmira (on the other side of the train tracks from Vacaville) county has jurisdiction. So they'll tone out an ambulance from a Vacaville station, and a small fire truck from the volunteer station. But they'll sit in the parking lot and wait for the ambulance to cross the tracks before they roll out. Kind of bothersome when you have a parent having breathing problems and the station is right around the corner from your house!

Again, thanks for the info!

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-11-18 17:30:42 UTC
From: caladded@aol.com
Topic: 19989 Message: 33753

Nina ..... I , at first incorrectly identified Castro Valley CHP units at 43,,,,,,,,they are 143. Designator , in this instance 143 ..indicates the office the CHP units work out of. SF-CHP designator is 32 , Marin is 34 . PD units do the same , for instance SFPD 3A units are out of Central Station. here the 3 means Patrol Division and the A means Central station. One designator may mean location, another may mean type of unit , and others indicate other things. For instance.....
in San Mateo County 18Sam1.....the 18 means East Palo Alto , the SAM (or S) means Sargeant and the 1 is his unit number. Fire depts do the same. For instance in Alameda County. Engine 2552 .....25 means Oakland , the 3rd digit indicates Engine. Alameda County among others have their Engines starting with 4,5 or 6 . this varies from location to location. Only time and a lot of monitoring really help learning all of them.

> what's designator?

It basically has to do with each unit's radio callsign.

Listen to CHP. You'll find that they start their callsign with their office number, followed by unit number/beat. In the case of 143### (mistakenly written at 43 instead of 143), 143 corresponds to the Castro Valley Office--### is the beat.

This channel is used for Western Contra Costa County.

Your thinking of 155.190, that is the Eastern dispatch channel.

Just called my contact with the Sheriff's Office ;)

He told me Channel 1 (155.310) is now a simulcast on all of our repeater sites for Channel 1. They way the system used to work it is that the dispatcher would pick the best repeater site for the unit to hear us on and only one site worked at a time. Now, all the repeater sites are transmitting at the same time. This will be happening to Channel 2 as well (155.250, Central County) fairly soon.

I guess this all started when the voter for Cummings site went down for an unknown reason.

There are still plans to make two additional dispatch channels, when that will happen is unknown, but Tac 1 (154.950) and Tac 2 (155.790) are the channels that will change.

I notice Mill Valley PD say "go to tac 2" the other day and in search found that the talk group they went to was 46160. I didnt see this talk group listed in any of the lists I had so you might want to add it to the list under:

46160 Tac 2 Mill Valley, Sausalito, Tiburon, Belvedere PD
Im just going to assume that for now since all above department used to share a common dispatch frequency when on the low bands and are dispatched as one area on the new MERA system also.

Planners delay wireless antenna
By Jennifer Upshaw
IJ reporter

Thursday, November 18, 2004 - Plans to install a wireless antenna atop a Marinwood church are in limbo after the Marin County Planning Commission sided with a neighbor fighting its placement.

Marinwood resident Barbara

Inwald appealed a planning staff decision to allow a Cingular Wireless antenna on the roof of the Church of the Nativity at 333 Ellen Drive, saying she was worried about her children's safety. She said an antenna ought to be placed away from residential areas.

The commission, in a 4-2 vote this week, upheld the appeal based on the fact that proponents had not fully explored alternative sites for the antenna, county officials said.

Commissioners Don Dickenson and Allan Berland voted against the appeal. Vice Chairman Steve Thompson was absent.

"The majority of commissioners felt they needed more detailed information about other sites," said Brian Crawford, the county's deputy director of planning services. "It's not a conclusive definite denial of the church site."

The decision leaves the door open to the applicant to file a new permit request, amended to include more detail about alternative sites in the area, county officials said. Proponents also have 10 days to appeal to the Board of Supervisors, county officials said.

Inwald said she was relieved.

"The commissioners realized the community really was upset about it," she said. "I'm very happy. I'm so glad and my husband is so glad that we won't have to move. I just hope it's over."

The Rev. Stacey Grossman, rector of the church, said church officials are meeting to determine what to do next.

Officials with Cingular are doing the same, said Lauren Garner, a company spokeswoman.

"This site is important to meet the customers' needs in the Marinwood area. Cingular works hard to design a site that would meet local community aesthetics and zoning procedures, as well as our customers' needs," she said in a statement.

Company officials "will continue to evaluate our options for a site in this area to provide the best possible wireless experience," she said.

The proposed project involved installing four antenna panels hidden by a 35-foot-long roof-mounted cupola.

The loss of the cupola that is intended to solve a leaky roof problem at the church is a setback, said Charles Pick, the San Rafael-based architect on the project.

"We have no plan," said Pick, whose wife is a member of the church. "The building continues to leak. I have no instructions at this point in time. I have no idea how to stop the problem."

i always tell them there's more RF radiation leaking from their
microwave ovens than they'd be exposed to near the cell tower. heh...
if the seals are going bad on their microwave, chances are it's true. :-)

but you can't convince a bunch of zealots who are easily swayed by
sensationalist claims from a few quacks over the 'dangers of RF
radiation'. they're only a step or two away from wearing foil hats.
every time i'm vegitating in the CW testing van while we're doing a
potential site survey in a public area i always get a few questions from
random people. anyone that comes up and asks what the antenna on the 60
foot tower is for gets a straight answer. occasionally one of them
shrinks back in fear and i take the time to explain and 'set them
straight' on RF radiation. i think i'm pretty successful, as most
people appear to be a little enlightened once i get done talking to them.

Nope. Don Root explained 37.14MHz quite well here
earlier this year.

It's a high-profile link to various CHP Blue
repeaters in the Bay Area.

Robert,

I've had 46160 in my Pro-96 as Mill Valley Tac 2 for about a month. I think you were the one who first found it. I probably don't pay as close attention as you do to MERA freqs but I have yet to hear anyone but Mill Vally on this TG. I wonder if the other agencies will get their own tac TG when the Tiburon tower is finally up and working?

33790. 246T Review

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-11-20 00:16:34 UTC
From: Bryan C. Carmody
Topic: 33790 Message: 33790

Got a 246T yesterday and here's some initial reactions: This radio is cool! It works totally differently than any other radio I have used. It doesn't have a certin number of chanels you can program, it has available memory. You can put in as many chanels as the memory will hold. If you alpha tag everything (this uses memory) you will be able to put fewer chanels in than if you don't alpha. Also the "banks" and "groups" thing is much different than the usual bearcat setup. You program a system and then assign a "quick key" (what we would think of as a bank) to the system. Also you can assign the same quick key to different systems. So you can have many different trunked systems in the same "bank." Each system can be locked out seperately (even in the same bank.) You can also have systems that are not assigned a bank at all. The radio will scan the "banks" and the general memory. The trunked ID's work in a simular way, they can be assigned a quick key also or just left in "space" in the scanner, again no limit as long as you have memory. Not so sure about the Quick Call thing seems to be OK at best. I saw it work when I keyed different radios near the scanner, also caught a few things driving around, but it didn't do a thing when I was less than 10 feet from an SFO motorcycle cop who I could hear transmitting on another radio. Its an 800mhz freq that the radio should get acording to the specs. Sound: like the recent bearcat releases they seemd to have made this radio loud enough. Compared to the 250D it does sound a little "tinny" but I assume that has to do with the super small size of the radio/speaker. Size: SMALL, this radio is tiny. About the size of a minitor fire pager. To sum it up I really like this new radio. Seems like a great deal for $250. Really the only bad thing I can say... too bad it's not digital. Sorry Marin and San Mateo folks. Happy scanning. BC

It's not down... It's technically "up". Although as far as I can determine, the server is misconfigured - or rather not fully configured.. Notice there's a 'index.shtml' link - this should automatically load when you go to www.trunkedradio.net - since it doesn't, simply go to http://www.trunkedradio.net/index.shtml - and it tells you the site building is in progress

33795. Shots at Golden Gate Transit on 101

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-11-20 02:33:42 UTC
From: Robert W. Sanford
Topic: 33795 Message: 33795

Just heard a request on Marin CHP 42.160 for H-30 to come down and fly over the 101 stretch from Seminary to the 131 or Tiburon exit.

They stated that someone has been shooting at the Golden Gate Transit buses that are going through the area heading in the Northbound direction.

More to follow if I hear anything.

Im assuming that SF is not as big as NYC my old home town that has a 24/7
bomb squad.

I think I have heard this call before and the guy resides in Petaluma,
maybe the head of the bomb squad or one of the experts in devices?

Just an educated guess.

33806. DoD aeronautical info pulled from Internet

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-11-20 04:19:36 UTC
From: Rick Prelinger
Topic: 33806 Message: 33806

19 November 2004 Source: http://www.access.gpo.gov/su_docs/aces/fr-cont.html ---------- [Federal Register: November 18, 2004 (Volume 69, Number 222)] [Notices] [Page 67546-67547] From the Federal Register Online via GPO Access [wais.access.gpo.gov] [DOCID:fr18no04-31] ---------- DEPARTMENT OF DEFENSE Office of the Secretary Announcement of Intent To Initiate the Process To Remove Aeronautical Information From Public Sale and Distribution AGENCY: National Geospatial-Intelligence Agency (NGA), Department of Defense. ACTION: Notice. ---------- SUMMARY: The National Geospatial-Intelligence Agency (NGA) intends to remove its Flight Information Publications (FLIP), Digital Aeronautical Flight Information File (DAFIF), and related aeronautical safety of navigation digital and hardcopy publications from public sale and distribution. This action is taken to accomplish the following objectives: safeguarding the integrity of Department of Defense (DoD) aeronautical navigation data currently available on the public Internet; preventing unfettered access to air facility data by those intending harm to the United States, its interests or allies; upholding terms of bi-lateral geospatial data-sharing agreements; avoiding competition with commercial interests; and avoiding intellectual property/copyright disputes with foreign agencies that provide host-nation aeronautical data. The DAFIF and related digital aeronautical information files will be protected from general public access on the NGA home page (http://www.nga.mil (http://frwebgate.access.gpo.gov/cgi-bin/leaving.cgi?from=leavingFR.html&log=linklog&to=http://www.nga.mil)). Aeronautical Flight Information Publications (FLIP), Navigation/Planning Charts (ONC, TPC, etc.), and the DAFIF CD will be available only through the Department of Defense (DoD) distribution system. U.S. Federal and State government agencies, authorized government contractors, and international agencies that currently receive those products under formal or informal geospatial data exchange arrangements will not be affected by this action. DATES: NGA will implement this action on October 1, 2005 (FY06). FOR FURTHER INFORMATION CONTACT: For further information about the substance of this notice, contact Joseph S. Jarvis, Aeronautical Division, MS L-27, National Geospatial-Intelligence Agency, 3838 Vogel Road, Arnold, Missouri, 63010-6238 (e-mail: JarvisJ@...). SUPPLEMENTARY INFORMATION: NGA and its predecessor organizations (DMA and NIMA) have published DoD's flight information products since the late 1940s to support the worldwide missions of DoD aircraft. The publications are sold to the public through the auspices of the Federal Aviation Administration (FAA), and the digital data has been freely available on the Internet. Notwithstanding a prior practice of making some of DoD's flight information available to the public in the past, NGA does not have a statutory requirement to produce aeronautical products for general civil aviation. With the proliferation of digital capabilities throughout the international aviation network, the preferred method of information exchange is shifting from paper-based to electronic dissemination. Numerous countries that heretofore relied on host-government agencies to compile and publish their aeronautical information have recently transferred that responsibility to commercial or quasi-governmental agencies. Some of these foreign agencies are beginning to assert intellectual property rights to the aeronautical data within their territorial limits and are refusing to provide such aeronautical data to DoD so long as NGA makes it available to outside interests, whom these agencies view as

possible competitors in the international marketplace. NGA relies on foreign data obtained through bilateral geospatial information sharing agreements, and certain nations may impose restrictions on their data against release to third parties. Accordingly, there is a rational basis for limiting access to aeronautical products created for DoD use to DoD and governmental end users. By removing national defense aeronautical data from open source access NGA seeks to accomplish two additional objectives. First, NGA will reduce the vulnerability of critical navigation data on the Internet. Second, it will limit/eliminate unfettered access to that data by organizations and individuals intent on causing harm. In conclusion, with the accomplishment of this proposed action NGA aims to protect the sources and integrity of its data, honor its bilateral agreements restricting non-governmental use, avoid competition with commercial interests, and allow NGA to focus on its primary customers and mission, supporting the Department of Defense. [[Page 67547]] Dated: November 12, 2004. Jeannette Owings-Ballard, OSD Federal Register Liaison Officer, Department of Defense. Does anyone know what function 7X1 is with Fremont PD? I heard this call for the first time this morning. I know the 6 units are school resource officers, but have not heard "7" units before. Also, what is "flex", such as "your flex is apporved"? ALCO tags have been coming in quite loud and clear these last few weeks. I live near the hills and frequently the PD and ALCO fire dispatch would come in with static. Has ALCO made some improvements for South County units??

Dave

Hi Brian. I have no idea if you will be able to answer my questions about this radio. I am blind and would like to know if the radio is accessible? in other words, if you were in a totally dark closet and your life depended on you listening to your BC246 scanner to gain information that would enable you to get out of ther alright, could you do it without being able to see the display? I have two BC245's which I can mostly use. I say mostly, because I don't know what I can't access on the radios. I can program trunked systems, recal single talk groups, recall individual non-trunked memories and search between various frequency parameters which probably wouldn't be necessary with the new receive feature on the BC246. I am using a Yaesu VX5R HT which sounds about the same size as the 246. I would love a scanner the same size. Any thoughts are much appreciated. Thanks, Jim

Subject: [bayscan] 246T Review

>
> Got a 246T yesterday and here's some initial reactions: This radio is cool! It works totally differently than any other radio I have used. It doesn't have a certin number of chanels you can program, it has available memory. You can put in as many chanels as the memory will hold. If you alpha tag everything (this uses memory) you will be able to put fewer chanels in than if you don't alpha. Also the "banks" and "groups" thing is much different than the usual bearcat setup. You program a system and then assign a "quick key" (what we would think of as a bank) to the system. Also you can assign the same quick key to different systems. So you can have many different trunked systems in the same "bank." Each system can be locked out seperately (even in the same bank.) You can also have systems that are not assigned a bank at all. The radio will scan the "banks" and the general memory. The trunked ID's work in a simular way, they can be assigned a quick key also or just left in "space" in the scanner, again no limit as long as you have memory. Not so sure about the Quick Call thing seems to be OK at best. I saw it work when I keyed different radios near the scanner, also caught a few things driving around, but it didn't do a thing when I was less than 10 feet from an SFO motorcycle cop who I could hear transmitting on another radio. Its an 800mhz freq that the radio should get acording to the specs. Sound: like the recent bearcat releases they seemd to have made this radio loud enough. Compared to the 250D it does sound a little "tinny" but I assume that has to do with the super small size of the radio/speaker. Size: SMALL, this radio is tiny. About the size of a minitor fire pager. To sum it up I really like this new radio. Seems like a great deal for $250. Really the only bad thing I can say... too bad it's not digital. Sorry Marin and San Mateo folks. Happy scanning. BC

Time to reprogram my radios! I can almost pick up one of CoCoSo's freq's in my mobile.

Speaking of code-22's.. (Well we call them code 22's here) - I heard Sunnyvale DPS's code 22. I haven't been monitoring PD as much recently since I became more heavily involved in the fire service. But I remember Palo ALto and Mounntain View's code 22 beep - very quick and subtle "beep" (lasts less then one second) every 10 seconds. Sunnyvale PD's is about 3 seconds long, and every 5 or so seconds... Anyone know why?

Evan

C'mon, all. Please use clear text. You don't have to be from out of state to get lost in the meanings.

While it may be 'cool' to show you grok the lingo, remember that there is NO standard list of aural brevity codes among our public safety agencies, and that people who are not 'in the biz' read what we post. Let's make the extra effort to spell it out, like "(Code 33 = Emergency Traffic Restriction on channel)" or "(Code 777 = fixed post stakeout)."

Thanks,
Don

I do it for IPN because IPN is a national service , Most of Bayscan people either live in the area or DID live here at one time. Speaking of IPN which has Firefeeds.com.....FDNY which i monitor has plenty of codes , I don't whine , what I did is research it and found the list and printed it out. I pull it out of my drawer here at my desk when I monitor FDNY.....how hard is that ?

>Gee, and to think I thought this group was about people helping people.

Let me add on to my post:

There's a LOT of agencies I don't / can't monitor. SFFD for example. I have a two way radio programmed up with their talkgroups - which is about 5 times more sensitive than a scanner, and I STILL have to stand outside and hold the radio up high to barely hear them. Contra Costa fire? Nope. So since I can't actively listen to either of those, why should I keep a book of the codes used? Now you, or someone else who listens, knows the difference between say a code 273 (cat stuck in a tree) and a code 443 (gang shooting). So when you (and I'm not saying anyone in particular, I'm saying the person listening) hears Code 273, he knows not to bother putting it out to bayscan. But when they hear code 443, they know it's a shooting, and they know to put it out. So why not make it simpler for everyone and use plain text? Granted there'll be times when out of habit you say "Code-78 at this time (asking for additional officers code-3) out of habit - so if someone then says "What is code 78?" simply tell them.

I for one have no interest in having a book with the codes of all the cities covered here on bayscan. Much simpler for me to have the codes for the cities I can hear.

Ok, once again, if you hear a code 743, and know that's it's shots fired,
is it THAT hard to post "Shots fired" v.s. "Code 743?

The attitude here should be helping other people, not telling them to go
out and buy books.

Enough already, nobody bother to tell this person that there are codes for most Bay Area Agencies in the file section of this group.
No you want to bitch about other people and the way they do things and how they are not up to your standards.

GET OVER IT, if your such a big shot than why tell everyone?
NOBODY CARES.

To the person from the east coast please check the file section of this group.

Well GOLLY GEE!! Sorry I started all this trouble about the code 33. Ironically no one else caught the original event or has been able to give any more info on what happened. I figured that people would know what a code 33 was since we are all scanner listeners. You could at least deduce it was something serious as I mentioned a Life Flight copter having picked up a victim. My goodness, it's too bad how folks get off on tangents. Bill, if you are still checking all this out after the storm of emails about it, a Code 33 is a radio emergency where no traffic is conducted other then that pertaining to the emergency and communications is kepte to a minimum. Now I suppose someone is going to tell me that my lay definition of a code 33 is wrong.

Well, I should probably keep my mouth (or keyboard, in this case <g>) shut but there are two good points in this thread. First, there are listings of many of the codes in the files area so that would help any new person subscribing to the list, whether from this area or not.

Second, Don has a good point. In many cases, using clear text is no more difficult than using a radio code that may cause a lot of people to have dig up a list to figure out what's going on. To those of us who have been around a long time, these codes are second nature but they aren't to a lot of casual listeners or people not involved in emergency services. The move in public service radio is to clear text although the police are the slowest in following this trend. The move to clear text is precisely so everyone who hears the message understands the meaning. It seems like a reasonable request to use clear text when explaining a code doesn't require two paragraphs of clarification.

Jim, your explanation of a Code 33 seem fine to me.

Regards, Jim

Believe it or not, we used to use 10-7 Nora, as in "Call of Nature".
We used to have a code for everything! Now we just say we'll be off
the air for 5 and everyone knows what that means. <g>

33868. SJPD Foot Pursuit

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-11-20 22:16:12 UTC
From: Craig Rose
Topic: 33868 Message: 33868

San Jose PD just had a foot pursuit of two 594 suspects at the CalTrain station. Units still circulating the area after losing them while running between trains.

Being handled on SJPD - 2 (460.275)

-C-

To my knowledge PDMAC is Mera's Police Dept Mutual Aid Channel. I've only heard it used a couple of times and that was when novato PD was trying to communicate with the SO. I also heard county fire talking with the SO one time. I think it is simulcast on the old 39.52 freq.

What doesn't make sense to me is that everyone could communicate with each other last night except for CHP. They were landline with Marin. Why don't they have a MERA patch?

I was impressed by the multi agency communications on pdmac. Even Henry 1 and H-32 were on pdmac. Not sure why other CHP units were not...

I don't know if the suspect was caught but i don't believe so. Around 1:15 AM the perimeter was called off and the code 33 was lifted. I saw the article in the Marin I.J. today and it showed a picture of the crime scene but stated "Authorities declined to release further information at this time"

...amidst the transmissions during the novato shooting last night, i
heard references to "pdmac" . can someone tell me what that is? is
this the term pd uses for their mobile data terminals?

btw, was the suspect apprehended? last i heard sar was being called
for evidence recovery...

thanks, nina

How about this: if you use a code because that's what you heard and want to report it as such, just put the meaning in parens and continue on.

Today in Berkekey, BPD (Dispatch: 460.175) had a unit respond to a ringer (alarm activation) and found an open door. He requested a code-33 (priority on the channel, with tone) and waited for backup. I had to go into the store just then, and when I came out it was code-4 (okie-dokie, nbfd).

I'm actually pretty surprised at how casually this term is used on many department's radios; 5150 is a very serious issue, but I've heard people say things like "I talked to him earlier, he wasn't very 5150" casually, like the way (I know, jokingly!) it was just used here. I know in Berkeley it often gets used as shorthand for "crazy street person" which most of them are NOT 5150 at all.

>Gee, and to think I thought this group was about people helping people.

Let me add on to my post:

There's a LOT of agencies I don't / can't monitor. SFFD for example. I have a two way radio programmed up with their talkgroups - which is about 5 times more sensitive than a scanner, and I STILL have to stand outside and hold the radio up high to barely hear them. Contra Costa fire? Nope. So since I can't actively listen to either of those, why should I keep a book of the codes used? Now you, or someone else who listens, knows the difference between say a code 273 (cat stuck in a tree) and a code 443 (gang shooting). So when you (and I'm not saying anyone in particular, I'm saying the person listening) hears Code 273, he knows not to bother putting it out to bayscan. But when they hear code 443, they know it's a shooting, and they know to put it out. So why not make it simpler for everyone and use plain text? Granted there'll be times when out of habit you say "Code-78 at this time (asking for additional officers code-3) out of habit - so if someone then says "What is code 78?" simply tell them.

I for one have no interest in having a book with the codes of all the cities covered here on bayscan. Much simpler for me to have the codes for the cities I can hear.

Most of the 5150's or ones almost there (5149.5's) we encounter on the street are actually quite interesting people. Here's one example. Several of our deputies (SCCSO) responded to a call of shots fired at the R/P's (reporting party) husband in a hotel room in Cupertino. When the deputies arrived they determined that there had NOT been any shots fired and the woman didn't have a husband. While he deputies were questioning her about calling 9-1-1 she seemed as 'normal' as anyone else. However, in the middle of a sentence she quickly looked up toward the ceiling and said something like, It's OK. You can go with them. There OK. Then she looked back at them and continued the conversation. This happened several times before they dropped her off at Valley Medical Center Emergency Psych Services.

It is serious but when we deal with them we sometimes get a good laugh afterward.

Mike

Exactly. And I can't speak from a LEO (Law Enforcement Officer)'s point view, but I'm fairly certain if he / she finds themself the target of someone doing some shooting practice, they will key up with "Shots Fired! Officer needs help!" Not "Code 142! Code 142!"

>Second, Don has a good point. In many cases, using clear text is no

Exactly. Except when officer safety is involved. 10-36 is the common one I hear - "Can suspect hear your radio?" Basically it means dispatch is about to tell you the person you just pulled over has a few warrants, so make sure to turn your radio down. Or patient confidentiality.

I was surprised one day to hear a fire call and dispatch advise the incoming engine that the suspect "HBD" (Has Been Drinking - more a police code) - usually they'll say "Possibly ETOH" for fire). The fire captain asked what HBD was, and I was expecting to hear "Sorry, ETOH" but the dispatcher advised "Has been drinking". Codes like that are fairly universal.

I know that Henry One has two MPDMAC channels so we can talk to Marin direct on analog UHF-T band. I assume that H-30 must have a similar setup. I think the problem is that CHP mobile units only have VHF and no UHF capability. There are two CHP talk groups listed for MERA but I don't think the patch or the needed equipment has been installed yet.

Regards, Jim

A penal code is a penal code. However the whole point of the discussion wasn't "DON'T USE CODES!" it's more if someone asks what the code is, have the common courtesy to tell them, not reply with "Get your lazy ass off your seat and find it yourself you ignorant moron."

Although that really only needs to be directed at one person, and I won't name names.

Well I'll tell ya something Ed ... I *am* a dispatcher and use codes all
day long. I never dream of using my codes when talking to another agency
(that uses codes also). Every agency has different meanings for codes,
and I do mean every agency.

When I post to any of the lists I belong to I always use clear text. Not
everyone is going to know the codes for my agency. Oh, I live in Kern
County and we are a fairly small listening area (7 police departments,
1 sheriff's deparment, 4 fire departments and 3 CHP channels). That is
quite a few different codes for just my county. In an area like the bay
area, it is 10-20 times more hectic.

It does not take more than few seconds to type "Fatal Accident" vs. 11-44.

Just my 2 cents from a users standpoint.

Mike

CHP helo radios have capability to program on anything in the state. I had Bakersfield CHP call and ask what frequency our Channel 1 was to their helo (I think H40, from Fresno) could assist us on a vehicle pursuit. Too bad their cars are not so equipped, but that is a whole different discussion. ;-)

There are/were talkgroups that were going to be CHP patches , but with all
the changes with MERA I guess they aren't using them. Wait until the whole
system is up and you might full well find they do have them and hopefully use them.

I don't think they are using them, but you can try

There was a discussion on a LMR group I'm on about that - someone was looking for one radio to handle VHF, UHF and 800 mhz. The closest thing is a Wolfsburg radio which is designed for aircraft, but would need a whole lot of modifications to work in a car.

They did make a Ham radio that was a Tri-Bander. Can't recall the name or model. 2 bands were standard, the thrid was a optional purchase. It did, IIRC, 144-148, 440-450, and the third band could be either 220 or 1.2 ghz.

For all involved.......

Let me apologize for those I kind of attacked today. And for those who know me you realize I don't apologize often <grin> . It has been a tough 24 hours. let me explain

Late last night, I was informed that United States Marine Corps Lance Corporal Philip West was killed in Fallujah (SIC) He was among a group of 10 , of which only the Unit commander is not either dead or injured.

Lance Corporal West graduated from Vintage High School in Napa in June of 2003. He was either 19 or 20. He is from American Canyon.

I was at his graduation although I didn't know him, but had heard his name. He was best friends with my nephew Matthew who will go to basic training in the USMC this coming March. I have been worried about this since he told me he wanted to be a Marine, although I could not be more proud of him. He is interested in Law Enforcement. I look forward to his becoming a Marine and getting a pic of him in his dress blues. I look forward to seeing him become a Police Officer someday if he in facts holds on to that dream.

Lance Corporal West will not see his dreams nor will his family and friends. I just don't want to get news that Matthew is coming home someday in a flag covered coffin as L/C West is about to.......

lot of my mind.

I forgot to mention that I did hear Henry 1 and H32 on PDMAC last night. I just didn't hear any of the ground units. I guess the air unit radios can be programmed for anything.

Oh and Nina, I have no idea. I just make observations. Still a rookie:)

~>220 or 1.2 ghz.

Kenwood makes three triband models, TM-642 (144/222/3rd optional), TM-742 (144/440/3rd optional) and the TM-942 (144/440/1200 MHz). None of these are FCC type-accepted for use in the public safety band. Although, there are mods that can open up the TX'er for MARS/CAP that coincidentally open up everything else.

33906. San Mateo County APCO 25 QUESTIONS!!!!

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-11-21 16:54:07 UTC
From: ellenchandler
Topic: 33906 Message: 33906

I just got my digital card for my BC250D. I found a listing of frequencies on a bearcat1 webpage. The frequencies are separated by zones such as Brisbane, North Zone, South Zone, Woodside, etc. It was not obvious how to set up the base config1, 2, and 3. I found some info on some guy's website and entered his specs. All I get are North Zone broadcasts.

Can someone answer these questions for me? (or tell me where some documentation is about this...)
1. Can Brisbane and South Zone frequencies go in the same bank as the North Zone? They use the same trunk ID#s.
2. What are base config1, base config2, and base config3 settings for? Why are there 3 settings? I have no idea!
3. Is there anything else I should know about programming these digital frequencies?

Thanks so much for any help. The North County sounds great so far!

No "trunks," come on now George.....

Interesting the fire fighters union, local 798 , took out a full page ad in the Chronicle asking people to call da Mayor about the cuts. I am pretty sure they are afraid some of these brown outs could become permanent.

Division One is out due to budget cuts as are some of the Chiefs' Operators positions.....i.e.. some of the Battalion Chiefs drive themselves to runs.....they kept some so they have some communications people at greater alarms. Divisions 2 and 3 still have their Operators. I doubt the TRUCKS will get browned out,,,,,,,,,but , you never know.

oh they have , hmmm ok.

there are also rumors that they want to build a new Station One in the area of 7th and Mission. The station NEEDS 3 apparatus doors as it houses 3 busy units , Eng 1 Trk 1 and Rescue 1 (and for now , Medic one) but the medic unit will go back to Dept of Public Health in about a year.

Another is moving Station 8 (now in Bluxome alley near 4th and Brannan) south on the other side of the channel past SBC park. I am wondering if they might cut Engine 29 (16th and Vermont) if that happens. time will tell.

Here are the official definitions for maritime distress calling:

WHAT ARE THE MARINE EMERGENCY SIGNALS?

The three spoken international emergency signals are:

(1) MAYDAY -- The distress signal MAYDAY is used to indicate that a station is threatened by grave and imminent danger and requests immediate assistance

(2) PAN PAN -- The urgency signal PAN PAN is used when the safety of the ship or person is in jeopardy.

(3) SECURITE -- The safety signal SECURITE is used for messages about the safety of navigation or important weather warnings.

they just reopened Station 1 in the last three(3) years after a retrofit so I don't see them moving it anytime soon. and as far as Station 8 I couldn't say but I think that it's a modern station and again I don't think the city has the money to do anything like that for awhile.

7th & Mission is the new Fed building that has a fire or call out almost everyday (or so it seems) and unless the FEDS are going to pay for it I don't see that happening anytime at all.

Now let me say this first, I do not work for the city so I have no direct knowledge of any cuts or plans other that some back channel info from friends.

My big worry is that they are going to cut the NERT program (www.nertnews.org or www.sfgov.org/nert) and now that I've started on my rant, I wish the city would come up with a Fire Reserve program that would have TRAINED VOLUNTEERS to help with fires and other emergencies during brown out and such, but so far the NERT program is the best thing going.

anyway just my .02 cent worth.

Hi, Ed,
I am using ID Search for talk groups right now. I have a talk group list but it does not have a lot in it. I am getting the Sheriff, not sure on Redwood City police. I'll check for that.

I just went on Radio Reference and found the SM CTY list. Its great. I live near Brisbane, so I wanted to get the Brisbane transmissions. I guess they are part of North Cty fire. The Brisbane frequencies were granted in 2001, and the North Cty frequencies are new. Maybe Brisbane does not use the old frequencies anymore, even though they are listed in the San Mateo System.

George, hate to tell you this but your grossly misinformed.

I get my information from people INSIDE the SFFD. While the Station 1 thing as a long way to go keep this in mind. The hotel next door to the existing Station 1 wants the SFFD to move and I am sure will foot the bill. The station ONLY has 2 doors, totally unacceptable for 3 busy Fire units. Station 8 is MODERN? try again, it may have gone thru retrofitting but its an OLD station, older than ME! LOL

True they need some fancy financing for any of this

You have NEVER HEARD of the SFFD Reserve? They have been in existing since World War 2. They train at the Division of Training every Thursday night around 1930 hours. I WAS a Lieutenant in that organization. I have made references to them on this board? Call the SFFD information number for more information on the Reserves.

actually, y all probably know that "mayday" derives *from* the french
for "m'aider" (pronounced may-day).

as i understand it, and others may (and certainly will) correct me, it
is because french was once the international language of diplomacy and
global communication.

so, while i can not tell you what pan pan pan or pon pon is (and i will
try to find out) i *can* tell you that it is not french.

Ed,
Thanks for these ID's and the Brisbane frequencies. I will check if I have them. I thought Brisbane police ended up on the digital trunk system, but I guess its just the Fire Dept, as part of North County.

Ang, again, for those that missed it - here are the official definitions as supplied by the FCC:

WHAT ARE THE MARINE EMERGENCY SIGNALS?

The three spoken international emergency signals are:

(1) MAYDAY -- The distress signal MAYDAY is used to indicate that a station is threatened by grave and imminent danger and requests immediate assistance

(2) PAN PAN -- The urgency signal PAN PAN is used when the safety of the ship or person is in jeopardy.

(3) SECURITE -- The safety signal SECURITE is used for messages about the safety of navigation or important weather warnings.

SOS - or more than you ever wanted to know!

--

In 1908, an international committee tried to come up with a distress signal that would be easy to remember during a crisis, and could be transmitted by an amateur with only rudimentary knowledge of Morse Code. They decided a simple combination of threes: three letters, each represented by three marks, since three is a universally favored number. Well, at least in Western cultures.

In Morse Code, the only letters represented by three identical marks are O (three dashes) and S (three dots). The committee toyed with OSO, but dashes are longer electrical signals to transmit than dots. An urgent message needed to be broadcast as quickly as possible and use as little power as possible, and so SOS became international standard.

During WWII, the signal "SSS" was adopted when the source of the emergency was a submarine attack, presumably so that potential rescue ships would know there was an enemy sub in the area.

In 1917, Edwin Cox of San Francisco dipped a small square steel-wool pad into a soap solution, and let it dry, and found this product sold well to housewives. His wife referred to the pads as "S.O.S" for "Save Our Saucepans" believing (incorrectly) that the universal distress signal SOS meant "Save Our Ships." Mr Cox took on S.O.S (with the periods) as the name of his new product. The distress signal SOS has no periods in it, for obvious telegraphic reasons.

33928. Novato shooting suspects held at jai

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-11-21 19:16:23 UTC
From: Robert W. Sanford
Topic: 33928 Message: 33928

Here is the story about that shooting in Novato the other night:

Novato shooting suspects held at jail
By Jennifer Gollan
IJ reporter

Sunday, November 21, 2004 - Seven Bay Area residents were arrested in connection with the shooting of a Novato teenager at a local shopping center, authorities said yesterday.

The suspects, five of whom hail from Marin, were arrested Friday on suspicion of attempted first degree murder and suspicion of attempted robbery, Novato police said.

Last night, all seven suspects remained in custody in lieu of $500,000 bail each, according to jail officials. The group will be arraigned tomorrow in Marin Superior Court.

Arrested were Milton Garcia, 18, of San Rafael; Victor Cestoni, 18, of San Francisco; Oscar Chacon, 18, of Novato; Wendy Deleon, 18, of San Rafael; Lisabeth Resuleo, 18, of San Rafael, Juan Zapata, 20, of Richmond; and Estefani Aparicio-Navarrete, 18, of San Rafael.

The incident began around 10 p.m. Friday when a 17-year-old man was shot in his left shin in the parking lot of the Novato Fair Shopping Center near Taxi's Hamburgers restaurant at 927 Diablo Ave.

Novato police, San Rafael police, the California Highway Patrol, and sheriff's deputies from Marin and Sonoma pursued the suspects - who fled in a car - to an industrial area on the east side of Highway 101 near Smith Ranch Roach and Mitchell Drive in San Rafael.

The group was arrested without incident.

The unidentified victim was taken by ambulance to Marin General Hospital for treatment, said Novato Fire Capt. Robert Lacroix.

Novato police Sgt. Dave Bettin declined to release the victim's identity or condition citing his juvenile status.

Police declined to release details about what led to the shooting. Bettin said police are investigating whether the incident was gang-related.

"It is not a common thing in Novato," Bettin said of the shooting.

I know this is after the fact.

But just my 2c.

Incident command training says never use codes or phonetics

other than internationally recognized ones.

Obviously the LEOs have been using the correct phonetics for years

(not). It obviously makes sense when talking between agencies to

be as clear as possible in meaning when communicating.

But then again there is quite a number of codes common to most agencies.

If a code is a common one, brevity says, go ahead and use it.

If it is an obscure or code that may have more than one meaning, detail it.

If someone needs help in understanding a code (or a concept) ask!

Someone here will answer, just ignore everything else.

Coast Guard helo launched from Yerba Buena Island, CG advising for all
occupants to don their life preservers.

Just for info the Coast Guard Helicopters don't launch from Yerba Buena
Island. They launch from AIR STATION SANFRANCISCO located at San Francisco
International Airport. There are 4 HH-65A Dolphin Medium Range helicopters there.
The station is located on the North Access Road just before the the private
jet center. Their main freq is 381.1 Mhz and when on a case or mission they
would be on 157.050 Mhz (Marine 21A) or 157.100Mhz (Marine 22A). They do check
in with local airports for clearence to go through ceratin airspaces.

The Coast Guard "Dispatch" or Comms Center is located on Yerba Buena island.
They have numerous Transmitters or "High Sites" around the Bay Area
stretching from the mouth of the Russian River to Monterey to Lake Tahoe. I can't
name them all for security reasons but there are about 12 out there. They can
switch between sites so they can "hear" better.

Yesterday, I heard the Coast Guard dispatcher tell a boater who had run aground in the bay that he was not familiar with the San Francisco Bay as he was in the "Coast Guard Dispatch Center" in Newport Beach. The Coast Guard Dispatch Center then proceeded to call one of their San Francisco Bay auxillaries to pull the guy off the bar or wherever he got stuck. This was on the marine bands.

The Coast Guard's Communications Area Master Station Pacific (CAMSPAC) receiver site is near Abbott's Lagoon, and its transmitter site is near Bolinas, they have remotely controlled similar sites in Honolulu, Guam, and Kodiak, Alaska. Together, they handle communications for military and civilian vessels throughout the Pacific. These stations are, for the most part, HF facilities.

33936. 796D Audio Quality on Trunked Apco 25 Systems (San Mateo/Marin)

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-11-21 22:53:42 UTC
From: adamsjeffg
Topic: 33936 Message: 33936

I've had my 796D since about the end of August. I live in the South Bay area, and listen primarily to San Jose PD, SCC Sherrif, and local city PD/Fire. However, I do have the San Mateo system programmed, as well as the Marin County (MERA) system.

I'm extremely dissappointed in the audio on UHF P25 systems (the only ones I have near me). The amount of extraneous (and often times LOUD) buzzing and chainsaw sounds leads me to really really hope that Uniden will improve this radio, or I'm going to have to go over to the dark side :-) (the Pro-96 or upcoming mobile version).

Who else out there listens to either the San Mateo or Marin County systems? Have you simply gotten used to the chainsaw sounds? I'm really quite serious when I say that I'm surprised that this radio is as popular as it is. Does anyone know if Uniden is working on further software upgrades for this radio? Or, do other people have no problems with these two systems?

To give the radio credit, I will say that it sounds _fine_ on non-trunked P25 channels such as Santa Clara County Sherrif and San Jose PD. While they definitely sound "digital", they aren't hard to copy. So it seems that the problem is when P25 is combined with trunking (oh, also, non digital regular trunked systems are fine too, so it really seems to be the combination of the two).

Notes of interest - signal strength is, I don't believe, an issue. Both San Mateo and Marin come in 3-5 bars on the meter (for what that's worth).

Can someone who owns _both_ the 796/296 _and_ the Pro 96 comment on how these two radios compare when listening to trunked digital (P25) systems?

Thanks in advance. Maybe there's some simple adjustments I can make (I have _not_ fooled around with the "audio quality" settings, because _most_ of the time, the audio is fine. And even when the chainsaws come through, it's only at the _beginning_ of a transmission, and within 1/2 to 2 seconds, the chainsaw goes away and all is fine again.

-Jeff

Jeff

I have a 250, 796 and a Pro-96. I monitor both San Mateo and Marin. First to answer your question about the "digital noises" you encounter, I too am annoyed by these. Marin is the worst. However, my Pro-96 handles these annoying sounds and sounds the best of my three digital scanners.

33938. Re: [bayscan] 796D Audio Quality on Trunked Apco 25 Systems (San Mateo/Marin)

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-11-21 23:40:04 UTC
From: gary
Topic: 33936 Message: 33938

It sounds like you are describing a "framing" error, ie. the first part
of the packet data is missed and thus the decoder is fed garbage bits.
It would make an interesting experiment to pick one of the trunk
frequencies and park you 796D on that frequency (i.e. non-trunked) and
see if the chainsaw sound still occurs. [If you are parked on the
frequency, then the scanner would not missed the start of the packet data.]

FWIW, I went to the dark side (pro-96) after hearing sample clips of the
796D on the net. The nice thing about the pro-96 is the P25 decode is in
flash, so it can be updated.

Brisbane is part of North County Fire. They are NOT on the digital system.
They use 154.100 (control 21) and 154.01 (Control 25) check out
www.firedispatch.com for other frequencies they may use

I believe they are.. I was going to head over there when they called for the additional truck, but it sounds pretty well under control, but more of a PD Pow-Wow.

Requesting PD to respond a vehicle with 2 officers because one vehicle will need to be driven back??

I'm missing something.

Hey PY, I saw a photo of the frequency card from the HH-65 CG6502 based at SFO on google, and I was wondering if you could tell me what these frequencies are:

"Bigfoot" - 364.20 MHz --- I have no idea what this one is. I'm guessing military obviously.

"129th Air Rescue" - 390.0 MHz

"Golden Gate Traffic" - 124.30 MHz --- This one's really got me curious because I'm really familiar with every NCT/ZOA sector (Haha uh oh aviation abbreviations! - That's Norcal Terminal Radar Approach Control in Sacramento and the Oakland Air Route Traffic Control Center in Freemont, both owning airspace around the bay) and I haven't seen this frequency before. I know Los Angeles Int'l has a VFR Special Flight Rules Area that has its own traffic advisory frequency, and San Diego has a VFR cooridor... Could this be something like that or just mainly coast guard? I'm guessing the latter because that frequency isn't on any of my aeronautical charts.

Finally, OT - I used to live in Inverness, and my best friend's ranch owns half the land around Abbots Lagoon, so we'd ride dirtbikes near the receiver towers for CAMSPAC. I didn't know what a key site that was for the USCG until recently.
I've driven by the transmitter in Bolinas too, just didn't realize they were connected.

- Inigo

http://home.cfl.rr.com/scanner/brev1.htm and a number of other sites have
it as NORAD Oakgrove.

>"129th Air Rescue" - 390.0 MHz

That's about all I could find referencing 390.0 is that it's the 129th
Rescue Wing of the California Air National Guard:

Tough to say with Yahoo. You could have sent it yesterday and it's just now showing up. I didn't bother to check here first.

> This thing must be really cooking, Truck 1 has their basket up doing
>ladder pipe operation. IC asking for a Fremont Engine up to the fire now.
>low water pressure isn't helping things much

We've got our Captain on scene, the Chief enroute (not sure of his ETA), and a page to our volunteers. Engine 12 just left the station, probably about a 7 minute eta down the hill, and should have some volunteers showing up soon. If this goes to a 3rd, I might head up for some pictures, otherwise I'm a good 20 minutes out (no code 3 for vollies in their POV's).

We're using White-1 also (154.280) for TAC.

Gotta love VHF/ UHF interoperability.

Mike,

We've got a Wolfsberg in Henry One that covers from 30 mMz to 969 mHz. It can be programmed by the crew for repeater input/output frequencies and CTCSS/DCS tones. It cost us a ton of money. I forget the exact amount but it was over $5000 about five years ago. The problem is that it won't do trunking and won't do digital. On the Marin detail, we were only able to talk to the Marin units using the analog UFH-T band mutual aid frequencies.

I keep hearing about these "black box" patches that will allow units on different freqencies and bands to to talk to one another. Being a technical dufus when it some to the inner workings of radios, how are these set up, how fast can they be put in operation, and can they allow users with non-trunked, non-digtal radios to talk to units on their normal digital trunked frequencies or only on analog simplex frequencies? Is this patch something that's portable, needs to be already in place, or can it be done on the fly, to coin a pun? <g>
Also, are these patches set up by the requesting agency or can they

be set up be the responding agency? With all the money this Wolfsberg cost us, it would be nice if there was a fast, reasonably priced way we could be able to use a trunked and/or digital system without a lot of preplanning.

Regards, Jim

Ed,

First, my deepest sympathy to you and the family and friends of Corporal West. I know how this must have affected you with Matthew about to go into basic training at a time when we're at war and the Marines seem to be bearing the brunt of the fighting.

Second, it takes some guts to step forward and apologize when you realize you may have offended some people. Your explanation makes your responses easier to understand and I, for one, accept your apology in the spirit it was meant.

3rd alarm for Milpitas is a mutual aid request.

You won't hear it on their primary dispatch.

Probably the ALCO trunked system or Santa Clara County RED for
a San Jose request.

<SNIP>

Jeff,

We have a 785D in our command post that just had the digital card installed. As far as I know, the digital card is the only difference between the 796D and and the 785D. We experienced the same buzzing noises that you do when monitoring MERA. As you wrote, it's only in the first few seconds of the broadcast and adjusting the audio quality did nothing to stop these noises. I had my Pro-96 with me and the difference as like night and day. I would occassionally pick up about a second of "donald duck" sound at the beginning of a broadcast but it was nowhere near as loud or irritating as the noises on the 785D. The sound quality in general was better on the Pro-96 when monitoring MERA, with the voice quality being clearer and less robotic sounding.

Bearcat has pretty much had the mobile digital market to themselves since no one else made a mobile digital scanner. We'll be taking a serious look at the RS 2096 when it comes out to see if the digital quality is the equal of the Pro-96. If it is, we may end up getting one and relegating the 785D to non-digital monitoring since the noise from the MREA system is going to drive our dispatchers nuts. It's a shame, really, because the 785D has such a nice display and the non digital performance is at least as good as the Pro-96.

Regards, Jim

From: Dave H.
Topic: 33969 Message: 33969

Any body know what SNRF 175 is?
I had an undercover ford explorer come in yesterday to get some work done. It had the usual array of law ennforcement radios and things. On the primary radio it said SNRF 175. I asked if he was with a fire agency (knowing full well that he wasn't) just to see if he might give a little information, but he kept his lips sealed. I'm thinking maybe FBI because I'm right next to the San Rafael FBI office but that's just a guess.

Thanks, Dave

No idea. But a google search for that address shows a class of 1968 Alumni
and a phone number.

No, I am NOT going to call it.

My guess is an apartment complex?

What other equipment? RF could be Regional Fire. Did you see if the lights
were red/red, red/blue, etc?

<E> plates?

I don't think it is an apt. bldg Usually , you hear them talking about extension into other units or floors during apt. bldg fires. Maybe a fourplex or sixplex (small apts) but I get a feeling this is a large house . They seemed to abandon the C side of the stucture due to collapse fears.

IC said still using some Master streams and 5 handheld lines..

been a hard fire to fight , no " breaking news" that I could find on either KNTV, KRON or KGO .. maybe tonight :-) hope someone has video of it.

Yep it's military. BIG FOOT is a the tactical call for NORAD's Western Air Defense Sector (WADS). 364.2 is the nationwide Airborne Intercept Control Common (AICC). On it, you'll frequently hear BIG FOOT issue simulcasted warnings to "unknown rider[s]" (unidentified aircraft) and you'll hear them contacting military aircraft (including the USCG and 129th RQS).

I've seen this listed for the 129th Rescue Squadron (RQS) and Rescue Wing (RQW) at Moffett, but I've never personally heard anything on it. They commonly use 390.9. Maybe someone else can explain why.

124.3 is freq utilized by low-level aircraft over the SF Bay itself (specifically SF-Oakland I think). I can barely receive anything on it, so rarely monitor it. Again, maybe someone else can explain it better. But this points you in the right direction.

According to Firescope, "SNR" is the three letter fire mutual aid designation for San Rafael Fire.

www.firescope.org and click on ICS->Free Downloads->MACS->MACS 410-2

As for what this Explorer was, who knows. Any chance it was a chief's rig?

hi jim...

Raytheon makes several of the cross-patch devices out there. They range
from 4 to 8 channel (and up i think) models. check out their website.
i've already used one of them... in a nutshell, they definately can do
the job so long as they're configured properly.

Well, hopped in the car and headed up 880 from Santa Clara. I could see flames and smoke as soon as we hit north San Jose. Bummed out because there was so much fire equipment up there that the road was absolutely clogged! Access was less than favorable and never could get close enough to do any photo work. Decided to bag it and head to a birthday party at the Elephant Bar in Fremont.

DANG! This was a significant event as there was still a lot of smoke coming off of it almost two hours later.

Sorry I couldn't get y'all some visuals!

I believe they are.. I was going to head over there when they called for the additional truck, but it sounds pretty well under control, but more of a PD Pow-Wow.

Requesting PD to respond a vehicle with 2 officers because one vehicle will need to be driven back??

I'm missing something.

Yes and no. You'll hear the occasional chit chat. But that's not what it's designated for. There is a helo air-to-air common freq, but I can't remember what it is.

It's some simple freq like that, such as 123.0, 123.4 or something so
easy that you forget it. ;-)

From my old flying days...
123.45 was the air-to-air freq

"Yes and no. You'll hear the occasional chit chat. But that's not what it's designated for. There is a helo air-to-air common freq, but I can't remember what it is."

From what I get it's something like that. It seems to be a freq to let other helicopters know where they each other are so they don't crash into each other. You might hear something like this : Golden Gate Traffic this is Coast Guard Helo 6591 enroute Golden Gate bridge at 500 for SAR case. Then you would hear another helo say : 6591 this is 810AM got you at my 3 o'clock. Then they might throw some chit chat after that. Mabey what's going on or have a nice day or whatever. There is no "Tower" or someone whatching a radar somewhere just some sort of notification so they see each other.

Hey Evan,

Hog Island Oyster Farm is in Tomales here in west Marin. Highway 1 is big with the motorcycylists because of the scenery and miles of turns. Lot's of accidents...especially on Sunday's.

Hello Jeff and the Bayscan group,

I have been pretty much handling the MERA TG list of late but I have been dealing with my number one priority of late and that is to find a job. Unfortunately, listening to my scanner and updating the MERA TG's has dropped way down on the priority list as a result of my job search. I also have another little problem and that is I'm sending my 296D back to Uniden in Texas to have the Remote to PC plug repaired. I "accidentally" <g> pushed the little contact prongs back to where they don't make contact anymore. Long story short I'll be MERA\Digitally handicapped for a couple of weeks....sniff sniff.

If anyone on the list wants a copy of everything I have MERA TG wise including 3 or 4 Butel TG log files please feel free to contact me off list and I will send you a copy in a .ZIP file. I will also include a copy of Ed's MERA TG Excel file in the .ZIP file At some point in the near future hopefully I will as promised combine my MERA TG Word document with Ed's MERA TG Excel document but I just dont have time to concentrate on that right now.

I do have some trusty old scanners such as my Pro-43 so I'm not completely without. :-)

Thanks for understanding.

-Roger

Anyone know of a new list of Marin MERA talk groups? I posted the above a few weeks ago - anyone hearing these besides me? Or know what they are?

Thanks in advance,
Jeff

34009. Milpitas Fire Story

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-11-23 00:33:26 UTC
From: Craig Rose
Topic: 34009 Message: 34009

Fire destroys large Milpitas home

WIND DROVE FLAMES `LIKE A BLOWTORCH'

By Chuck Carroll

Mercury News

A three-alarm fire destroyed most of a three-story home in the hills above Milpitas Sunday afternoon, and a fire battalion chief said he was pleased that there was no damage to neighboring property.

Milpitas Battalion Chief Scott Brown said the house fire at 1641 Pebble Beach Court was called in at 4:35 p.m.

When flames got outside the structure and were hit with 40 mph winds, the house ``just blew like a blowtorch,'' he said.

Fire retardant roof materials and other building code requirements in effect in the hills may well have prevented the fire from spreading to houses as little as 50 feet away.

``The building requirements really came through,'' Brown said.

The family was away from home for the day, and called 911 when they returned to find the house filled with smoke and the sprinkler system on.

Heavy smoke and fire was pouring from the rear when firefighters arrived. They quickly called a second alarm, and then a third when they grew concerned about the wind.

About 50 firefighters from Milpitas, San Jose, Fremont and the Spring Valley Volunteer Fire Department responded to the blaze, which took three hours to control.

This afternoon, investigators were carefully picking through the partially collapsed home in search of both the origin and cause of the fire, which did not appear to have started outside, Brown said.

The estimated property loss was put at about $2 million. There were no injuries, but the family was assisted by the American Red Cross with food, shelter and clothing.

Not sure if it's related, KRON 4 said that an SFPD officer had been hit by a vehicle and that their partner fired shots at the driver. They did not give a location or condition of anyone that may have been injured, only that they had a crew on the way. I've only been monitoring SF fire, as usual, so I don't have anything further on this.

34034. Bomb Squad on Sky Oaks Rd, Fairfax, CA

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-11-23 22:16:19 UTC
From: inigo4688
Topic: 34034 Message: 34034

I just got this from several sources... Apparently Marin Municipal Water District found a "device" behind "headquarters" on Sky Oaks Road near the Alpine and Bon Tempe Lakes.

He reported it on the water district's freq: 48.38 MHz

I also heard the sirens pass by about five minutes ago. Someone with a digital scanner help! It'll be a MERA talkgroup, that's all I know... It's sounding like it may be a false alarm but you never know.

-Inigo

P.S. If you want to see the location plug the street info into mapquest.

34035. Structure Fire in San Rafael

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-11-23 22:25:55 UTC
From: inigo4688
Topic: 34035 Message: 34035

More excitement in Marin. Didn't catch any units except Ladder 55, they're saying it might have been an air compressor fire, and they're investigating.

Control 16 - 46.20
Control 6 - 46.50 (Moving units around to cover)

and as I'm writing this it looks like fire's out. San Rafael is cancelling units.

http://www.handguncontrolinc.org/hci_catalog2.htm :)

and

http://www.handguncontrolinc.org/hci_catalog.htm - the Tali-Ban looks funny.

Hey look through all the pages. Good funny stuff there.

Also, off topic (well, kind of) I read a law in South Carolina I believe made it illegal for businesses to not allow employees to have their guns in their car. Yes, no longer can your employer say "No guns allowed AT ALL" - they simply have to let you have your gun in your trunk.

Should be obvious when a exit interview is about to be conducted - the boss puts on his flak jacket.

The

Evan

Ahhhhh Don't forget, thanksgiving is when the "real" Americans stopped slaughtering the Native Americans just long enough for them to say, "Thanks." (sorry for the off-topic post) Happy listening to all y'all to the 5150's, 415's, 647f's, 23152's, 10-56's, and happiest of all the 1144's.
God help my cynicism. Love Dave

34062. Thanksgiving

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-11-25 20:10:50 UTC
From: Scanner 4
Topic: 34061 Message: 34062

Blonde Thanksgiving

A young couple got married, and when the young blonde wife prepared to bake a ham to celebrate their first Thanksgiving she carefully cut off each end before placing it in the pan.

Her husband asked her why she did that and she replied, "I don't know--it's what my mother always did. But I can ask her."

She called her very blonde mom, who responded, "I always saw your Grandma do it, so I did the same."

They decided to check further, so the young bride and her mom then called their brown-haired Grandma, who explained, "It was the only way I could get it to fit into my pan."

34063. The last one

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-11-25 20:12:31 UTC
From: Scanner 4
Topic: 34063 Message: 34063

A young man named John received a parrot as a gift. The parrot had a bad attitude and an even worse vocabulary. Every word out of the bird's mouth was rude, obnoxious and laced with profanity.

John tried and tried to change the bird's attitude by consistently saying only polite words, playing soft music and anything else he could think of to "clean up" the bird's vocabulary.

Finally, John was fed up and he yelled at the parrot. The parrot yelled back. John shook the parrot and the parrot got angrier and even ruder.

John, in desperation, threw up his hand, grabbed the bird and put him in the freezer.

For a few minutes the parrot squawked and kicked and screamed. Then suddenly there was total quiet. Not a peep was heard for over a minute.

Fearing that he'd hurt the parrot, John quickly opened the door to the freezer.

The parrot calmly stepped out onto John's outstretched arms and said, "I believe I may have offended you with my rude language and actions. I'm sincerely remorseful for my inappropriate transgressions and I fully intend to do everything I can to correct my rude and unforgivable behavior."

John was stunned at the change in the bird's attitude. As he was about

to ask the parrot what had made such a dramatic change in his behavior,

the bird continued, "May I ask what the turkey did?"

HAPPY THANKSGIVING!

Ben, Nina and the rest of my somewhat voyeuristic (audio that is) scanner pals -

Just to prove the point...about an hour ago, there was a CODE 3 fill request from an SJPD officer in the emergency room at Santa Clara Valley Medical Center for a subject that had gone bonkers (technical term) with two AMR employees assisting the officer in attempting to restrain the guy.

Apparently this fella had embarked on a 5150 (California Welfare and institutions Code for danger to self, others, or gravely...well, you know) enhanced 10-51 (intoxicated) experience which finally led to the application of four-point restraints.

Chalk up another memorable Thanksgiving for members of the SJPD, AMR and one disturbed patient at VMC. :^(

This must have been somebody just putting around their neighborhood. I usually only see people riding their dirt bikes or ATVs around the neighborhood with no helmet. They think "Oh, I'm not going very far, what could happen?".

(I put about 7,500 miles/year on my motorcycle. I won't even ride around the block without *full* riding gear, including armored overpants.)

UPDATE - 211 ARMED

Now appears to be a BMA wearing a black mask, black baseball cap, blue jeans, armed with a black revolver and a black briefcase. Vehicle involved is a four-door green Ford Explorer that was last seen eastbound Stevens Creek from the Bank of the West.

Now being told there were NO transmitters taken (possible dye pack only) during this heist.

Take is $50,000 in mixed bills.

Being handled on SJPD 2 - 460.275

I'll let you update, I've gotta run out for a bit, but sounds like they're
11-96 (high risk traffic stop) with the vehicle, SB 101 missed the cross.
Vehicle is possibly stolen. Take was $50k.

This traffic stop was on a green Ford Explorer, but it is not related
according to units on the stop. Still monitoring for any additional updates.

The occupants were an Asian couple with a kid. What I don't get is that
the initial description said there were no plates or the getaway
vehicle, yet SJPD still followed it and this Explorer _did_ have plates...

It's easy enough to throw on or remove plates to fool police.

Just imagine robbing a bank, and having 'velcro' plates. People see a
vehicle with a plate as you leave, you turn the corner, rip the plates off
- you'd get away scott free.

Or the other way around.

Just heard: SJPD officer comes up on channel 2 advising he's working a suicidal person @ Bascom & Moorepark. Cover units requested, dispatch asks for further (no other units on scene yet). Dispatch asks method of suicide, officer advises subject wants to jump off the freeway. Officer quickly responds that he has pretty much talked person into custody. Another call comes in nearby for a disturbance at Goodwill - suspect wearing grey jeans. Dispatch asks if this matches the description of the suicidal party - officer responds "No, my subject is wearing a blue jumpsuit.... Uhh pardon the expression."

Some of the best howlers are to be heard on the simplex or otherwise tactical frequencies that don't have a control station (dispatcher).

During an undercover prostitution sting in San Jose on Ch. 11:

Officer 1: I'm having trouble hearing the music [body wire], I think her [decoy] battery is getting low.

Officer 2: I'll make like a john and bring her a new one; there's a hidden parking place at the Arena hotel we can go to for a couple minutes

Officer 1: Isn't that a little long for you?

Also, after several hours of "no change on point" stakeouts, I've heard officers literally start telling jokes just to keep themselves amused...

Monitoring a shooting/weapons call on SJPD channel 3 (460.200)

This call is at, or near 163 Gramercy Place with PD having difficulty locating the victim, but with multiple witnesses claiming they saw a teen shot in the arm. In addition, one car (victim present) was also hit by gunfire.

SJPD sending unit to Alexian Bros. Hospital to check on any victims.

No further on this one unless events warrant.

sure, trump doesn't have the issues with money that most of us do, but
by leasing he can stay in the newest chopper. besides, it may just be
easier since the leasing company may cover the maintenance and upkeep of
the chopper with the payments. if he owned it, he'd have to pay for
more than just a pilot... ground crews and upkeep can get expensive.

34108. Novato two alarm fire summary

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-11-28 06:33:36 UTC
From: nina zhito
Topic: 34108 Message: 34108

Bay City News advises that Friday night's two-alarm fire in Novato destroyed one home and badly damaged another. Novato Fire Department responded to reports of an explosion and several buildings on fire at 600 Santana Road around 2:33 a.m, where fire crews found two two-story homes, a garage, and two cars burning. The fire was under control at 3:29 a.m., according to the fire department, and the two families that lived at the homes were displaced and are being provided temporary shelter by the American Red Cross.

Close to $750,000 of damage to the structure and contents of the two homes is estimated.

The fire began in the garage of 600 Santa Road when the occupant was cleaning parts, according to the fire department. He attempted to extinguish the fire using a portable fire extinguisher, and rescued his family prior to the fire department's arrival,

There is a lot of these with current frequency discussion on the BAIRscan
yahoo group.

I believe there are also csv files in the files section.

Lately, i have seen the Saturn Blimp over the Bay area (everywhere).It seems to be up almost everyday and night too. Has anyone ever captured any freqs for this airship? It is based out of livermore airport. So would they operate on reg air freqs? should I keep an ear out for the Livermore tower for any and all comms? Thanks

34113. S. Bay multi-agency pursuit this evening

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-11-28 09:33:28 UTC
From: IAPPS Director
Topic: 34113 Message: 34113

Surprised nobody posted about this.

I was out driving and couldn't.

Happened around 1900 hrs.

Santa Clara Co. Sheriff had about an hour long pursuit all over the south bay involving, in no particular
order:

Sheriff
Los Gatos PD
Campbell PD
San Jose PD// multiple districts
CHP Helicopter 32
CHP Ground units

Multiple spike strips were deployed, only one of which caught a single rear tire which deflated, and the
pursuit continued at 50 mph on the metal rim for another 15 minutes.

SJPD called a PITT maneuver (basically ramming the car to the curb) after he went reckless driving the wrong way on Capitol Expwy.
and Sheriff pulled out. Don't know if they actually did it, or vehicle stopped on it's own.

End result is two in custody.

It turns out vehicle was stolen and had plates that are clean but not reported stolen, and perps. are the
suspects in an armed bank robbery in San Jose from earlier in the day.

Way to go good guy's....

I spent the holiday with family down in LA. I brought my 296D, naturally. I mostly listened to LAPD.

My goodness is it ever busy down there! I'm not talking about the small stuff. I'm talking about shootings, armed 211's, stabbings, and more. It sounds like a war zone. My radio was never quiet. We were involved in a fender bender. The other party was completely irate--yelling, screaming--even to the point that the guy wanted to fight my dad. (Major mistake!). The LAPD was so busy, they refused to come. But, with 3 of us in his face, he finally calmed down and came to his senses. LAPD's refusal must force many people to take the law into their own hands.

LA definitely has no lack of post-worththy traffic. You couldn't pay me enough to live there.

34116. Re: Saturn Blimp over bay area

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-11-28 17:52:34 UTC
From: gariac450
Topic: 34112 Message: 34116

It says "relay" on one side and "Saturn" on the other. I've only seen
it over the Pleasanton/Dublin area.

I think you would have to track the blimp from a take-off and hope
they call out the frequency changes (handoffs).

Maybe 123.45Mhz?

One of their functions is to provide video from over the local football games. They were over 3Com yesterday afternoon on an apparent practice run and I bet they will be there this afternoon for the 49er game. They also fly over the Oakland Coliseum for the Raider games. Today listen for them on NorCal freq 135.1 with the ID as "airship (tail number)".

"Relay" is the name of Saturn's new combo SUV/Mini
Van.

Did anyone grab the pro-83 on sale(59.99) at the one day after-thanksgiving sale at The Shack? Pretty cool radio for the price. it has the new "signal stalker" feature. I have been playing around with it a little here and there. works really well.

Yes! I went to Radioshack Friday morning and picked up 4 Pro-83.
couldn't pass up the great deal. I'm keeping two for myself and two for
Christmas present.

It's a cool unit for conventional freqs.
it also has a BRIGHT background orange light!
plus the Signal-Stalker works great too! (that why I got it)
plus it only use two AA batteries.

People are probably drunk and mad because they are quickly realizing that the 49ers are the worst team in football (& I'm a big time 49er fan). Look for some road rage calls to go out on CHP's frequencies after the game due to the frustration that is the San Francisco 49ers...

Nick in Santa Rosa - 15:48 Hours

Well I missed it again.(pro-83)
I was up in the mountains for Thanksgiving.
Anybody have any idea when it might go on sale
for around that price again?
I checked in with the local RS managers before leaving
and they were not aware of any upcoming sales
(so how do people on this group get the info?).
Tnx and happy holidays

Been there, done that--spent about 15 years on and off in a variety of locations in SoCal. I was working in Santa Monica when the Rodney King riots happened. Three weeks later I started a new job in San Jose :-)

Comparatively, San Jose was and still is a quiet little hick town (except now the traffic is as bad as I remember it in LA then.)

Yup. I initially grabbed it when it went on a 'hidden' one day sale a few
weeks ago. I went to return some stuff, and inquired, and when the guy said
"No.. it's not $119, it's $55" that was a big SOLD for me. :)

Address is 912 and 914 something. (FD advises gas shut off to both addresses, 912 and 914. Could be apartment #'s too).
Dispatch advises 10 minutes elapsed on scene at 0616, however I didn't hear FD on scene until maybe 0611 with AMR Med 7 being first.

PD was on scene first however so that's gotta be it.

Fire in the attic.

very interesting article indeed. I would think the IAFF will pass this story on to politicians where brownouts are occuring , like SF for one. I hope everyone knows its not only SF, Berkeley is browning out T2272 from 1800 - 0800 everyday. South County E13 (San Carlos) is unmanned. Redwood City E9 is out of service 180 days per year. I am sure there are more.

I am slowly building up my .p96 files for the Bay area. I started on my AlCo config. First question, is does someone have a /p96 config they can post? I have frequency and TGID information from Kelty & RR.com, but would be interesting to see how someone else has laid out the system.

The next comment is that the system doesn't sound very 'clean'. I was monitoring on my Pro-96 on a drive from Milpitas to Oakland. There seemed to be a lot of hiss and static. Not as clean/clear as other systems I have monitored.

So question for the group, is this common? Is the ALCO site poorly maintained??

So how well does 246 perform in Bay Area? Are you seeing a lot of
'close call' hits? Does it do well with trunking in the bay area?

I remember that Alco uses over 300 talk groups. Maybe SF is around
200. The 246 has a limit of 200 TGIDs per system.The dynamic memory
of the 246 is interesting, but still might be limits on configuring
these large bay area TRSs.

geez , 200 TGs is pretty good I would say. Do you REALLY need more ? Remember , it gives you 200 systems , so if you really want ALL those TGs , you can set up 2 systems for Alco or another large system.

Was so busy monitoring , didn't get a chance to use the close call yet , will do so in the next few days. I programmed it by hand (so far) so it took some time. I went thru SF today with it and it got the TRS fine . Same with Sacramentos' TRS , both city and county.

I have Santa Clara , San Mateo , SF, Oakland , Alco , North Bay ((Napa, Sonoma , Solano)), Contra Costa , Sac County, Sac City , Washoe(NV) County , CHP, BART systems loaded and I split San Mateo and Santa Clara systems into FOUR systems 1- police and 1- fire for each county . So I have in fact 14 systems. To be fair , not FULLY loaded with tons of stuff in some, but still gives me almost the same as I have in my 796s and 296 and I still have only used 23% of the memory.

I will post a better review at a later date.....btw, Glenn at SU says he still has some available.

Hi and thanks Ed. Well, if it's any help, I do have two BC245 scanners which are pretty accessible. I mean I can program conventional and trunked stuff, can lock on or recall conventional frequencies and trunked talkgroups by storing data in my little speech output notebook thing. So if that can be accomplished on the BC246 without seeing the display, then maybe??? I can use one. The thing to keep in mind is how controlable it is from the keyboard without havving to "Scroll" through a bunch of menu crap to get stuff done. Thanks for any help Ed. 73's, Jim

Date: 2004-11-30 05:08:03 UTC
From: Bob Underwood
Topic: 34120 Message: 34155

I picked up one of the half-price PRO-83; seems like worth that price, marginal at regular price. Finally found the 20-289 Interface cable ($25 ripoff), but not sure what software to use with it. I downloaded "Scanner Loader", but it doesn't seem to support the PRO-83. Looked through the files section of Bayscan and Strong Signals, and don't see anything suitable. I'll ask at Radio Shack tomorrow, but not expecting much help from there (You have questions, We have blank stares).

Can anybody help?

hmmm, that may be difficult. LOT of menu-driven stuff on this one, more
that the 780,796 etc and there are NO numbers i.e no channel numbers , just
system and group numbers , its definitly different than prior scanners. hopefully
I will get an answer to your question

Not a bad deal for a scanner and frequency counter at $120!

> Finally found the 20-289 Interface cable ($25
>ripoff),

Most serial to 2.5mm jack adapters will work or can work with an adapter.

Have you priced 2 way radio cables?? $25 is a steal. Or just porgram it by
hand.

>but not sure what software to use with it.

http://www.scancat.com/ is all that's out there now.

Here is what I have for the Westfield Shoppingtown Oakridge in San Jose:

Mall Security 464.8250 D516
Mall Maint/Housekeeping 464.9625 D516
Macy's West Security 461.7625 D251
Century 20 Theaters 467.8500 77.0
Target 467.7625 (unknown)
Old Navy (Headsets) 154.5400 74.4
Sears Security 461.1625 151.4
GAP (Headsets) 154.5150 74.4
Starbucks (Drive-thru) 457.5125 (unknown)

Traffic has picked up considerably since the major renovation was
completed a few months ago.

-Johnathan

Funny, I asked if they had the Digital radio in stock but they did know anything about it? Offered me a free phone though! (With activation on a two year commitment-blah blah blah!) I think that is the same radio I picked up on Thursday. $59 kinda stout silver radio with "Signal Stalker".

I got an off list post from Jordan who thought I should try a computer program to load it like the way I do with my VX5R Yaesu. That's the only way I can program that rig and it works for me. It just depends on how "Speech Friendly" the software is with my screen reader. Thanks, Jim

Ed, I'm hearing Mill Valley on 46064, not 46046. Not sure about Tiburon and Sausalito though. I think someone said last week that they are still using their old freq - 39.88 or 39.82 or 39.8 or something like that untill the new Tiburon antenna gets built.

ALCO has multiple transmitter sites as shown below:
=====
site 2 S RED HILL COYOTE RANGE Fremont
site 3 3800 FT N OF 2000 150TH AVE SAN LEANDRO
site 4 1401 LAKESIDE DR Oakland
site 8 (no location given)
866.15 866.425 866.625 866.8 866.9375 867.15 867.25 867.4 867.675
867.925 868.0875 868.275 868.4375 868.65 868.7625 868.925

site 5 WALPERT RIDGE Hayward
site 6 sunol ridge
site 7 crane ridge livermore
866.9375 867.4 867.925 868.0875 868.7625
======
The 2nd batch of channel are all high altitude and probably come in
clear, while the first batch sites are not as well situated.

On the smelly old 235 and 245, where you had to program all
frequencies rather than the control channel, some people claimed you
could just use the high level sites. [I never tried this.]

I noticed that two of the high level sites are listed as alternate
control channels, but now I wonder if one of 866.9375 867.4 is always
a control channel since the listener might be in a spot where he/she
can only hear the high level system.

This would be a good spot for Wayne to jump in.

Thanks Evan, downloading the Scancat demo right now; I think I'll ask at Radio Shack before I buy on-line, but will be very surprised if they can comprehend the question. Yes, I've considered commercial radio cables and programming software; a real nightmare situation, and I agree, in that context the $25 IS a steal. Rhetorical question: why do they all have to be DIFFERENT? I think I've got 4 different Icom programmers (all from RT systems), and they won't even share data files. (I don't expect an answer)

And yes, I had considered programming by hand; I did the first bank so it's usable, but it's so much easier to keep track of with the computer.

Thanks again.

From: Tim Lynch
Topic: 34169 Message: 34169

At 6am Sutter EMP: will start a one day (5 by Lockout) Strike.
Private Security has been beefed up at all Sutter Hospitals.

Scanner Owners should have some interesting listening during the
strike.

Programing to some of the following should help with Reciving this
history breaking event.

(Local DOT frequencies) for Security
(FRS) Channels, one Local 707 has been passing FRS radio's to
higher members for passing on information at the lines.
(Local Law Enforcement) Limited to public areas and traffic
control, Santa Rosa Police have increased shift changes for morning
and afternoon commutes.
(Local News Remotes) Remote network feeds should be active during the
first Day due to a Bayarea wide strike your local feed would be the
best bet, no need for them to setup out of area.

Thats a few I came up with if you have some other Ideas let us know.

Will leave the politics for another group.

UPDATE - 211 armed at Valley Credit Union - 70 West Hamilton Avenue

Suspects (two BMA) last seen on foot wearing one red and one blue bandana over their faces and carrying money bags on foot.

This is working on Campbell PD - 482.4625 and SJPD-2 460.275

Notification being made to FBI. This may be a 211 by same suspects from another heist in San Jose earlier today.

Looking for Xmas money?

From: aviationplusphoto
Topic: 34180 Message: 34180

I am told the Radio Shack has the cable and software for the PRO-83 in store for $25.00 ?
Also the sale on Friday was not only instore but online, but the online site did not say the sale was supposed to be only 0600-1200. The store in Sunnyvale sold out before 1200 and called other stores for more and San Antonio store sold out before the SV store. They were going like hotcakes!

Does anyone know why the PRO-83 instructions say to plug in the connector from the AC/Recharger adapter into the radio 1st then plug the adapter into the wall power outlet in that order? And in reverse when unpluging from power outlet. Inotherwords do not unplug connector from radio while the adapter inpluged into wall power.

Buddy

Hi Guys,
Does anyone have, used or know of an evaluation on the new MAYCOM FR-100 handheld scanner? It covers the 66Mhz-88Mhz, 88Mhz-108Mhz, 108Mhz-137Mhz, 137Mhz-174mhz and 420Mhz-470Mhz.
I would appreciate any feedback or critial evaluations on the radio or where to find some.
Thanks, Buddy

Topic: 34180 Message: 34182

I'd love to hear anyone's review of the PRO-83's Signal Stalker functionality, as compared to, say, an Optoelectronics Scout 40.

Per the online manual for the PRO-83, the Signal Stalker feature has several capabilities over and above the Scout:

1) Built-in "reaction tune" (Opto's term, not RS) - the Scout can do this with certain external receivers via a cable, but the PRO-82 has it in one unit. This is the ability to tune to the detected frequency and listen to the signal in realtime.

2) Selectable band - if you are only hunting for signals in one band, you can set the PRO-83 to that band. The Opto is an all=or-nothing affair. (This probably just means that it won't "report" it if it finds a frequency outside this band; but maybe it also enables a pre-filter, which would be very nice.)

3) Frequency lockout - a particular annoyance on the Scout is not being able to shut the damn thing off when it gets FM, TV, or other strong signals not of interest.

Anyway, frustrations aside, I love my Scout, and it's now permanently installed in my SUV with an external antenna. I'd pick up a second one for portable use, but the price isn't right. I've tried out a friend's Opto Explorer, which has the built-in receiver (and which is even pricier), but the front end is terrible--intermod, images, etc., especially in an RF rich environment like San Jose.

So, any recent PRO-83 users care to comment on the Signal Stalker performance? Bonus points if you're a Scout owner too :-)

-Johnathan

That's the cable only. Unless there's something new, there is no software
for it yet.

> Also the sale on Friday was not only instore but online, but the
> online site did not say the sale was supposed to be only 0600-1200.

Hmm.. When I looked Friday, it still was $119?

> The store in Sunnyvale sold out before 1200 and called other stores

Yep. Some stores sold out before 7 AM.

My guess is a safeguard. I've seen a small spark on a few devices when
plugging the adapter into the device if it's already plugged into the
wall. Granted, this is only really on my Maha universal charger, but ....

(is anyone REALLY going to do this???)

From the avshop.com website:
This lightweight, durable transceiver is great because it's so easy to use. Displays both the memory channel and the channel frequency -- keeping you aware of what's going on around you. Since this only receives and doesn't transmit, it's not designed for backup radio use, but it does borrow high-end features from aviation-grade transceivers costing hundreds of dollars more.

what high end features? Looks like a scanner that's a PITA to program with no keypad! It's $140ish. At that price, I'd take the Pro-83 at the retail $119, unless there's something I'm missing (I can't recall if the 83 does those bands).

Thanks for the respectful post, Dave! ;^)

Bit of an update on this 211.

Suspect last seen walking away on Aborne. Described as 5'6", thin build, WMA or HMA, wearing a khaki baseball hat and black pullover sweater with light growth of beard. No weapon seen - demand note only, never spoke. Money was shoved into pockets and the "T-TOM" was not taken.

Partial list of units on scene includes:

57P6
51P4
51C4
51P3
9101
5071

~>Robbing a Walmart and stealing the x-box is only a misdemeanor.

Robbery is robbery (211 PC) and is a felony in CA as well as federally. The FBI gets involved because of the FDIC. Shoplifting can go either way depending on the value of the item stolen. The last time I saw an X-Box they cost around $150-200. That would be a misdemeanor (488 PC, Petty Theft). If the value is more than $400 then it would become a felony (487 PC, Grand Theft). If the investigating officer reasonably believes (can prove) that the thief had the intent to steal it prior to walking into the store, it then becomes burglary (459 PC) and again is a felony.

Mike

P.S. What ever happened to the good ol' days when it was called larceny, not theft?

You may be right that it's a felony, but 459 doesn't mention anything about a store - it's residential or floating house:

459. Every person who enters any house, room, apartment, tenement, shop, warehouse, store, mill, barn, stable, outhouse or other building, tent, vessel, as defined in Section 21 of the Harbors and Navigation Code, floating home, as defined in subdivision (d) of Section 18075.55 of the Health and Safety Code, railroad car, locked or sealed cargo container, whether or not mounted on a vehicle, trailer coach, as defined in Section 635 of the Vehicle Code, any house car, as defined in Section 362 of the Vehicle Code, inhabited camper, as defined in Section 243 of the Vehicle Code, vehicle as defined by the Vehicle Code, when the doors are locked, aircraft as defined by Section 21012 of the Public Utilities Code, or mine or any underground portion thereof, with intent to commit grand or petit larceny or any felony is guilty of burglary. As used in this chapter, "inhabited" means currently being used for dwelling purposes, whether occupied or not. A house, trailer, vessel designed for habitation, or portion of a building is currently being used for dwelling purposes if, at the time of the burglary, it was not occupied solely because a natural or other disaster caused the occupants to leave the premises.

The key words here are "or other building". Basically, any structure that has a roof supported by four walls, whether or not it is securely enclosed applies.

All the Northern CA hospitals (Sutter) are going on strike. Not just Santa Rosa, Alta Bates blaa blaa blaa ALL except Sac for some reason they are not. It's going to be interesting more on Thursday when the one day Strike turns into 5 days, All the hospitals are saying they are highering Temp workers and the Contracts require 5 days of work. So the regulars that choose to strike will be locked out till monday the weekend is counted as days.

My Wife works at the Santa Rosa Sutter, but I'll leave politics out of this and just say it will be interesting around the hospitals for scanning.

the one digital I will miss a bit is S.Clara S/O 2 (for Cupertino) If I go up to the Marin area , I will simply bring my 296 with me. But the small size is sweet , other than the little antenna sticking out of my shirt pocket, you don't know I have a scanner. Just loaded the balance of the OPD TGs in it (30 total) I picks them up from my front window as does my 296. although , once again , they suggest leaving LCN 5 blank and I ignore them and it works for me :-) Nice scanner , lots of options for the way you set up systems/groups ((formally known as banks/ID lists LOL)

The idea you can set up conventional channels in the same way you do trunked stuff is nice.....i.e.

my system 7 I label NORTH BAY my groups are labeled Napa County.....Solano County.....Sonoma County.....Marin County(conventional stuff obviously) and you can go from there

Are you using software or programming by hand?

How is the CloseCall working out for you? Good data, or lots of pager hits and intermod?

My other concern is lack of 'WinXX' software. Don's done a great job, and I'll miss his interface (and my loads of frequencies) if I make the jump.

I remember my BC-245 remained fairly 'static' due to lack of good software. The Win96 and V-scanners means my Pro-96 is pretty flexible and 'prepared' for where I go in the Bay area.

Yea I'd like to know too! I live about 50 miles from the nearest Rat Shack, so I subscribed to their email notification thingy (for lack of a better word) to supposedly be notified me of any sales! Well, a couple of days before the "day after thanksgiving sale", I received such notice in my email, with no mention of the PRO-83 being on sale. There was another scanner for around $149.00, but no mention of the '83...So whats a person to do?

Go to the nearest shack on a regular basis? Anyone?

Later,

Todd...

Its that time again,Happy Holidays. Many agencies around the bay area step up patrols in and around shopping centers and malls. I know over in Dublin they have several "I"-units which are undercover plain clothes/car in and around all the major shopping centers. Also They have in years past had officers on bike patrols. I know also at stoneridge mall they have extra patrols in and thruout the mall area.I have heard the increase in radio traffic in Dublin on The Alco system, Dublin area Tg is 16048 and also heavy talk-around chatter on TG 16176 whic is Tac 8. Happy Holidays and be safe out there.

trunking scanner enables you to listen to trunked systems which include
in the bay area

Alco
Marin
San Mateo
Livermore lab
Livermore/pleasanton
richmond
oakland

$200 without digital would be a bc245 for a handheld or bc 780 for
mobile base

Depending on where you live, you'll need a trunked scanner if your police / fire is trunked.

The pro-94 scanner is $149 at radio shack, and is a very good scanner for the money.

For those of you that happen to hit (not literally) Valley Fair on the weekends - SJPD pay jobbers can be heard simplex on 460.175

Not the most exciting stuff - mostly traffic related, but we did have a female last weekend that was driving around the mall in an SUV randomly telling shoppers in the parking lot that she was going to blow up the mall - happy holidays!

Hey Ben - heard the same conversation and Calstar 2 didn't sound real amused with the folks at Stanford. They were talking about MED 92 857.4375 (Hospital Contact) which is the very frequency that they take their ringdowns on! Geez...not to rant, but I was driving back from an appointment, and I could swear that the population, as a whole, has lost several IQ points over the past few days. Must be the holidays ;^)

Kyle, how " experianced" are you in dealing with scanners. Keep in mind this one does NOT have digital if you need it. If your real good at computers , I would say go for it. a few of us on this list have this scanner and its real nice. A bit complicated at first , but lots of nice features. It is the most " menu-driven" scanner I have ever seen. Again , where do you live , that would tell us what systems are near you in relation to digital , trunking, encryption etc.

I personally think he threw the game. He wasn't in his 'mode'. The two
daily doubles he won it looked obvious like he knew but was holding back.
And at the end as soon as Ken Jennings answer displayed, they showed the
girl, and the look on her face was "Wait.. he answered wrong... I WON?????"

I'd like to see it again, I'm sure it will make its way on the net.

Another good example of current interoperability going down the tubes with no replacement. UCB simulcasts Berkeley PD Ch 1 so the UCB officers know right away if there is an incident or call near the campus. Go to not only digital but encrypted and UCB will have to wait for a City dispatcher to call the UCB dispatcher for assistance when a UCB officer could be two blocks away now and arrive in minutes. None of this is a good trend except for a few radio companies who are making tons of money selling incompatible systems to cities with way too much "homeland defense" money than they know what to do with.

Unfortunately, you're not going to be listen to Marin without a $400 digital scanner. All the others would work fine with a Pro-95, including San Francisco, BART, UCB, CALTRANS. Vacaville, and the US Park Police. So far, Marin is the only digital system.

34266. What's going on with 85 and 280?

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-12-01 16:52:03 UTC
From: Evan
Topic: 34266 Message: 34266

I took 85 south from El Camino in Sunnyvale (Well, almost at Grant). My entire trip into San Jose / Campbell border, 85 & 280 South were basically a parking lot.

Didn't catch anything on CHP extenders..

On a similiar note...

I don't have a scanner per se in my car but a mobile dual band, so the only CHP listening I can do is via 154.905. I finally figured out the 'beep' I hear every once in a while when I saw a chp officer at a mall - when they unkey, their radio beeps almost like a repeater tail - I'm assuming the extender confirming their transmission. I'm kind of assuming this beep doesn't get transmitted back to dispatch (i.e. they don't constantly hear it?) This would be a good way to find out if the transmission you're hearing on 154.905 is the officer who's nearby.

Might be time to mount a scanner in the car....

Evan

No. I don't know what that smell is.. That is bad too. But BFI @ San Carlos is WAY north. 20 minutes or so.

Evan,

No, you had the link right in that it pointed to the Pro-94. The 94 and 95 are the same cost right now but I'm sure you meant the 95, which I think anyone would agree is a better deal than a 94 at the same price.

Your point about tiny url is well taken though, especially for Radio Shack, which seems to have world's longest URL's. <g>

Subject: [bayscan] Unidne 296D Question <TG's>

Hi all,

I can't figure out how to toggle TG banks on and off while in scan mode. I have 3 TG's (1-1 thru 1-8) and (2-1 thru 2-6) and (3-1 thru 3-8) programmed into Bank 10 of the scanner.

Now, how do I easily toggle on and off group 1, 2 and 3?

Thanks,
Brian in Campbell

What I do with Radio Shack's web site, if I want to send a product to someone, is click on the "Email this page to a friend!" link; on the page it gives you to type in who to send it to (no thanks!), there's a bit that says: "You're sending your friend the following link: http://www.radioshack.com/searchsku.asp?find=20-525

And that's a short-enough URL.

I think a lot of the Eichler and Eichler-clone homes have water heaters in
an internal closet; my last place in Santa Clara did, right next to the furnace.

Thanks, guys. Those are both good tips. Ed, I used to use the "<"
character for enclosing URLS in the old days but most e-mail programs
and forums handle the longer URL's just fine. Yahoo groups seems
particularly bad about handling long URL's so I'll remember about
using the arrow characters next time.

Many of the ATC UHF pairs are on-demand: they don't simulcast
until/unless there's a military aircraft in range that might use them.
That being said, try these:

120.0/323.2
135.1/307.2
127.0/298.95
135.4/354.1

You might also park on Travis' Command Post: 349.4 ...

Let us know what you hear!

My fave is NORAD on 271.0. You will hear the fighters flying over the Bay Area when they are doing their Combat Air Patrol. Flights are random, so you may not hear any radio traffic for long periods of time.

How do you know it isn't just patched in?

34295. 187 in pittsburg

Topic: 34295 Message: 34295

Hello all

I just turned on the scanner and believe there is a 187 just occurred in Pittsburgh at Yosemite and harbor. Star one is overhead. They are looking for two or three African American male juveniles, last seen running from the scene. They are searching in a park near this location for the two or three suspects. It sounds like it started out as an 11-82. Pitt police are now requesting barricades to block off the street. Furthermore, the officers are saying that there is a blood trail, and are trying to follow it. Just getting word that they have found a subject believed to be an occupant of the victim's vehicle.

Don Starr had a Pro-96 tested in the mil air band. I seem to have misplaced the results, but maybe someone else has the test data.

I recall it was OK, but it had a deaf spot going over a microvolt. I've used the scanner in the field doing mil air and it seems to work, though clearly the MVT7100 band scanning at the same time could pick up signals that the Pro-96 missed.

It's no secret that the stock antenna with the pro-96 is pretty bad. I use Diamond RH77xA type antennas. The current rev is C.
http://www.universal-radio.com/catalog/scanants/2368.html
The SMA version works great on ham radios and is well built.

Stumbled across a developing situation on ALCO/43440 (Alameda City PD, tactical, unnumbered?): at the golf course, some bad guys holed up in the pro shop. Snipers in position, lots of logistical stuff going on, talk of rescuing an officer (and maybe shot?): his AR-15 was taken by the bad guys, he was the first on-scene. Sounded pretty bad.

But then word went out from someone to "tell the guys in the pro shop to stop playing with their flashlights, they are giving their position away" ... light discipline! :-)

It's still going on, decent listening.

There was some sort of issue years ago about UPS needing a chunk of bandwidth in the 200Mhz range or the country would go to hell. I never did 220, but didn't UPS get a piece of that ham band but never end up using it?

I know UPS security uses Nextel.

34300. Newbie Fire Dept Question (Marin Co.)

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-12-02 04:56:21 UTC
From: inigo4688
Topic: 34300 Message: 34300

Hey guys,

I've been curious for a while how you know what station number a fire station is, but reading in the Hayward Fire thread it sounds like the staion number corresponds to whatever vehicles are based there. Is this true for all fire stations? For instance, would my local Engine 21 be quartered at station # 21?

The reason I ask is that I'd be interested in databasing a lot of the Central Marin fire units for various districts (mine is Ross Valley) just to get a better idea of where they're going when I don't know the street names. Marin's District Fire Control 6 (42.50) covers a lot of area, and several fire departments from what I can tell, so I'd be interested in trying to sort them out. Does anyone have the info on units south of the Kentfield/Ross area? Because if so, I could try and organize everything north of that (Fairfax/Sleepy Hollow/San Anselmo/Ross/San Rafael (Maybe)), and we could combine them for a pretty well rounded apparatus list for the county (excluding Novato). I made an excel list of the County Fire units from Woodacre (which was freely available online), and put it in the files section, but this one would require a bit more effort.

If anyone else is interested or could help me out, drop me an email.

Thanks,
-Inigo

most of the time yes. the # of the piece of equipment would correspond
with the station #. Others like Alco who use a universal identifier
would be a little different. S.F.'s truck companies i believe differ
from the station also.

Hi Jim, this is a bit more up my alley.

Northern California Terminal Radar Approach Control (NCT TRACON
or "Norcal Approach/Departure" on the radio) is the terminal area
airspace for arriving and departing aircraft around the Bay Area at
and below 15000 ft. Here are their VHF/UHF pairs:

Sector: Area: Freqs:
Hooks - Moffet Approaches - 135.2 / 379.1
Woodside - SFO Approach Final - 135.65 / 310.8
Grove - Oakland Approach Final - 135.4 / 354.1
Licke - San Jose Approach Final - 120.1 / 290.25
Boulder - SFO Initial App (West) - 133.95 / 317.6
Niles - SFO Initial App (East) - 134.5 / 338.2
Toga - San Jose Initial Apprch - 121.3 / 275.35
Tracy - Oakland Initial Apprch - 123.85 / 278.3
Sutro - SFO/OAK Departures West - 135.1 / 307.2
Richmond - SFO/OAK Departures East - 120.9 / 323.2

Woodside covers Moffet departures since they climb into airspace used
by airliners arriving on parallel visual approaches to rwy 28L and
28R at SFO, requiring Moffet tower to coordinate a release with that
sector on landline.

Travis Radar Approach Control:

North ☐ 126.60 / 291.00
South ☐ 119.90 / 322.32

There's a third sector sometimes for the alert area but usually it's
combined with one of those sectors (simulcast).

Oakland Air Route Traffic Control Center: Enroute, climbing
descending aircraft.
Here are some around the bay:

Sct 12 - 125.45 / 307.3
Sct 41 - 125.85 / 323.0

Sct 40 - 127.8 / 353.5
Sct 24 - 119.475 / 380.3
Sct 35 - 134.15 / 387.1
Sct 11 - 127.45 / 357.6

251.70 Moffett Command Post
349.40 Travis Command Post

Offshore Warning areas are Beaver Control, they'll do live fire excersizes and all kinds of crazy stuff out there, but I'm in a valley so I haven't heard anything yet.

120.825 BEAVER CONTROL
124.125 BEAVER CONTROL
125.825 BEAVER CONTROL
290.15 BEAVER CONTROL
328.45 BEAVER CONTROL

And finally Norad will also use WADS Blue-7 on 364.2 for CAP Flights. Callsign BIGFOOT. Check out the BayMilCom group and www.airnav.com for more info, or email me.

Happy Listening!

Ben is right ....and wrong. (sorry Ben) Depends on the Fire Dept. SFFD truck companies DO have the same number as their stations. In fact the Engine company numbers were adjusted to fit that profile

i.e. What is now Station 14 has Engine 14 and Truck 14 , used to be Engine 36 and Truck 14. ONLY Engines and Trucks in SF match the Station numbers , Chiefs and most other apparatus do not. They changed the Engines numbers when they went to the present CAD system.

But this really depends . Novato Fire have 61xx units , not sure if they are station 1 for Engine 6161 and 4 for Engine 6164 or not, but that would be my guess.

Oaklands' Trucks do NOT match. San Joses' DO match

As Ben pointed out , the first 2 numbers in Alameda indicate the dept i.e. 34xx are county , 22xx are Berkeley .

To be perfectly honest , the best way to find out is to talk to your local Fire station and simply ask, you would be surprized how many will give you that information (although not all) try it.

I think Oakland is like that, too.

Here in Berkeley, they are all 22XY where X is the aparatus type (4=Truck, 7=Ladder, 9=Medical) and Y is the station (1, 2, 3, 4, 5, 6, 7). There are a few numbers that don't quite line up: 2204 is an Assistant Chief; 2255 is an older-looking (wildland?) rig that I hear now and again; 2288 is a beatup old (red!) Ford F350 that I've seen around a few times (but never on the radio).

well.....Engines DO have a couple ladders on them LOL

for newbies , fairly true ......west coast use " Truck Companies"
while east coast uses " Ladders" NOT etched in granite , but fairly consistant.
Try Keltys' books for listings also ......Scanners Unlimited has them.

4 means engines on all the universal designators.
0-39 chiefs
40-49 engines
50-59 reserve engines or depts with more than 10 stations
60-69 reserve trucks
70-79 trucks
80-89 brush
90-99 specialty rigs

Kyle,

Good choice and, on top of it, the Pro-95 is a trunking scanner. It just won't do digital trunking, and the only digital system you have close to you is Sacramento County. Consider getting the cable and the free Win95 software though. Even if you're not good with computers, Win95 is easy to use and a heck of a lot easier than entering 1000 frequencies and alpha tags on the scanner keyboard. <g>

Thanks, Dave. I did already have NORAD in there since it sounded pretty exciting but, as you say, there hasn't been much to hear. I've only hear one exchange in the past month. I get the feeling we don't get much in the way of CAP's compared to some other cities.

I suspect it's a patch also. We were notified Monday that Marin had set up a patch for Henry-One up here in Sonoma although we couldn't get it to work. We couldn't figure out if it's patched off our channel 1 and either could Marin.

Had a 95, returned it. Thing I didn't like is you couldn't manually go to a trunked ID, i.e. let's say in bank 1, I have Fire and police for city a, b, c and d. I can't 'go' to City D Fire. I have to scan and wait until that channel becomes active, then I can 'hold' on that talkgroup.

Unless that's not an issue for you... :)

Don's test results are at
http://www.starrsoft.com/software/Win96/FreqTest.asp . Between 275
and 375, it's a little over or under a microvolt, which isn't great
but not bad for what's supposedly out of range, especially if you
compare it the Pro-93 in the same table. What I'm really suprised at
is the 17 to 25 mHz reception. I can regularly pick up foreign
broadcast stations and WWV in that range. I'm using a discone on 30
foot mast so I'm sure that makes a big difference compared to any
rubber duck.

The standard rubber duck I use is one I bought about 20 years ago at
Scanners Unlimited when it was still in that little store. I have no
idea who made it but it's about 8 inches long and fairly prominent
coil structure about 2/3's of the way up where it tapers to smooth
rubber and a black cap with a little point on the top. It is a BNC
mount and I bought it when scanners were just starting to use BNC's
instead of the screw in mounts. It was sold as a low/high band
combination antenna and I got it becuase our S.O. was still on low
band at the time. It has the best reception of any portable antenna
I've ever used, including telescoping whips. I'd love to buy a
handful of them today if they are still in production and I could
figure out who made it.

Regards, Jim

Thanks, Inigo. I have most of the VHF freqencies programmed in
already but I never realized these were paired with a UHF frequency.
Under what conditions would they use the UHF frequency? Would it be
for military aircraft or do civilian aircaraft also use the UHF
frequencies?

I'll enter that BEAVER CONTROL frequency set and see what I come up
with. I wonder who decided on that frequency tag? <g>

where did you get that list Ben ? for the most part is about right , but Chiefs don't go all the way to 39. more like 19 Prevention and inspectors fall in the 20-39 gap. Large depts use 60 series for Engines as well , like Oakland.

> Under what conditions would they use the UHF frequency?

Some military aircraft (notably F-15s) don't have VHF radios (don't ask me how it happened; they are trying to retrofit them). Some pilots like to use UHF because it's quieter. Some just like it because it makes them cool.

> Would it be for military aircraft or do civilian aircaraft
> also use the UHF frequencies?

Military-only.

It's curious. I'd like to find the origin. BTW, BEAVER is the callsign for the FACSFAC/San Diego, you can read about it here:

http://www.facsfacsd.navy.mil/

Oops! Brain fog on that one. You're right, of course, Sac County and City are conventional trunking, not digital. All the more reason a Pro-95 is a good deal if you live in Antioch.

Evan,

There is a way to do this. I don't have a 95 but a person over ar
RadioReference had the instructions and it's apparently in the
manual. IIRC, you bring up the TG list and then scroll though it to
get the TG you want to listen to immediately.

actuallly they do. *technically* chiefs are 0-10 standard, but
depending on the department, you could ems, prevention and training
chiefs be in the 20 or 30's. for example with alco. And yes large
departments over 20 stations would also use 60 series.. and the list was
from memory (smile)

Comcast ha done a switcharoo. They now have 3 plans. They've downgraded their standard plan from 256 upload to 128 and now charges $69 for 4000 down and 256 upload.. I saw a degrade in my speed and called them up and found out my upload and been decreased and not told about...

59.99 3down 128 upload
69.99 4 down 256 upload
99.99 5 down 384 upload

Ben

Thats kinda odd since DSL speeds seemed to be on the rise, Comcast is
strictly broad band (cable) right?.

Might be time for you to look at alternatives. I just switched to DSL
Extreme - www.dslextreme.net

Enter your phone number for a list of prices. I just purchased the 3.0 meg
/ 416k upload ffor $36.95 a month.

Evan

yeah they used to have a standard and a pro package which was 3k down
256 up... now standard is 3k down 128 up and tier 2 plan is 4k 256.
the pro is 4k, 384 up and 5 static ip's for 99 bucks

Topic: 34300 Message: 34331

One other thing I was wondering, since Marin Co FD is contract with CDF wouldn't they have similar numbering to those of other CDF Units with no respect to station location?

Correct me if i'm wrong

00-20 Overhead

21-29 - Prevention Staff

30-40 Utility Veh's

That's what I was on. I'll be on dslextreme next week. Twice as fast up and down for $10 more a month? No brainer.

Like Jordan said it's military only, with marginal exceptions (like NASA at Moffet). But on the other hand just because UHF is only military doesn't in any way mean that the military doesn't use VHF. I hear C-5s and C-141s and KC-10s from Travis AFB on VHF talking to oakland center fairly frequently. One benefit is that they can hear other traffic talking to ATC, since VHF air traffic is never repeated on UHF.

Almost every ATC frequency on VHF has a corresponding UHF frequency to go with it. Every sector of ARTCCs and TRACONs have them, and every airport with a control tower will have at least one UHF frequency they can use, usually a mirror of the Tower frequency (Local Controller).

Air traffic controllers use a communications system that combines whatever radio frequencies are allocated to their sector or position with landline "Override" and intercom functions to coordinate flights with controllers sitting across the room or on the other side of the country, and everywhere in between. Older places use ICSS units that have a phone keypad and a big row of speed-dial-like buttons that manage both the active radio frequencies and the landlines, while newer places handle it all on an LCD touchscreen system called VSCS.

I brought that all up because their communications system is so integrated, different controllers may have a different preference with using UHF. They're required to always recieve both VHF and UHF, but the controller has the option of either discreetly transmitting on UHF but not VHF, or simulcasting transmissions on both frequencies. If ATC is simulcasting (my ZOA sectors 40 & 41 almost always do) then you won't always hear a reply because they could be on either frequency, and on the other hand if ATC is selectively transmitting you might hear nothing for extended periods on UHF -OR- be none the wiser when ATC talks to military aircraft if you're listening to VHF. Simulcasting is pretty common because of their workload though; keeping airplanes from hitting each other takes priority from being fancy with their radios.

Let me know if you have any more questions, and if your looking for more UHF pairs, you can find them at www.airnav.com (try the advanced search under airports) or if you have a sectional aeronautical chart they're listed on the opposite page of one of the chart legends.

Not bad. That's what I now pay for SBC/Yahoo 1500-3000/384. I dumped Comcast. They pissed me off one too many times.

Now I notice very little latency. Everything seems to download faster, even though the "1.5" is actually slower that Comcast's 3000 (What they used to be.) I suppose it has something to do with DSL technology, but I have no idea.

Latency can make speeds seem faster. And comcast's 3.0 MBPS is a shared
line - meaning you share that connection with other people in your
neighborhood. With DSL that speed is all yours.

Sorry to beat an OT thread with a stick, but... Who do they think they're kidding with those prices...?

Not to mention that they forbid you to have any kind of "server" whatsoever. Ben, how do you get around that with your streams? I know a guy who was streaming, as you are. He received a rude "Cease and desist or else" letter. Obviously, he chose "or else". ;-)

They don't like high bandwidth usage because of the way cable internet works. I don't understand it, but it has something to do with your local network or something--there is only so much bandwidth available to everyone in your area. So when you use "more than your fair share", everyone else looses out.

Yet, that problem doesn't happen with DSL. SBC (for example) couldn't care less if you host a server or network with routers.

That's exactly how cable works. Think of it as a freeway with 5 cars on it, and the top speed of all 5 cars being 200 miles per hour. So all 5 car's can't go 60 - that would be more than 200. BUT, if you were the only car out there, you could go 200.

Or a better analogy - a freeway with no CHP. 3 AM in the morning, you could go 100 miles per hour. But at rush hour, you're lucky to go 40 miles per hour. :)

>Yet, that problem doesn't happen with DSL. SBC (for example) couldn't care
>less if you host a server or network with routers.

Well, the problem doesn't happen with DSL because DSL is your line, no one elses. And I believe SBC does have a clause that prohibits servers, but they don't really enforce it.

Many DSL providers do port blocking to prevent streaming or setting up email/web servers. Speakeasy.net does no blocking, but their rates are not competitive with dslextreme. [Of course, I did send them the dslextreme prices and my contract is up in January....]

Personally, I don't find many websites that can feed me at 1.5mbps. Just check your download times on a large file or run inetbench http://www.thirdring.net/inetbench/

Having a fast upload seems more valuable to me if you have a website, do peer to peer networking, or stream.

Hey Chris... Just figured I'd ask for your permission first, but I'm guessing since they're on WebShots, they're fair play...

A newsgroup centered on Canada has a photography group where people post pictures they took.. One person snapped a picture of Bush's motorcade in Canada (I archved the one worthwhile picture - http://www.espphotography.com/preslimo.jpg - and I was wondering if you'd mind me sharing your link there (giving credit where credit is due obviously)?

I didn't see all those antennas on the back in your photos- your shots weren't from the rear.

BTW: Why does the President's limo have standard plates (DC Plate 800 002 - unless that's not 'standard'), why they have the car registered? I mean it's not like that car would get pulled over. <grin>

And did you see any comm equipment in there?

Take care and stay safe....

34363. PG&E Marin Freqs?

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-12-03 05:35:20 UTC
From: Roger Strohmeyer
Topic: 34363 Message: 34363

Can anybody verify what frequency or frequencies PG&E here in Marin is using these days? 158.265 is\was the main frequency I believe but I'm not hearing anything. Also, has anyone heard of a contract company that works for PG&E called ILB or International Line Builders and happen to know what frequencies they run on?

It really comes in handy to be able to monitor PG&E during the winter storm power outages.

Thanks,

-Roger

According to Bay City News, CHP is on the scene of an accident
on U.S. Highway 101 in the Soledad area that has caused two deaths and
several injuries. A CHP dispatcher said CHP is investigating whether
drunken or drugged driving was a
factor in the accident.

The accident occurred just north of Camphora Gloria Road,
and was reported around 8:20 p.m.

Hi Roger, I've heard activity on 158.265 fairly recently. That frequency is licensed to antennas at a number of their facilities around Marin (I think I've been recieving their dispatcher in San Rafael here in Fairfax). I checked the FCC ULS database a while back and found a whole bunch of frequencies in the 400 MHZ range and more in the 800 MHZ range (with transmitters mostly on middle peak of Mt Tam from what I can remember), but I haven't heard a peep on any of them, and they don't show up on the list of PG&E freqs in the files section here, so I really have no idea what they are.

I got to ULS thru radioreference.com . Good luck, I'm sure someone else here can give you more difinitive information.

I am running SBC DSL Pro and I an on the ragged edge of being able to
get DSL due to distance. I just checked my speed and with 2 feeds still
running my speed was 1353 down and 290 up for 34.00 a month. I just saw
a commercial on TV for SBC DSL standard for 19.95 a month for the first
year. Speeds are much slower on upload (I think about 128) but about the
same as I am running for download.

Getting cheaper all the time. ;-)

Something to keep in mind about DSL is that there is a length issue as in how far you are from the "main" phone building will determine your speeds. Someone please correct me if I'm wrong, but I believe it's a loss issue as in the further away from the "main" phone building, the more line loss there is.

Roger,
You are correct.
here are some "general " numbers BUT length DEPENDS on line quality as well as length of loop.
Basic
Speed: Up to 384 kbps/128* kbps * CO based gets 128-256 kbps upstream

Loop Length: CO - Up to 16,000 feet loop length, RT ? up to 21,000 ft

Standard
Speed: 384 kbps to 1.5 Mbps/128* kbps * CO based gets 128-256 kbps upstream

Loop Length: CO - Up to 12,000 feet loop length, RT ? up to 16,000 ft

Premium
Speed: 1.5 Mbps to 3.0 Mbps /256* kbps * CO based gets 256-384 kbps upstream

Loop Length: CO - Up to 9,500 feet loop length, RT ? up to 12,500 ft

Speed: 1.5 Mbps to 6.0 Mbps/384* kbps * CO based gets 384-608 kbps upstream

Loop Length: CO - Up to 7,500 feet loop length, RT ? up to 12,500 ft

Symmetric 384
Speed: 384 kbps / 384 kbps

Loop Length: CO - Up to 12,500 feet loop length, RT ? up to 16,500 ft

Hello all

I just turned on the scanner and believe there is a 187 just occurred in Pittsburgh at Yosemite and harbor. Star one is overhead. They are looking for two or three African American male juveniles, last seen running from the scene. They are searching in a park near this location for the two or three suspects. It sounds like it started out as an 11-82. Pitt police are now requesting barricades to block off the street. Furthermore, the officers are saying that there is a blood trail, and are trying to follow it. Just getting word that they have found a subject believed to be an occupant of the victim's vehicle.

Correct. Your distance from the CO (Central Office) makes all the
difference. I can open my door and throw a rock at the CO (well, not REALLY
but I'm about 2 blocks). Even then, my distance was a lot further than I
would have guessed because it's the distance the phone copper travels - and
apparently it zig-zags from house to house across streets, etc. But I'm
still darn close. :)

And then there is the case where you are at the very edge already, a new apartment complex gets built up the street, and they decide to reroute a few hundred local loops. Oh, and it adds 600 feet, making your already marginal DSL completely fail. Ooops!

This was a time ('98) when the local loop was one company (PacBell), the DSLAM and backhaul were another company (Covad), and the ISP was yet a third (Concentric). Between the finger pointing, the "we're-not-allowed-to-touch-that" excuses, and the predictable ensuing fiasco, it took a *month* of service outage to say, "gee, guess there's nothing we can do."

I expect it's gotten better these days (or has it?), but I've since gotten a new home and Sprint's fixed-wireless broadband.

The 12' mast that Sprint installed for the wireless antenna has the best real estate on my roof and was expertly installed. I'm very tempted to switch back to DSL just so I can use the mast for additional ham and scanner antennas :-)

Hey Evan,

I was acctually there with Chris and the MV Swat team (and took a few of the group shots on his site). We got to see all of the limos and the motorcade. Weren't allowed inside, but the doors were open and we got to peak in them. All the vehicles have comm equipment and one of them is heavily modified with comm gear. Yes, the doors of the limo are very, very heavy and thick. As the driver (he was giving us a tour) said, you don't want to get your fingers stuck in them. The navigation and displays are modified as well. :)

Hi

Sorry if this is old ground, but I was looking on eBay for a new scanner and noticed the BCT8 which looks good. I need only to be able to scan the San Mateo County Sheriff's freq 488.9875 and I think its digital, but Im not sure.

Please would someone familiar with this let me know if this scanner will work with San Mateo county, or if not, which is the most affordable reccomended scanner...

hafman@...

Thanks
Daren

NO, San Mateo County Sheriffs are on a digital trunked system. check out www.radioreference.com for a list of frequencies and talkgroups. The scanners that can get SMSO are Unidens BC785D or BC250D AND the Digital card for it OR the BC796D or BC296 which come with the digital cards. Radio Shacks Pro 96 also will work.

I prefer Unidens BC796D or BC296D .

Thanks Jim. I'm in the same boat for sure. Except I have to recover first from the price of the 796D :-). Perhaps I'll have to wait 6 or more months until Radio Shack puts the 2096 on sale. My major dissappointment with the 2096 is that it uses the same tiny display as the Pro-96. What a shame. I had the "mobile" version of the Pro-92 when it first came out and I returned it fairly quickly. Being in my forties, that tiny display just doesn't cut it :-(. Maybe the mobile version of the Pro-92 was a runaway success but I seem to recall a number of people complaining about the size of the display. Apparently not loudly enough for the GRE team to hear them.

I can only hope, in the interim, that the Uniden people are reading these various comments and are working on a fix. I would be happy if the radio just stayed quiet during the "buzz" time (i.e., I'm not asking that they necessarily speed up the decode time). It sounds like the Pro-96 starts playing audio a tad before it's really ready (hence the "Donald Duck" sound) but as you said and I agree, that's not nearly as annoying as the chainsaw buzzing sounds. All in all, very dissappointing for a $550 scanner.

Has anyone had any luck contacting technical support at Uniden regarding this? I guess I should at least see if there are any email addresses on the Uniden site to try. Does anyone know of a place to email technical people at Uniden?

Thanks,
Jeff

Thanks ED. Can you tell me, which zone(s) do you have programmed for San Mateo? Perhaps that's one of my problems. I live in the Mountain View area and have the South zone programmed. Perhaps a different zone would yield better results for me. I receive the South zone with at least 3 bars on the SS meter (for what that's worth).

Subject: [bayscan] police inpersonator in the state of mass

An inpersonator last night was charged with inpersonating a police
officer he went around telling people he was a police officer this
occured in the state of N andover mass it turns out this guy was once
an inmate he bought and x police car out fitted it with lights etc...
plus had a uniform this makes fellow officers as myself look bad, i
also got word he stole a plate from a police car so i like to see how
people feel about this thanks.

I agree that they belong in a padded room, but if you think that some nut job make you (and you fellow officers) look bad, then you need to get a big dose of reality. Most normal people have the common since to know that those sick-O's don't reflect what the hard working dedicated men and women of Law Enforcement are really about.

That comes for someone with more than 20 years serving and protecting.

Just because you think you are paranoid doesn't mean they aren't out to get you!

> of Law Enforcement are really about.

It doesn't make individual officers look bad. It makes the idea of their profession look bad. (If that makes sense.)

It has to do with trust. Here's an example:

I used to work for Caltrans maintenance. We were instructed time and again not to leave on our amber lights, or to leave lane closures up when they aren't necessary. Reason being, people will become numb to them. Think about it. If we constantly drove around with our amber lights on, when would you know if we're actually going to do something that involves caution on your part? Or, if we left a closure up but weren't using it, wouldn't that upset you; "Why should we keep out of that lane--they aren't using it?!?" So, we're instructed to use those things only when necessary. People would become numb. True, there are morons who are an exception to the rule.

So too it is with persons impersonating police. If you repeatedly see/hear about these morons impersonating police with lights and sirens--with uniforms--wouldn't you be a bit skeptical of ~anyone~ acting as a police officer? How would you know if the "officer" you saw is authentic or not? People would become "numb" to them also. So, people who impersonate are scarring the general public's opinion--they're leaving them with the possibility that "Hey, they may not be real, so why yield or why trust?" This is extreme, but it illustrates a point. And this affects you real officers because it makes your work much harder.

If you were in the middle of nowhere, and it was completely dark--you can't get a good look at the guy or his vehicle--yet you know an impersonator is running around nearby, would you automatically assume the "police man" was real? I wouldn't. I'm not saying that I would absolutely not trust the police. But it would make me skeptical.

So, yes, in a roundabout way, that makes the profession look bad.

- Brian

Not to be a stickler, but can we PLEASE correct this from "inpersonator" to impersonator? I have read through the thread, and being a teacher, this is simply killing me! Not that it's so horrible that we misspell a word now and again. Thanks for your understanding. ;^)

It has nothing to do with the Bay Area but I'll tell you what. From having lived back east in my youth, they have lot more problems with this type of thing because they routinely have unmarked units with just dash lights doing traffic enforcement stops. Helps the citation revenue but makes it real easy for an impersonator. At least the law in California speaks to not allowing unmarked units to routinely do traffic enforcement.

Regards, Jim

Drill started (again?)

Tac-4... 482.3375.

And Sunnyvale is down a med unit until about 12:00.

Fun for Med-7 today! :)

Looking in the archives (message 10261), I had these freqs confirmed
from Northstar in March, 2002:

153.230 - Ski Patrol/ Mountain Ops (best listening)
153.305 - Village/Parking, would also have some 153.230 traffic.
154.515 - Resort/Condo service
157.620 - Parking lot shuttles

Ski Area Output
Alpine Meadows 151.895 151.995 153.185 160.020
Auburn Ski Club Inc 151.925
Donner Ski Ranch 151.935 151.490 159.825
Heavenly 442.475 151.715 464.600 464.850 464.950
Soda Springs Unknown 151.835 152.000 461.3875 461.4125 466.3875
466.4125
Soda Springs Ski Patrol 155.160 155.220
Soda Springs Shuttle 154.540
Squaw Valley Unknown 463.500, 461.475, 461.675, 463.200, 463.325,
151.685 151.715 151.775 154.540 461.675 463.500
Sugar Bowl 154.570 154.600

Yeah that looks like my list from a few years back, I haven't been back to confirm and new ones since. The radio site for Northstar is on Mt. Pluto, which also has a ton of other radio facilities. A picture I took of the site is on the main page for SCANnorCAL. Because of the good location the Northstar repeater can be heard all over the north lake area.

If you find any new ones or confirm any of the questionable ones, please come back and post so we can keep an updated list.

Thanks
Nick

34428. Sonoma County SWAT using Calcord for drill

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-12-05 18:32:53 UTC
From: J Potts
Topic: 34428 Message: 34428

I find it interesting that the Sonoma county SWAT team is using Calcord (156.075) for the drill. I would assume they would use their actual freq for the drill. I am searching the 453 and 460 MHz range to see if they are patching over to calcord but can't find anything.

John

Are they working with anyone, or just using it solo?

>Been to a mall lately? <grin>

I got a off list e-mail (you know who you are - if you want to be known, reply here) otherwise I'll respect his privacy and not say who it is - not in a negative sense) however his point was Mall Security does it to have their presence 'known'. Well, it numbs us to those lights. The first time I saw it, I started to give them the right of way as I would a police car with their lights on. I then realized they simply drive around with lights flashing. Now I simply ignore them. Now there'll be a time when they need to get to a call quick and no one will care because they ALWAYS have those lights on. If security wants to make their presence known, walk around the mall. I remember once when I worked near a freeway entrance (you know there's a donut shop right there), I was on a break just sitting outside listening to my scanner. An ambulance was requested for a freeway call - I won't say what ambulance company it was - I don't think AMR, I think one that's no longer in existence. Anyway, they're going code 3 about a block away when they get cancelled. So what do they do? Shut off the lights and siren as they pull into the strip mall parking lot, get out, go in and get some coffee and donuts. Ok, _I_ knew what happened, but to anyone else watching, they just had a code 3 donut stop. I would hope anyone here (I know we have an number of LEO's and Medic's) would drive around a bit after shutting off the siren before going Code-7.

Back to 'making presence known' - I believe quite a few years back, a police agency put civilians in police cars to drive around - simply a crime deterrent. Figuring no one would rob a store if they saw a cop car every 5 minutes. Great idea until something actually happened, and one of these 'cops' was flagged down.

Ok, I have no source for the above (i.e. it could be urban legend) but it sounds like something that, 10 or more years ago might have been a "great idea let's do it" and then actually happen...

Update on the pursuit

They have the vehicle stopped in Richmond. Woman is 10-15. Unknown exactly where they are except west of 580.

On a side note, Millbrae was unable to get CHP to assist in the pursuit. Air 37 finally joined in at the end but no ground units were committed. Other agencies such as SF, Brisbane, San Bruno and Richmond had units respond. Dispatcher was stating that CHP would not join in because there was not enough info on the driver.

I have ALCO programmed like any other trunked system though I have it closed and listen to less than 10 talkgroups so I don't run into the WIDE/LOCAL reception problem. Here's their layout FWIW:

WIDE:
866.9375 (Fallback CC)
868.0875 (Normal CC)
868.7625 (Normal CC)
867.4000 (Fallback CC)
867.9250
866.8000
868.3625
867.1500
866.4250
868.7125
868.9250
868.0375

LOCAL:
867.2500
867.7750
867.6750
866.1500
868.2250
868.2000
868.4375
868.2750
868.6500

AFAIK LOCAL will still overflow into WIDE when all LOCAL freqs are in use. I haven't kept up on which WIDE freqs but it's not all of them. For programming the 96 just put in all four control channels and not worry about it. ALCO segregates talkgroups into User Groups; those User Groups are then assigned to specific blocks of frequencies. For example, Local is User Group A and WIDE is User Group B. I believe they have about five of them though one or two are for testing.

Here's an old post for reference:
http://groups.yahoo.com/group/bayscan/message/11189

If any more questions email me as I don't pay attention to Bayscan anymore.

Relax guys as this is pretty common. It saves admin updates to the licenses in the future so they can upgrade when they want to and not have to wait for the update to go through the FCC.

Most people aren't aware that they tell you 1.5Mb is the max but due to DSL technology overhead you'll only hit about 1.3Mb-ish.

There are also no distance restrictions with cable. DSL is beginning to become an outdated technology.

I've tried them both and Cable has proven itself to me.

No it's not. Your defense is outdated. DSL fanboys like to use the whole "you share your connection with the whole neighborhood" when the fact is today's Cable Companies are not overloading their nodes as how they used to 4 or 5 years ago. I DO get up to 3Mb down. This is anytime, night, day, evening. This is provided the source has the bandwidth available to send to me.

Also, once your copper hits the DSLAM you share your bandwidth with all the other DSL customers. So there's no difference. Neighborhood or CO, you all still share the pipe connecting you to the net.

In present day it's all up to your provider in how much bandwidth they have available on a pooled basis.

But you are *serving* a service to other people. Technically, each computer you have providing a stream is a server so you're running multiple servers.

Yes, they were working with several Sonoma County PD's, Marin, and Napa. They didn't want to tie up one of our regular UHF channels for the entire day and we barely have enough UHF portables for patrol let alone having enough to use UHF CLEMARS for a drill. Some of the local PD's have UHF portables but Marin has T Band and Napa has VHF. We have a SAR VHF radio cache with about 35 radios so that's why they ended up on CALCORD. They were also using our SAR tac channel on 155.295. You would have needed to be within a couple of miles to hear everything since it was all simplex.

Regards, Jim

> anything.

158.2650-100.0 is the freq for their troubleman. I hear them once and a while but each area seems different. In the Bay Area SF City seems to be the most chatty. PG&E has a mobile data system for retreiving tickets and all so they don't necessarily have to use the radio anymore.

Pole construction uses 153.5750 CSQ. You won't hear them much either unless they're car-to-car or needing on-site coordination (rare).

PG&E has a very disorganized radio system. Nothing is the same anywhere. Their radio programming is a joke too.

This is what I have in my 96 and has been verified against PG&E radios:
PG&E 153.48500 CT 103.5
PG&E Gilroy 153.54500 CSQ
PG&E Mateo 153.56000 CT 127.3
PG&E Const 153.57500 CSQ
PG&E Cuper 153.59000 CSQ
PG&E GolGate 153.65000 CT 127.3
PG&E Clara 158.19000 CT 127.3
PG&E Napa 158.20500 CT ?
PG&E NrthBay 158.26500 CT 100.0
PG&E 153.72500 CT 127.3

Above are the common PL tones they use. In the construction radios they're programmed for both CSQ and tone, sometimes for multiple tones.

Ok, if you say so.

How often do you hear of this type of impersonation happening? When there is a problem with impersonation, isn't the public notified by the news media of this possibility? I don't remember many occasions of this happening, except the red light slayings years ago.

Just because you think you are paranoid doesn't mean they aren't out to get you!

Note the added "OT" in the topic ...

> I agree that they belong in a padded room, but if you think
> that some nut job make you (and you fellow officers) look
> bad, then you need to get a big dose of reality. Most normal
> people have the common since to know that those sick-O's
> don't reflect what the hard working dedicated men and women
> of Law Enforcement are really about.

It doesn't make individual officers look bad. It makes the idea of their profession look bad. (If that makes sense.)

It has to do with trust. Here's an example:

I used to work for Caltrans maintenance. We were instructed time and again not to leave on our amber lights, or to leave lane closures up when they aren't necessary. Reason being, people will become numb to them. Think about it. If we constantly drove around with our amber lights on, when would you know if we're actually going to do something that involves caution on your part? Or, if we left a closure up but weren't using it, wouldn't that upset you; "Why should we keep out of that lane--they aren't using it?!?" So, we're instructed to use those things only when necessary. People would become numb. True, there are morons who are an exception to the rule.

So too it is with persons impersonating police. If you repeatedly see/hear about these morons impersonating police with lights and sirens--with uniforms--wouldn't you be a bit skeptical of ~anyone~ acting as a police officer? How would you know if the "officer" you saw is authentic or not? People would become "numb" to them also. So, people who impersonate are scarring the general public's opinion--they're leaving them with the possibility that "Hey, they may not be real, so why yield or why trust?" This is extreme, but it illustrates a point. And this affects you real officers because it makes your work much harder.

If you were in the middle of nowhere, and it was completely dark--you can't get a good look at the guy or his vehicle--yet you know an impersonator is running around nearby, would you automatically assume the "police man" was real? I wouldn't. I'm not saying that I would absolutely not trust the police. But it would make me skeptical.

So, yes, in a roundabout way, that makes the profession look bad.

Thanks Jim

They seemed to disappear from calcord at around 11am and I couldn't find them after that. The SAR frequency wasn't one of the ones I thought of programing into my radio. It was interesting listening while it lasted. I live less than a mile from the site were they were drilling.

Fairfield Fire responding and now on scene of some type of accident or incident with a train, possible someone(maybe a child) hit by a train. Fire asked dispatch to start helo. First PD unit on scene reporting person not breathing, no pulse. Taking place on 482.7875 PL 173.8. Fire asking that all trains in area be shut down. will update as soon as I hear more.

34449. Update: Incident in fairfiled 5:20PM

Perhaps my example of sharing the cable connection was a bad example. But I stand by my latency example. I had Sprint Broadband at one point. That thing could be almost 4 Megs at times - and other times I felt like I was on dial up. And latency? We're talking average 500 ms. Heck, I recall times when they were having problems of WAY OVER 7000 ms. I'd love to find the text files I saved of those....

I'm not so much a DSL Fanboy but anti-cable. Those b@5t@rds at Comcast are creating a landfill. I get one or two of their full color flyers every week. I'm sick of them.

Evan , I looked it up and I strongly doubt its apartments , lots of one story single family dwellings in that area. I would bet they have ONE fully involved threatening others. BUT , try 401 buena vista and see what you come up with , that should be the address in that area.

> anything.

158.2650-100.0 is the freq for their troubleman. I hear them once and a while but each area seems different. In the Bay Area SF City seems to be the most chatty. PG&E has a mobile data system for retreiving tickets and all so they don't necessarily have to use the radio anymore.

Pole construction uses 153.5750 CSQ. You won't hear them much either unless they're car-to-car or needing on-site coordination (rare).

PG&E has a very disorganized radio system. Nothing is the same anywhere. Their radio programming is a joke too.

This is what I have in my 96 and has been verified against PG&E radios:
PG&E 153.48500 CT 103.5
PG&E Gilroy 153.54500 CSQ
PG&E Mateo 153.56000 CT 127.3
PG&E Const 153.57500 CSQ
PG&E Cuper 153.59000 CSQ
PG&E GolGate 153.65000 CT 127.3
PG&E Clara 158.19000 CT 127.3
PG&E Napa 158.20500 CT ?
PG&E NrthBay 158.26500 CT 100.0
PG&E 153.72500 CT 127.3

Above are the common PL tones they use. In the construction radios they're programmed for both CSQ and tone, sometimes for multiple tones.

Emergency Medical Service Response Procedures

Pin-In Response = one engine, one truck, one battalion chief, one squad and one ambulance

EMS Plan I = 5 ambulances, one EMS Field Officer, one EMS Dpty. Asst. Paramedic, one engine, one truck, one battalion chief

EMS Plan II (additional response) = 5 ambulances, one EMS Field Officer, one EMS Triage van, one Deputy District Chief, one command van

EMS Plan III (additional response) = 5 ambulances, one District Chief, and the Deputy Fire Commissioner of EMS.

> this is near the Chicago "loop" about 7 blocks from Lake

WGN is certainly covering it , live coverage showed firefighters set up multi-versals on two rooftops across the street and knocked down some heavy fire. it showed fire covering at least 10 windows. street reporters were moved WAY back from fear of injuries of falling glass. WGNs coverage is continuing..... (1925 hours)

Watching WGN about an hour ago, the fire had significatly entered the 30th floor and you could see at least 8 or 9 windows with fire in them. two groups of fire fighters were using multi-versal streams from adjoining roofs. Update on injuries --- about 25 including about 12 fire fighters , many serious or critical. this will be my last update, check local or national news on the tube.

From: Nick in SLO
Topic: 34492 Message: 34492

Sonoma County SO is looking for a Carjacking suspect and vehicle, that just occured somewhere in South Sonoma County. They are also contacting CHP, Petaluma PD, Novato PD, San Rafael PD, and Marin SO to keep an eye out for the vehicle. CHP is advising that they towed the vehicle in question today because it was found abandoned in the center divied on Hwy 101. The tow company is advising that the vehicle should still be in the lot. The victim apparently has two broken thumbs for the incident.

34494. question on CHP air frequencies

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-12-07 06:21:42 UTC
From: Mike Wright
Topic: 34423 Message: 34494

I am wondering if any of you have heard air to ground traffic on the following frequencies? I have heard some on 42.34 Blue but what about,

45.02 - Ivory - Air to Ground Primary
45.86 - Air to Ground Secondary

I've scanned these a long time and heard nothing. Would 45.02 and 45.86 be used in central Calif? I had a scanner when I traveled through there a couple weeks ago but heard nothing.

Also I have heard nothing on these frequencies,

CHP Air to Ground 122.875
CHP Low Altitiude 122.750
CHP Company Net 122.850

Anyone with any comments? Thanks in advance, Mike

They use those freq. very infrequently, sometimes when they have a plan in the air doing traffic enforcement you will hear the air unit, and if your real close maybe the mobiles.

Just because you think you are paranoid doesn't mean they aren't out to get you!

in the past, 45.02 was used for airborne enforcement activities. In the last few years, the majority of that traffic has moved to the Blue (42.34).

> 45.86 - Air to Ground Secondary

45.86 is the mobile side of the lowband CLEMARS frequency pair (with 39.46). It is a FCC designated intersystem channel.

45.86 is used as a mobile channel in Fresno.

None of those would be used by ground-based units. Those frequencies are commonly used in major metropolitan areas (like L.A.).

Wow! The high wind recorded on my anemometer in Petaluma was 31 mph at 2246 and the wind dropped off rapidly after midnight. We only had .67 inches of rain total. A few trees down up here but nothing serious. It seems like there should have been some more significant wind damage down your way.

BTW, are we geeks, or what? <g>

34507. Antenna Comparison

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-12-07 18:09:16 UTC
From: Mike Wright
Topic: 34423 Message: 34507

Here's a url of antennna comparisons someone did for a variety of mobile antennas. He checked how well different types receive on all bands (i.e. checked how well a VHF antenna receives 800 MHz). I fully agree that glassmounts suck, and I find Larsens are great antennas (my low band larsen receives CHP very well).

http://www.northwestradio.com/interceptnw/antennas.htm

Some of the author's comments:
First, always use NMO mounts. They are THE standard and give you the most options for swapping antennas around on your car.

Larsen and Maxrad are the way to go. On some models you can save a few bucks and still retain quality with the Maxrad.

Don't use mag-mounts unless you really have to. I don't care what the manufacturer says, they will scratch your paint. Not to mention they don't ground as good as other mounting arrangements.

Drilling holes in your roof is the best way to go (performance-wise).

Glass mounts suck for a variety of reasons. Single-band receive on 800mhz is about the only worthwhile use for these terrible things.

Another great mount is the trunk-lip bracket. The Larsen ones are ugly and expensive. Get the Maxrad. These require no holes and work great. Sometimes you need to do minor antenna re-tuning on lower-frequency antennas since part of the radiated signal will bounce off the metal on the roof of the car. Again, not a perfect radiation pattern but certainly usable.

If you plan on receiving 800/900mhz using an NMO mount, check any cable that you got with your antenna or bracket and see if its standard RG-58. If so, chuck it and get an 800/900mhz NMO mounting kit that has RG-58 double-shield or better cable (Cushcraft Ultralink for example). Despite the loss-per-hundred-feet ratings on RG-58, you can suffer noticeable losses if you use it on short mobile cable runs.

PD On scene, Armored car stopped for a vehicle over the side of the road.
PD advises no one present in vehicle.

Code 22 (not yet lifted) on Palo Alto PD Main. No further updates unless
warranted.

Warranted, like finding out that the vehicle is reported 10851 (stolen) out
of San Carlos.

Vehicle has been there a while.

No further updates blah blah.

Just got off the phone SCC Comm. Apparently the suspect was a prisoner being transported to North County Courthouse for some hearing and got away from the transporting officer. The dispatcher stated that they have called off the search for the prisoner because they are unable to locate him.

Another fish got away...

34524. FW: [EDIS] FUNNEL CLOUD REPORTED NEAR SALINAS AIRPORT [News: San Francisco Bay]

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-12-07 23:29:03 UTC
From: Mike McRoberts
Topic: 34524 Message: 34524

I sure hope no one was trying fly around Salinas today....

NATIONAL WEATHER SERVICE SAN FRANCISCO CA
122 PM PST TUE DEC 7 2004

SALINAS VALLEY/INTERIOR MONTEREY COUNTY/SAN BENITO COUNTY-
122 PM PST TUE DEC 7 2004

...FUNNEL CLOUD REPORTED NEAR SALINAS AIRPORT...

AT 115 PM PST AIRPORT PERSONNEL AT THE SALINAS AIRPORT REPORTED SEEING A FUNNEL CLOUD LOCATED APPROXIMATELY 4 MILES NORTH OF THE CONTROL TOWER. THE FUNNEL WAS OBSERVED FOR ABOUT ONE MINUTE BEFORE DISSIPATING.

STUDIES OF COLD AIR FUNNELS SHOW THAT THEY SELDOM TOUCH THE GROUND AND RARELY DO ANY DAMAGE. THESE FUNNEL CLOUDS NORMALLY PROTRUDE A FEW HUNDRED FEET DOWNWARD FROM THE BASE OF THE PARENT CLOUD...ROTATE AND LAST A FEW MINUTES BEFORE DISSIPATING.

ED - I had a feeling I pressed "send" too quickly ;^)

A blaster is a term commonly used by SJPD to refer to someone suspected of being under the influence of Phencyclidine (aka Peace Pill, angel dust, crystal, hog, horse tranquilizer, flakes, embalming fluid, and rocket fuel).

MVA with multiple critical injuries. This is apparently multiple vehicles involved in a collision after racing.

Partial list of resources:

MED 30
BATTALION 13
TRUCK COMPANY 18
COUNTY ENGINE 12
AMR x 2

NB 101 just north of Cochrane

AMR on scene with six critical patients with request for air ambulance to go on standby.

More as it becomes available.

From: philosopher_dave
Topic: 34539 Message: 34539

I just tuned in and there is something going on "just north of Cockrane." Eleven patients, six criticals and four minors. (I know that doesn't quite add up.) One rescue in progress

I presume this is on Hwy 101.

They've got six ambulances, and a request for two helicopters.

I'm listening to AMR on freq. 857.43750
CHP is on seen also. I suppose 42.500, Ruby.

I know it's preliminary, but I figured it's best to get something posted.

Breaking News: Canadian Company Buying AMR
By Mannie Garza
Dec. 7, 2004

Laidlaw International announced Dec. 6 that it has agreed to sell American Medical Response, the largest ambulance company in the United States, to Onex Corp. Laidlaw and Onex predict the sale will close by the end of March 2005.

Toronto-based Onex is Canada?s largest leveraged buyout firm with global operations in service, manufacturing and technology. A New York-based subsidiary, Onex Partners, a private equity fund, will pay $820 million ($980 million Canadian) for AMR and EmCare, Laidlaw?s emergency-department staffing business.

?These businesses are excellent growth platforms in dynamic sectors of the health-care industry," says Robert Le Blanc, an Onex managing director. "We look forward to working with their strong management teams to achieve that growth."

Onex holdings include Magellan Health Services, the leading provider of managed behavioral healthcare and insurance services in the United States; Res-Care, a provider of residential, therapeutic, job training and educational support services; Celestica, one of the largest electronics manufacturing services providers in the world; Hidden Creek Industries, which produces automotive parts and services to the transportation industry; Radian Communications Services, a wireless communications infrastructure and network services company; Cineplex Galaxy, which operates hundreds of movie theaters in Canada; and Phoenix Pictures, which produces feature films.

Laidlaw says it should net $775 million from the sale and will use that money to pay off approximately $579 million in outstanding debts.

?These companies have been excellent performers for the past few years, and I am delighted that they are being acquired by a company that appreciates both their potential and the quality of their current management team,? Laidlaw CEO Kevin Benson stated in a press release on the sale.

AMR, with 4.400 vehicles and 18,200 employees, operates in more than 260 locations in 34 states.

LeBlanc told Canadian Press that Onex plans to grow AMR through new contracts and acquisitions. No one from Onex, Laidlaw or AMR had returned calls seeking comment when this went to press.

I was just driving home and saw a solo white pick up truck that had rolled over. novato fire was on scene.. appeared to be 1 pt. extrication was being preformed.Truck is in bad shape.

3 engines and BC were on scene.
Novato PD and Marin S.O. were also there.

Novato Police Department Primary Novato 13 39.9800

I did not see CHP. any one hear this? looked pretty bad.

Thanks much for the update. Are you sure you heard Novato PD (or any other PD for that fact) on 39.98?

Novato PD has completely switched to the MERA digital system as far as I know.

Oh, hey Bayard, my post was mostly out of curiosity that if you were indeed hearing traffic on 39.98 I wanted to know about it... I was not questioning your scanning abilities or frequency choices. :-)

Here's what I have so far on the MERA system so far for Novato PD TG's.
47248 Novato Police Dispatch 1

47280 Novato Police Dispatch 2

47312 Novato Police Tactical 1 (tac 2?)

47344 Novato Police Tactical 2 (tac 1?)

47376 Novato Police Tactical (This TG is sometimes encrypted...possibly detectives)

My 296 is still down at Uniden in Texas being repaired so I'm still stuck scanning conventional. :-(

-Roger

PS VERY stormy here tonight in Marin. Lot's of wind\rain.

Car vs. tree, El Camino and Grant. Jaws of life called in.
Lifeflight landed in the intersection. CALCORD 156.075 and the usual
Mountain View freqs. Sounds critical.

Just heard the call to Stanford. I take that back. Major trauma but still hanging on. Was going 50-60 MPH from 237 into the intersection, lost control, and his SUV hit a tree. All lanes shut down, Lifeflight heading back to Stanford.

Thanks, Ed.

Now there's another injury accident at eastbound 237 and 101. PD vehicle vs. another vehicle. Probably while the PD was racing to the scene. Sunnyvale taking this. Switching to "blue." Do you know what that is?

So do I. The traffic signs in that area kept getting hit time and time again. I do believe a 2-post sign is still down (and probably missing?) to this day -- in the median, EB 237 near Oak Ln. I'm trying to picture trees in the area; the ones that I'm thinking of are on the right shoulder.

But regardless, 50-60 mph?!? Sheesh!

Not sure what more I can add that wasn't given out here, but from the press release, it was a Chevy Suburban, single driver v.s. tree at the south east corner.
Driver was unconscious and trapped. AMR heard the crash.

I'll pick up a copy of the press release when I go by fire admin today.

Sometime and I say sometimes, drills do sound real and I think the goal
of the agencies coordinating the drill is to make seem them as real as
possible, even on the radio, so even to a trained ear it sounds real, we
sometimes get fooled and it works both ways, For instance I heard the
incident go down in Santa Monica a while back when that elderly guy hit
all those people at the farmers market, At first I though it was a drill
but, After hearing the emotion in the FF's voice you knew it was real,
Sounded like a terrorist struck-Very scary at the time.

good point. the units on this are quite calm. Now the MVA last night in Morgan Hill was a different story, quite excited. the common sense thing to do is to monitor any given situation for awhile and you can usually figure out if its a drill or real. Seems interesting SF ran the drill yesterday and now Santa Clara County is running one today. maybe its terrorist drill week ? I would bet todays in at one of the courthouses in San Jose ,but can't confirm. They mentioned Dept 57 and I have NO idea.....but they also mentioned Los Altos PD involved.....so it could be North County in Palo Alto.

I had one of those mistake drills one time and I was dispatching. San Mateo County had a drill one time at the Taco Bell at Serramonte Mall in Daly City. The scenario was that a roof had collapsed onto the store and onto people. There was a MCI set up and Fire Engines were rolling and setting up LZs in the parking lot for Helo's and setting up a triage area. I was listening to whole thing. I sent a couple of BLS units in the area to stage near the incident. Well, one got on scene (they were listening to the same traffic) and called back. They said nothing was going on all quite. We talked back and forth thinking we heard the wrong mall or the wrong area.

I called County Communications and asked What was up? They said oh, it's just a drill. I said kinda laughing...I would be nice if someone had said IT WAS A DRILL!!! I told them I had units in the area. They said oops! and hung up. Then after that about every other word was "This is a Drill" We all had egg on our face about that one. The thing was it was a table top exercise....No one was even there!!

Yeah, I have yet to here DRILL on this incident on BAYMACS ..... they have one guy with prior conviction of 187pc (DRILL) and his weapon of choice is an AR15 etc .....at times this sounds a little real , but with 2 deputys shot, things would be a lot more hectic.....

I can't speak as a dispatcher since I've never been one, but is it common
to just start sending units to a call like this (i.e. not your call, but
another agencies call?)? I mean worst case scenario, imagine someone dies
becuase the ambulance that should have been right next door to them was
being sent to a drill, and they were sent to a drill when they weren't
asked to be sent...

Not saying you did anything wrong, just playing devils advocate.

Well I should make it a little clearer

At the time (80/90's) When I was working for the predecessor to AMR. I was dispatching the EMT's (BLS) . At night when there was nothing going on we could move them around to what ever area we needed for coverage for. The EMT's were back-up to the Paramedics. There was never any danger of any lives being lost. We usually at night or evenings put the EMT's at three locations 92/ECR 380/ECR and Seton Hospital. It wasn't out of the ordinary for the units to meet up for coffee and such.There was usually not much going on in the evenings.

Besides I was putting units in the area so, if a call came to respond in we would be on top of it. At the time there were only 9 paramedic units stationed in the county. They were 911 dedicated units dispatch by the county.

Medic 11 - North County
Medic 12 - Pacifica / Coast side
Medic 13 - Airport

Medic 26 - Central
Medic 27 - San Mateo / South Central
Medic 28 - Half Moon Bay / Coast

Medic 31 - San Carlos/ Belmont
Medic 32 - Redwood City Area
Medic 33 - East Palo Alto

Then there were EMT's to back up the Medics

In the day there would be 6-8 units
at night 3 units. They would be doing routine calls but could be used to back-up the county if all the medic unit's were busy.

Other companies do the same thing but they call it "Shadowing the call" They aren't called in to respond but, they are in the area if needed.

Hope this helps.

5B are our TAC5 Repeater - 154.8 w/ PL173.8 - input to the repeater is
159.975 same PL.
5A is the sameand 5C is simplex use of 154.8 w/ the same PL.

You can also hear BAYMACS on 155.475 PL 156.7

Very interesting listening...especially when I recognize some of the voices.
This sounds like a joint training w/ Los Altos PD SWAT and SO SERT. I know
that SERT is there but unsure of LAPD's involvment.

One suspect surrendered - 10-15. Other suspect is 10-55 (DEAD)

Looks like they are all done. Heard one unit stating that they are
collecting their gear and will be debriefing in the jury room.

I wonder what's for lunch?

34588. Question about AMR in the north bay

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-12-08 20:47:11 UTC
From: inigo4688
Topic: 34588 Message: 34588

Hey guys, all this talk about AMR reminded me of a question I had. For the north bay in Marin Co., I have 155.10 as AMR's TAC (one website called it "Blue 17") and 155.16 as AMR Dispatch (unknown the callsign). I have heard traffic on them but I'm just wondering if these are accurate, where they cover regionally and most of all, whether these are just shadow frequencies of the EMS Talkgroups on MERA. I haven't heard much mobile traffic and I was curious if they were setup like the Sheriff is, with dispatch on conventional and mobiles on a MERA TG.

Thanks for any help you can give me,

-Inigo

A good sign of a drill is when every resource request from the IC gets filled as soon as requested. Never happens in real life.<g>

This was the second day in a row that I posted something that I was quickly embarrassed about.

There's a careful balance that I still don't have quite worked out. On the one hand, it's important to get the word out so everyone has the opportunity to hear it before it's over. On the other hand, there's the danger of getting information out that's incorrect.

I have a video tape of NBC's broadcast day start a little after 11:00 a.m. CST on Nov. 22, 1963. (That's when J.F.K. was assasinated.) The information that was broadcast right after the event was almost completely wrong. They knew something happened to the motorcade and they quickly figured out that they went to the hospital. But some of the other stuff was
amazingly wrong.

I appreciate all of your comments, as I work on my technique.

Dave Peterson

155.160 is the primary AMR dispatch channel from Solano County into the Sacramento Valley. It's one of the reasons that 155.160 is almost useless for SAR since their mountain top sites cover our traffic.

In Marin, it's still a combination of MERA and 155.100 that's used for ambulance dispatching. Cities like Novato and San Rafael, that have their own ambulances, do the dispatching on MERA. Other cities and the county still do most dispatching on 155.100. I believe it's called Control 17 in Marin. It's Blue One up here in Sonoma, where there is still some ambulance dispatching but the main frequency is Blue Two, 155.265. Napa County still uses 155.100 as their main ambulance dispatch freqency.

Regards, Jim

No big deal, Dave. The agencies running the drill should announce that it's a drill at least evey half-hour. That's SOP for us where we announce our call sign and that this is drill traffic every half-hour. It's easy for other agencies to get confused if they're not in the loop and it usually leads to a flood of calls to dispatch from other agencies and the media wanting to know what's happening.

Regards, Jim

Disagree with that Jim. San Mateo County' fire dispatch is head and tails above most. With CAD systems, most stuff is pretty automatic, although its not perfect.

You shouldn't be embarrassed David , I thought maybe you were simply getting yahoo messages later than the rest of us (it sure happens)

rule of thumb is simply .....wait ......give it a couple minutes for updated information AND go over you messages (for this ...bayscan) to see if someone has beat you to the punch. Sometimes thats hard to do with an exciting call , but there are plenty of others monitoring especially in the evening hours and its not uncommon for 3 or 4 or us to run to the PC to tell others.

the other thing is to make sure calls are CONFIRMED by bonafide officials. for Fires.....that means the Fire Dept NOT police, ems or others. I have heard police officers call in 3 story apt. bldgs FULLY INVOLVED and it turns out to be a mattress fire in ONE room. give it a few minutes , let the pros get there and do there size-up first. IMHO

Thanks for the promt reply Jim, I've barely heard any traffic on
Control 17 but it is there occasionally. 155.16 was especially active
in San Rafael last time I was there, but I couldn't hear any mobile
units so I was pretty confused. Solano and Sacramento makes perfect
sense, it's just funny that I can hear AMR's central valley mountain
top repeaters clearer than my own county's fire dispatch. :)

MERA's Big Rock site is across the ridge from me, so it's time to get a digital handheld I guess. I hear the Pro 96 is on an unadvertised sale as of Dec. 6th and I'll be harassing my relatives about it for the next month. :)

gotta be a typo. This has happened before and the slashdot.org guys had a field day with this. One posted, "I know Morris code, 'meow, meow, meow, meow, meeeeooooooowww...' " (if you are old enough to remember the commercials).

Mike (don't know Morse or Morris code) K6MFW

I'm not Mike, nor do I play him on T.V., but when I was listening to Tac5 earlier today, it was analog and sounded pretty good in Almaden (south San Jose).

(When the deputies keyed, hesitated, then spoke, of course.)

By the way, Yahoo held your message for about 10 hours before pushing it through the 'Net. Thanks, Yahoo.

After the morning drill, they evidently reset and did it again with a different crew in the afternoon. Much less exciting.

Nope, not that I'm able to release. I didn't pick up a copy of the press release but more or less what was posted here was it. I don't know if anyone here posted that the vehicle was a Chevy Suburban, driver found unconcious, or AMR actually heard the crash, I think that was about it that wasn't posted here.

I don't believe they've made public the condition of the driver. I'll see if I can confirm anything tomorrow.

With the statement that you don't get things done right away on normal calls as opposed to drills where things "seem" to go smoother, because everyone has a copy of the scenario. San Mateo's radio system and cooperation between fire depts is excellent. Things are quite smooth compared to, say, Santa Clara County.

BTW, Palo Alto ran a terrorist drill a couple years ago and they "threw monkey wrenches" into the scenario that only a few knew they were going to do. Helped finding out how officers and others would react had it been a real situation. It was a good plan and it sure made it seem unlike a drill as some almost panicked

Thanks for that.

Your message was posted at 12:20 p.m. and you got it back within a half hour - that's good.

I guess I'd have to call Yahoo "uneven," because I checked for mail several times between then and 5:30 p.m. and didn't get that message. Oh, well.

Monitoring Campbell PD (482.4625) as they set up at an apartment on Superior Drive (cross of Ontario Lane) for report of a male that had gone out on his balcony (second floor) and waved a handgun in the air. According to the RP - water company crew pouring concrete - the subject wanted to put his handprints in the wet concrete and was told not to. He then went into his apartment, came out on the balcony and brandished the weapon.

Imagine that - brandishing a gun (if it's real) over something as stupid as handprints in concrete!!!

34628. Dead carrier on CMARS Orange

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-12-09 22:56:39 UTC
From: Tim
Topic: 34628 Message: 34628

Off & on (mostly on...) for at least the past couple weeks, a CMARS 'Orange' channel (868.3875MHz/156.7Hz) transmitter audible in the SF Bay area has been stuck on the air.

I'm not sure which site it is, but it's usually weak but readible on a BC-796 tapped into the 31" AM/FM whip in my car in the Central San Mateo County area.

Perhaps someone can ID the site & let the State know, though I'd really, really like to think that the appropriate radio techs would already be aware of it, since this has been an issue for at least a couple weeks now.

Tim

Hey Paul , they ever find the driver ? I heard a SFPD officer say E19 and T19 checked a 100 yard area along the bank with nothing found.

From: Mobile11@aol.com
Topic: 34613 Message: 34632

Nope

From what I could see they didn't look to hard. SFFD Truck 19 had it's ladder half way extended and a Firefighter was at the end with his/her normal yellow flashlight looking around. E19 had it's "scene" lights on but nothing. They asked for a light truck to respond but cancelled them. In my opinion they didn't look very hard. The car was half way down from the road to the lake. and there is heavy brush in that area. Either A. The person got out and walked away or B. he/she was in the brush or C. The person might have gone into the water.

I didn't expect them to comb the area but they could have kept the light unit coming and just made sure.

The cops were looking around the bushes on the street and wondering around with their flashlight looking too. They asked me if I saw anyone and If I do call 911 because the pesron may be injured.

34633. Coast Guard helos drilling on 381.8

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-12-10 01:21:32 UTC
From: John Potts
Topic: 34633 Message: 34633

I think the USCG is doing some helo practice near the mouth of the Petaluma river on 381.8 MHz (currently 5:19pm). They are talking about cutting it off tonight due to darkness but are still flying right now. I thought they mentioned doing it again tomorrow (Friday) and that they would be flying out of the Petaluma airport (seems strange).

They may switch to MCI 1- TG11296 , this is roughly west of San
Carlos on 280 (north of edgewood) looking at CHP Website , it appears
someone was on phone with CHP following a DUI driver until he caused the crash.

From: stfucode3
Topic: 34663 Message: 34663

Ok so i finnaly got the BC 796D. I dont much much about the new age scanners since the current scanner i have been using is 14 years old (Realistic Pro 2011 20 channel). The software that comes with it is good. I was looking under the file section of this web site and saw tons of raido lists etc.

My question is:

I live in Marin. I am on a hill and can pick up San Jose to Sonoma from my house in Mill Valley on the old scanner. I want to know if there is a raido plan digital and analog that I can download that will have all the bay area law Enforcement and Fire agencies? Or do I have to enter them all in one by one.

Thanks
Bayard

i can tell you that i went through this 3 months ago.

bought the ARRL book for $20. free class (boy i cant believe these people volunteering all this time for FREE!!!!!!!!!!).

anyways, other than the $12 per test, that's it! (well of course then i had to go balls-out getting a hand held transmitter that costs as much as my uniden handheld scanner... then there's all the friggin' accessories... LOLLLLLL) pass the 26 out of 35 question test.

i say everyone jump on board. get your "ticket" and it might just help you when that next "big one" hits around the bay area and all cell towers gets jammed...

plus, it's just SO DARN GEEKY... ;)

Hey gang , for those who regularly monitor San Jose Fire Dept , listen up to the Rescue-Medic units and see if you hear any numbers other than the following

Med 22
Med 31
Rescue-Medic 4
Rescue- Medic 18
Rescue- Medic 29

the other day I heard Rescue-Medic 2 , am wondering if they switched it with an existing R/M or if they have added new ones. thanks !

Heard two Santa Rosa CHP units say they were enroute to Oakland for impact.
Any idea what this might be. Is this the Avoid the 13 program they usually
have over the holidays.

i can tell you that i went through this 3 months ago.

bought the ARRL book for $20. free class (boy i cant believe these
people volunteering all this time for FREE!!!!!!!!!!).

anyways, other than the $12 per test, that's it! (well of course then i
had to go balls-out getting a hand held transmitter that costs as much
as my uniden handheld scanner... then there's all the friggin'
accessories... LOLLLLLL) pass the 26 out of 35 question test.

i say everyone jump on board. get your "ticket" and it might just help
you when that next "big one" hits around the bay area and all cell
towers gets jammed...

plus, it's just SO DARN GEEKY... ;)

It the same program in Oakland, its the state assisting local pd's. Patrol units and they h-30 or h-32. You can hear the chp units on their local chp freq and on the local dept's radio too, they give each unit a portable.

SAN FRANCISCO(BCN)
The San Francisco Police Department reports that Operation Impact
will concentrate on the Bayview police districts this weekend.
The program is a collaborative effort between the police and the
California Highway Patrol to enforce violations that are often precursors to
violence, such as reckless driving, weapons possession, and narcotics use and
sales.

So can you give a hint as to why they removed it? Were they
really concerned that Al Quada would get Target's (the department
store) frequency? Yet they allow bayscan to exist??

I really am curious what they thought was sensative information,
given that most of the data comes from the government??

Always nice to know that we're winning the fight for those freedoms that we hold so dear.

With groups such as Bayscan and Scannorcal left open, I can't help but wonder if it was actually someone from the [official] Department of Homeland Security, but rather some "wanna-be" who thought they were doing the right thing. It's faded some as time has passed since 9-11, but there were plenty of people in scanning lists (amongst plenty of other places) back then that were full of self-righteous more-secure-than-thou proclamations based on uneducated speculation.

Bayard,

I have a Pro-96 and can send you and Excel spreadsheet that pretty much covers everything in the north bay down to SF and over to Richmond. It would be easy to just send you a P96 file if you had a Pro-96 but you can copy and paste the data from an Excel spreadsheet into the Butel 796 program if you have that. If not, you would at least have a list of frequencies, PL tones, and talk groups if you really want to enter everything by hand. If you want a copy, let me know by tomorrow before noon since my mom is quite ill and I will be leaving for Utah for an extended period.

Regards, Jim

Homeland Security?? Sounds like your right not the real deal but maybe a "wanna be" or someone playing what they think is a "good patriot" I liked the group it has some good info. IF it is true that it was the Dept of Homeland security, Then that is really pretty pathetic.......... Cmon, like there was any info on there that would be pertinant to any terrorists. Yeah, what Target stores, or The local garbage company? security freqs? PLEASE!!! The dept of homeland security is a nice name someone thought up to try to make the people feel "safe" it is useless. ok now I feel better..... Thanks lol :)

I herd a SJ MED 30 on 453.100 asking for a code 2 ambulance to a 2nd alarm
fire
and again on 856.5375 giving instruction as to where they wanted the
ambulance to stage.
I did not catch where the fire was out.
They have now requested a second standby ambulance as the first ambulance is
taking a injured firefighter to the hospital.

From: caladded@aol.com
Topic: 34686 Message: 34690

IC advised that the fire was contained about 15/20 minutes ago
and now advises 6 units involved in fire on the 2nd floor , 2 with
smoke/water and 3 units with water damage on 1st floor.

I am a bit surprized 6 units held to a 2nd alarm. Be interesting to see
some footage on this, took them quite awhile to contain and control this (
havent' actually heard an under control, but they have released one Engine and one
Chief). Engine 15 was brought in for EMS reasons.

I also missed the 2nd alarm response , but its usually 2 Engines unless that
has changed. (plus 1 truck, chief , Air 6 , HIT 29)

I am also on the top of a ridge in Mill Valley.
GREAT place to monitor the local Bay Area.
Radiorefernce.com is a good site.
As you probably know Marin is going digital.
Most of the comms will be "in the clear" e.g. not encrypted, as I have previously stated.
Contrary to other posts that said it would be all encrypted (bad info).
Any particular thing you need, just ask. I've been doing radio here for 35 yrs.

Am curious about the MERA TG's. I just received a PRO-96 file from someone else in Marin & his TG list was a LOT DIFFERENT than those shown on RadioReference.com I realize that this MERA thing has been a work in progress & has gone through a lot of changes, especially with the Tiburon "THING" holding up some of the sites.
QUESTION: is the RadioReference list not caught up with the real world?
I no longer live in the Bay Area (retired & moved to Plumas County) but am in Marin regularly & any help from those of you "close to the action" is helpful.

Thanks

Brian

34698. RE: [bayscan] BC796D Help

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-12-11 16:49:30 UTC
From: Roger Strohmeyer
Topic: 34663 Message: 34698

Hey Brian, in my opinion Radio Reference is way off as far as the Marin MERA stuff goes so I'm surprised it consistently receives so much praise especially for the Marin frequencies\MERA TG's section. I have a list of MERA TG's that hasn't been updated in awhile because my 296 is at Uniden but it's quite different from the Marin TG's on Radio Reference, that's for sure. (there's old TG stuff there on RR that needs to be removed)

I'm really curious to see how the new 2005 Kelty book looks as far as Marin goes. I will be trying to pull together and maintain the ever-changing MERA TG's list again as soon as I get my scanner back from Uniden. And as usual, I still have the MERA TG list in word format but I just haven't been updating it...if you dont already have a copy and would like one, please contact me off list and I'll send you one.

Thanks,

-Roger

I am curious. Did they email you? Was it really them? This seems strange unless it was just one guy in DHS thinking he is doing the right thing but DHS has no such directives (there are nutty gummit people).

Of if it was what Don Root said that yahoo deletes groups with no activity.

The whole thing seems strange that DHS was opposed to IG frequencies, or an imposter? (or perhaps a renegade garbage company with "secret" frequencies they use to hit the pickup spots before their competitors).

Mike

Those complaining about radio referances' MERA ------ His original lists was like Keltys and it turned out to be way off. Here is a suggestion , for those who believe they have the most updating info.....send it to RR , that is how he gets the information. Considering RR is free , its without a question one of the best resources around. Think about it , its free , covers not only all 50 states , but goes beyond our borders, thats pretty good for FREE !!

Bayard,

I have a Pro-96 and can send you and Excel spreadsheet that pretty
much covers everything in the north bay down to SF and over to
Richmond. It would be easy to just send you a P96 file if you had a
Pro-96 but you can copy and paste the data from an Excel spreadsheet
into the Butel 796 program if you have that. If not, you would at
least have a list of frequencies, PL tones, and talk groups if you
really want to enter everything by hand. If you want a copy, let me
know by tomorrow before noon since my mom is quite ill and I will be
leaving for Utah for an extended period.

Regards, Jim

All horse beating aside, I think we're all wondering what on earth anyone could consider "sensitive" about industrial frequencies. Keep in mind we're all very capable of going on google and finding the frequencies used by the FBI, the Secret Service, Air Force One, the Justice Dept, the Transportation Safety Administration, etc! (Sure some are encrypted but there are very many that aren't.) So I'm genuinely curious... What was it?!!! I agree with everyone else that you were probably just had by some confused nutjob. Still it's a shame, because as boring as IG freqs can be, that's one less resource for people who are new to this hobby.

34708. Lost in translation? Or something?

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-12-12 02:15:31 UTC
From: Evan Platt
Topic: 34708 Message: 34708

So driving 880 North, I see a speck of a vehicle in my rearview weaving in and out of lanes, cutting people off, judging by my speed, he's going 90+. As soon as I see enough of a vehicle to get information on, I call 911. Please hold. About 2 minutes later, I get through, tell them there's a reckless 90+ driver, weaving, cutting people off, taligaiting, etc. White Ford explorer, didn't get a clear view of the plates, but it was 5???443. I'm confident of it being 5 something, and confident the last 3 was 443, didn't catch the 3 letters, but it was letters, not a commercial plate (i.e. Number, letter, Number number number...) It also had a amber light bar on top - not lit, but had a amber full size light bar. "Thank you, we'll get that information out to our officers." About a minute later: "Golden gate units, citizen report 23103 (And that's about the extent of what she got right) reported about one ago, N/B 880 just past the scales, White ford Expidition, no plate information given, weaving at a high rate of speed. Golden gate clear."

Wow. If I were a cop, I'd ignore that BOL. However with the partial plate information I gave, and the fact that it had a light bar, I'd be a little more cautious for the vehicle.
So what happened to the partial plate, the fact that it had a light bar, and the Explorer?

The next time I call something in to CHP, should I ask her to put me on speaker while she dispatches it so I can correct the information they give out wrong?

Next time I hear a BOL that contains no information, I won't necessarily say "Gee, what kind of idiot would call in and report that with NO information??"

Granted, had the vehicle not had a light bar, I wouldn't have called without a full plate, but geesh, butcher the information please?

</RANT>

UPDATE:
Caught a breif 10-15 from 21 Edward 2, unkown how many in custody.

Dispatcher pulled something weird because I couldn't hear mobiles all
of the sudden. She must have shut off the repeater, and the state
highband central freq (483.825) didn't have any repeated traffic of
34 units. I ended up hearing the initial dispatch, a bunch of 34
units responding and then dead silence until the dispatcher informed
all units of the 10-15. And now I can hear mobiles again so the
repeater's back on... shucks lol. I'm going to sleep...

CHP is notorious for that Evan. I have called many times for various reasons (wreckless, DUI, road rage, large debris in the road, people racing, etc) I have NEVER once heard a dispatcher get my info out correctly. Always has the wrong color car or wrong location, and usually leaves off pertinant info. I also got tired of getting rude dispacychers or being put on hold forever. I finally Emailed CHP with my complaints(worded very professionally and maturely helps alot) and actually got a Higher level supervisor from Dispatch headquarters or maybe it was from sac(can't recall) to call me at home and listen to my concerns and explain certain things and let me know what they can or would do about certain things.. I also got a # from her that will by-pass the recording as well as one for the dispatch supervisor on duty at any given time. Now I was very impressed and satisfied with this response from Them. As I explained to her, When ever I call, I feel I am doing what I can to help protect another and not just myself.. It could be your mom, dad or any family member out on that road that could be effected by (insert situation here ...) anyhow yeah CHP is pretty bad at relaying the info properly on these type of calls..

34716. Does this sound Bayscan????

Yahoo group: bayscan (2004-11 — 2004-12)

Topic: 34716 Message: 34716

I can't take credit for this, but it sure does look a lot like what goes on in most scanner group forums I've been looking at lately. This is HUMOR; so don't get your underwear in a knot! -

How many forum members does it take to change a light bulb?

1 to change the light bulb and to post that the light bulb has been changed

14 to share similar experiences of changing light bulbs and how the light bulb could have been changed differently

7 to caution about the dangers of changing light bulbs

1 to move it to the Lighting section

2 to argue then move it to the Electrical section

7 to point out spelling/grammar errors in posts about changing light bulbs

5 to flame the spell checkers

3 to correct spelling/grammar flames

6 to argue over whether it's "lightbulb" or "light bulb" ... another 6 to condemn those 6 as stupid

2 industry professionals to inform the group that the proper term is "lamp"

15 know-it-alls who claim they were in the industry, and that "light bulb" is perfectly correct

19 to post that this forum is not about light bulbs and to please take this discussion to a light bulb forum

11 to defend the posting to this forum saying that we all use light bulbs and therefore the posts are relevant to this forum

36 to debate which method of changing light bulbs is superior, where to buy the best light bulbs, what brand of light bulbs work best for this technique and what brands are faulty

7 to post URLs where one can see examples of different light bulbs

4 to post that the URLs were posted incorrectly and then post the corrected URLs

3 to post about links they found from the URLs that are relevant to this group which makes light bulbs relevant to this group

5 to post to the group that they will no longer post because they cannot handle the light bulb controversy

4 to say "didn't we go through this already a short time ago?"

13 to say "do a Google search on light bulbs before posting questions about light bulbs"

1 forum lurker to respond to the original post 6 months from now and start it all over again.

this looks weird on CHP webpage , with flooding around 101/1 in
Marin County (couple other locations) and in the Ravenswood area by
the west end of Dumbarton bridge. PG&E plant/ Menlo Park Fire
training site , reported levee break, flooding.

Its NOT raining !! but apparent very high tides.....
unusual.

About half an hour I heard several CHP units assisting people who had driven into flood water under an overpass on 101 that was deep enough to stall their cars. Lots of 11-85s.

Marin Sta. 34 "Violet" - 42.16 - Although I don't think there's anything going on anymore.

This is what EDIS posted for San Diego regarding the high tides. Haven't seen any warnings or watches for the Bay area however:

NATIONAL WEATHER SERVICE SAN DIEGO CA
200 PM PST SUN DEC 12 2004

ORANGE COUNTY COASTAL AREAS-
SAN DIEGO COUNTY COASTAL AREAS-
200 PM PST SUN DEC 12 2004

...MINOR TIDAL OVERFLOW POSSIBLE IN THE MORNINGS THROUGH TUESDAY...

MINOR TIDAL OVERFLOW AND FLOODING ARE POSSIBLE AS A RESULT OF VERY
HIGH TIDES EACH MORNING THROUGH TUESDAY.

LOW LYING AREAS SUCH AS SUNSET BEACH...NEWPORT BEACH...CARDIFF...LA
JOLLA SHORES AND MISSION BEACH MAY EXPERIENCE MINOR TIDAL OVERFLOW
BETWEEN 7 AM AND 11 AM EACH DAY THROUGH TUESDAY. COASTAL RESIDENTS
AND PROPERTY OWNERS SHOULD MONITOR WATER LEVELS DURING THESE PERIODS
AND TAKE ANY ACTION NECESSARY TO PROTECT THEIR PROPERTY.

HIGH TIDE FORECASTS FOR SAN DIEGO BROADWAY PIER:

MONDAY DEC 13.......7.5 FEET AT 910 AM.
TUESDAY DEC 14......7.1 FEET AT 959 AM.

$$

Hi Dave, radioreference.com and google are full of conflicting information, but in every case the FSP is on an LTR Trunking system maintained by either Champion Communications, or Crystal Communications, or both are in use... who knows. Regardless, you'll need a scanner capable of trunktracking LTR, like a RS Pro-92 or one of the Unidens that can do it (796D, etc.). I'm sorry I can't verify any of these systems for you but I have a Pro-93 which can't track LTR and has no discriminator tap (and I'm afraid to solder one lol). It's either on:

System: Champion Communications Service
County: Marin
Type: LTR
Use: CHP Freeway Service Patrol

Frequencies:
483.9625 (3) 484.0875 (5) 490.9375 (10) 490.0625 (18)
484.9875 (20)
489.9875 (?)

Operations:
FSP Golden Gate Dispatch 0-18-138

-OR-

Another Champion Communications System that's completely different -
http://www.radioreference.com/modules.php?name=TRSDB&sid=2402

-OR-

A Crystal Communications System -
http://www.radioreference.com/modules.php?
name=TRSDB&sid=472

The only thing these have in common is that they're all on the antenna farm on Big Rock Ridge above Lucas Valley (where MERA's east site is). Good luck! :)

Actually you can monitor the system on any scanner but it just wont switch
the frequencies correctly.

I put the frequencies into one of my scanners in one bank and can hear it
fine. I could put it into one of my scanners that does LTR but I just
wanted to monitor it a bit first.
Its a pretty boring system to monitor in my opinion :)

This sounds code 4 now - last I heard was that there was one person with a .40 gunshot wound, but the officer said the guy was talking - didn't sound absolutely life threatening. Not sure exactly what happened. Sounds like almost all of the Campbell PD is on scene and they are calling in two off duty folks to carry out crime scene control.

It's a serious incident to be sure as there is a PIO assigned. If I had time I'd head over there, but am stuck in classes until 2:00! ARGH!

I'm going to guess life in prison (not death penalty). I was right on about OJ being innocent, but I was wrong about Peterson found guilty - I was sure he'd be found innocent. So who knows. I'm 1 for 2 now.

KNTV11 has a web site (I don't have a TV - well, I have a computer with a tv tuner, but no cable or satellite). On the website they have someone text messaging them stuff live... "Lee Peterson just walked in, looks tense", etc... I'm just waiting to see "BABBA BOOEY" <grin>

We'll see. About 5 more minutes it looks like.

I'm confused. I thought it looks like they said he'll be sentenced today,
but then I heard "He'll still be in court until the sentencing, which will
be in a few weeks."

Also, on the audio, I heard what sounded like a county fire ringdown in the
background - a few two-tones, then, audio that sounded like a fire tone-out. :)

34745. MAJOR EVENT - GANG FIGHT - SAN JOSE

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-12-13 23:27:40 UTC
From: Craig Rose
Topic: 34745 Message: 34745

Large gang fight with bats and rocks and a vehicle that went across a yard.
One victim with severe closed head trauma from repeated beating with a rock.
Second party was run over by a black pickup truck that is outstanding.

This occurred near Piedmont High School with two different scenes.

SCENE 1 - Shaffer Drive at Kimlee Drive
SCENE 2 - Hostetter Road and Shaffer Drive

SAN JOSE FIRE - 155.025

ENGINE 19 (on scene)
TRUCK COMPANY 2

SJPD CHANNEL 3 (460.200)

Partial list of involved units

56W4
52M1
51M1
51W2
51W3
6M10
5W10

As I was locking up, I heard multiple sirens. I headed east on Kimlee (as I thought the action was on Piedmont Rd.) and found Engine 19 as well as multiple PD units JNO Kimlee on Shaffer. Couldn't really poke my nose around much, but I saw E19's crew, tending to one patient on the front lawn of one of the homes on Shaffer. I saw what appeared to be 3 or 4 J's sitting on the curb in handcuffs. It also looks like a couple of vehicles were involved as they were just randomly just sitting in the middle of the street.

Guess it depends on where you work.

I'm temping at a fairly high-tech computer company, and when I told one of my coworkers about the Pro-83, he wanted to see it. So the next day I brought it in. He was kind of shocked - he was like "Well, I meant leave it in your car and I'd come out and see it! Security may ask you to take it outside if they see it!"

Ironically, a few days before that, I had started bringing in my Vx-800 on my belt - small two-way vhf radio - http://www.vxstd.com/en/products/products_land_pr.html second radio down. It's about the size of a Minitor pager with a 3 inch antenna.

Security at this company is all retired sheriff / PD, so most of them notice when you occasionally wear a basketweave belt and give you a little more leniency. :)

But for the most part, my scanner is on 'page' only. Especially now that I found out the CEO is about 50 feet away from me. <Grin>

One of the advantages of the BC246T is that it is size of some pagers and many cellphones. Its less noticeable if your using a stubby antenna, its all the better. I really don't like it when strangers ask about a scanner of mine, start asking questions like can you hear drug busts, etc., to which I also answer NO, which is of course not true. Should they come out with a version with digital at this size, it would really be sweet?

For instance, a BC246T would have been no good over at the Scott P. Trial today as the Talkgroup (15040) I mentioned earlier in the day is, of course, digital.

Thanks to Ed for the address clarification. I did, finally, find the place and it turns out this incident was less than four miles from my house! At any rate - nasty fire with huge amount of smoke generated by a home just crammed with garbage. It was quite nasty. Overhaul for this one is a nightmare!

At any rate - quote of the evening - I was talking to a member of Fire Associates and mentioned that the owner of the house should have held a garage sale to get rid of all the clutter and garbage. He turns to me and says - "No, should have been a fire sale." Sheesh! ;^)

Okay, on to the shots:

the only way calling CHP ever works is if you call late at night and they keep you on the line so you can update the location and provide more info. I have called in about 10 DUI's and i have only seen them make traffic stop on two of the calls. I followed these 10 people from Santa Rosa all the way to San Francisco (becvause thats was my commute home). Most dispatchers want to just say "thanks" and hang up on you.. I try not to let them. I also say "Im reporting a DUI, I'm an Off duty Paramedic. Generaly they wont hang up on me right away."

Subject: [bayscan] Re" Lost in Translation or something??/

CHP is notorious for that Evan. I have called many times for various reasons (wreckless, DUI, road rage, large debris in the road, people racing, etc) I have NEVER once heard a dispatcher get my info out correctly. Always has the wrong color car or wrong location, and usually leaves off pertinant info. I also got tired of getting rude dispacychers or being put on hold forever. I finally Emailed CHP with my complaints(worded very professionally and maturely helps alot) and actually got a Higher level supervisor from Dispatch headquarters or maybe it was from sac(can't recall) to call me at home and listen to my concerns and explain certain things and let me know what they can or would do about certain things.. I also got a # from her that will by-pass the recording as well as one for the dispatch supervisor on duty at any given time. Now I was very impressed and satisfied with this response from Them. As I explained to her, When ever I call, I feel I am doing what I can to help protect another and not just myself.. It could be your mom, dad or any family member out on that road that could be effected by (insert situation here ...) anyhow yeah CHP is pretty bad at relaying the info properly on these type of calls..

Good point about keeping them on-line. Remember how many calls they have and a lot of those calls are BS and shouldn't be 911 calls , they should be either on a 7 digit line or 511 etc. So the dispatchers I am sure are 1) busy 2) understaffed. I had a dispatcher stay with me for a DUI I followed down 101 and east on 237 , once it got to about 80mph she was cautioning me to stay safe and advised breaking off , which I did. She had a real good description and it was put out correctly.

I've never had any problems with chp. I've called in many reckless and
DUI drivers. I ALWAYS get a plate #. I've never had a CHP officer act
like wanted to get off the phone. very courteous. Al the Bolo's have
been right on also. If you present yourself professionally and stick to
the point, they are always happy to assist. they'd rather handle a phone
call now than a TC or fatal crash later..

Well, I don't have a scanner in my car, only a VHF radio with the extender frequency on it, so I often won't hear the call when I call it in. I of course act professional since I feel for the job the dispatcher is doing, and as I said, I wouldn't have called it in having only a partial plate, but knowing the type of vehicle it was, the first number and last 3 numbers, and the fact that it had a amber light bar IMHO made it a 'target' and easy to spot. Of course, as I mentioned, the only thing the dispatcher got right was the color. She gave the wrong vehicle model, and said "no plate information given". We all know no officer would even bother looking out for a vehicle with a call put out like that. And I wouldn't bother with calling it in unless there was something that would REALLY make the driver stick out - i.e. going 20 MPH above the flow. In this case, he was going 85-90+, weaving and cutting people off fairly noticable, but still not extremely above the flow.

I had the opportunity to spend a few hours at the CHP Dispatch Center in Vallejo and it was a very interesting experience.

I know that the CHP gets about 120,000 calls a month or some crazy figure like that since almost ALL 911 cell calls get routed to them.

One of the things I was able to do was have a headset plugged into the incoming calls and I can tell you there were many non emergency related calls. There is even a button they can hit down to "mute" the call takers audio since sometime they are laughing at what the callers are stating. :)

Here is the news off that gang fight.

Two people have been hospitalized and several people are in
custody following a gang-related fight in San Jose this afternoon,
according to police Officer Gina Tepoorten. A group of eight to 10
men allegedly participated in the 3 p.m. fight in the area of
Hostetter Road and Shaffer Drive, according to Tepoorten. One male
victim was run over with a car, and another victim was
stabbed. Both were transported to an area hospital with non-life
threatening injuries, Tepoorten said. Three or four male suspects
have been taken into custody in connection with the fight. Tepoorten
said police have not yet determined the extent of these suspects'
involvement in the fight.

34791. Unmarked Nissan Altima Law Enforcement???

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-12-15 03:22:09 UTC
From: Brian
Topic: 34791 Message: 34791

Today, I saw an unmarked light-green Nissan Altima make a traffic stop. It's emergency lights were strobes operating with the vehicle's normal exterior lamps. (I'm very tired. Did that make sense?)

I circled the block to get a better look. He finished the traffic stop by the time I returned. He waved to the kids he pulled over, as if he knew them. The Altima had normal California plates. The only obvious extra equipment on it was a short 4-inch whip-type antenna mounted inside the cabin, just above the third break light. The driver was in a suit and tie. He sped away southbound on Foothill Expressway from San Antonio in Los Altos.

I don't know if this really was law enforcement, and if so, which agency.

in a suit and tie?? and was waving as the people left? Doesn't sound like a traffic stop to me.. I saw a car a couple days ago that had his headslights flashing back and forth. seems like the new craze in car headlights, not law enforcement. I'm guessing no on that one.. On the same note sort of.. was on 580 near 205 in the altamont and CHP was doing traffic stops with a beat up ford probe, white with light bar in the back and unmarked..

Never seen a PD use a Nissan. Interesting.

So by 'strobes operating with the vehicles normal exterior lamps' - it sounds like they were hide-away strobes. They're mounted right next to the normal bulbs so they're 'invisible' when off. What color, and front and rear? In California, for a vehicle to be legally code 3, it has to have (among other things) a forward facing steady red light - however this can be turned off once the stop is made.

Just to the people on this list who are smarter than the average bear - If you see a vehicle attempting to pull you over and you have reason to believe it ISN'T a legit police officer, turn on your hazard lights and drive at a safe speed while calling 911 (or the local 7 digit PSAP) on your cell (I personally have the 7 digit PSAP's for the routes I typically travel). Tell them you have a vehicle that isn't a typical marked police car attempting to pull you over. The dispatcher may say its not one of their units and send a local unit to assist you - but it could turn out to be a 'border' police agency - i.e. in Mountain View, you may get pulled over by a Palo Alto police unit if you're close enough to PA. By turning on your hazards, it's harder for the agency to claim failure to yield. Then make sure to make the case to call 911 AS SOON as you turn your hazards on and see the police car.

Of course this is more likely to happen to a female if it's an attempted rape, but it could also be a robbery attempt.

Covered pretty well on Snopes:

http://www.snopes.com/horrors/mayhem/fakecop.asp

I'd say about 8 years ago in South San Jose, I saw a similar situation. It was a lighter blue or green Ford Taurus. No apparent marking, no apparent E plates, just normal plates, however the vehicle was equiped with a strobe on the drop down sunshades and siren. I figured it must have been like an FBI car or something, or perhaps an undercover....

Ya know, that's a good idea. Beat up car to catch people off guard.

Hey, they should have a CHP officer off the side of the road do radar while his 'friend' is in the car in front of him. You know how many times I see people go 90 right by a officer on a traffic stop thinking "He's busy.. I can fly right past him"...

Yeah i've seen more than a few of the flashing headlights in the front
lately. Mostly on new SUV's. Xterra's, 4 runners etc.

I'm surprised that tactic isn't used more.. The only time i've seen it
is on that stretch of road... The car looks like its gonna blow up..
Dented, faded white, then has the typical lightbar in the back left
passenger seat side area..

Real good suggestion by Evan. When EPA was having its hayday in the early/mid 90s , we had Plenty of UC cars. I remember walking the dog early one morning out by the dumbarton and a whole slew of U/C showed up for a " meeting" before running around town kicking doors in. One of the vehicle was a mustang which had the lights. Like pointed out , the colored strobes , when turned off are invisible. neat trick. as far as alternating flashing headlights, they are illegal for anyone other than emergency vehicles. a moderating (not flashing) headlight , is legal for motorcycles in the daytime. In fact they are legal for all 50 states.

Huh... 3.8 seems about right, but I would have sworn it was a -lot- closer
than that.

Thanks for the info.

Officer Shoots Home Burglar

POSTED: 8:44 am PST December 14, 2004
An off-duty highway patrol officer walked into a burglary in progress in his own home in the South Bay.

Police say the officer arrived at his home in Campbell and found the suspected burglar in his house.

He shot the man, who then ran out of the house. The officer eventually caught him.

The man is being treated at a hospital. Police say he will likely be booked on burglary charges.

Update: About 1045pm Mill Valley units transported two adults and a juvenile to the station. They were detained at gunpoint on the grounds of Tamalpais High School after a passerby reported three subjects with ski masks and flashlights acting suspiciously on the campus. Mill Valley PD obviously treated the call seriously, but there are no further details.

We have lots of cars that look like any family car on the road. They
have normal passenger car plates and many have completely disguised
antennas. Most of these cars have strobes inside the standard head,
turn and tail light assemblies, along with hidden red/blue LED lights .....

They are primarily used for detectives and surveillance's ....

Most likely a detective in an unmarked car. You can make car stops in unmarked cars but you are prohibited from using an unmarked car for the primary duty of traffic enforcement. However, if a detective is out and about and sees a violation, he/she can make a traffic stop like any other marked unit. License plates can be the "normal" type and each agency has their own way of equiping their cars for emergency driving.

For those with an interest...I have finally had a chance to upload images of this incident to my website. A word of warning - if you are looking for big flames - you ain't gonna find it here. This was a fire dominated by heavy, HEAVY smoke. With that said, most of these images focus on the men and women that fought this fire.

Hope y'all enjoy!

Cheers!

Yo Craig , did you see KTVUs coverage of the 3rd alarm in Hunters Point in SF around Midnight. Now that baby had flames. Roofing Company fully involved. Still lot of white/gray smoke at this hour.

11 or 12 Engines , 5 Trucks , 1 Division Chief , 4 Battalion Chiefs , 1 Attack Hosetender (unit with 2000' of 5" line and a 55' boom with a 1000gpm nozzle) 1 Rescue , 1 Mobile Air supply and a few other pieces of equipment.

0812 hours. (going back to bed) special thanks to Ben for his feed , great monitoring this fire last night.

Brian.

There are plenty of cars out there from agencies all over the area that might be using a car like that. Most of the 'unusual' ones are acquired from an asset forfeiture from some crime. These usually go to surveillance or special operations units. I can think of at least five that we at the SO have. I get to drive one fairly regularly here out of the West Valley area. In fact, I made a car stop on 85 yesterday when a gentleman blew past me at 90+.

I saw an interestingly-modified Crown Vic this morning: a CHP K-9
unit, and the hood had a huge louvered vent on it like a hotrod
might. I'm guessing that's because there are so few CHP K-9
units (I've never seen one before) that they have to run code
for *long* distances when they're needed?

Does anyone know when Newark Fire will be joining alco dispatch? I remember that after Fremont and Union City made the switch Newark would see how it worked and would make the change in Nov/Dec of this year.

When are they going to do the move?

Well, that is a pretty normal response for a 3rd alarm in SF. The SFFD has always been a dept with the idea of large response , mainly because the city is so crowded and the buildings are so close together that rapid spread of fire is a major concern. But this certainly was a major fire and from monitoring it , had there been a little later notification and or exposure problem it easily could have gone to a 4th or 5th alarm

Don't know for sure , but if they need to run " long " distances , seems more likely they would use a local or county dog.

The louvers on the hood are to vent the hot air from the engine as it runs all the time in the summer to keep the air conditioner going to keep the dog cool.

34828. some Pro-96 program questions

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-12-15 23:24:35 UTC
From: Brian Verhalen
Topic: 34828 Message: 34828

I have a few questions about how to program the 96 for trunked items.

I have the Win-96 software so that makes it a lot easier, and have been loading & changing things to get used to the radio & the software. Am very pleased with both the radio & Win-96, & working with both has helped learn how they work. I did receive a P96 file from Jim Cooke in Mill Valley with a lot of N Bay items on it. Looking how he had things entered helped & gave me some good lists for MERA (since RadioReference is not current) & other parts of the Bay Area when I am down there. I no longer live in the Bay Area but am there regularly.

The issue is:

When entering trunked items my understanding is that with MOT all that has to be entered are the control freqs, & can start with bank X 00 & could enter several different trunked systems as long as they are the control freqs.

On the EDACS side, must enter all freqs in LCN order & must start with X 01 & have only that system on that bank.
Can enter CONV on either system after the trunked items & will work.

The question is do I have to enter TG ID's on both systems, or just EDACS?

If the closed box is not checked, would hear everything without entering TG's? or must have something entered there for both or??

The boxes next to the TG ID list:

(per Win-96 help page)
To the left of the talk group ID list are three other configuration items:
· A column of ☐radio buttons☐ (a one-of-many selection) that allows you to choose which of the 5 talk group ID sub-banks is currently displayed in the list.
· A column of check boxes that allows you to individually ☐turn on☐ any or all of the 5 talk group ID sub-banks. This is analogous to turning on the sub-banks from the scanner☐s keypad from the ☐T IDbk 01234☐ (ID sub-bank mode) display.

am not totally clear on what these do.

Any help on clearing up my brain on these would be helpful.

Thanks

Brian

Yes, 'hide-way strobes'--that's what I meant. I never saw the vehicle from the front as it was lit up. I only saw a quick glimpse of it's rear as the lights were flashing. I couldn't tell you exactly what color it's rear strobes wer. They weren't red or blue. Maybe white or yellow, but definitely bright. And they were on as he was parked and talking to the driver of the other car.

> AS SOON as you turn your hazards on and see the police car.

I has this exact thing happen to me when I first moved to the Bay Area. A Santa Clara SO warrant officer made a stop on me. He was in an unmarked sedan, plain clothes. I did as you said--I turned on my hazards to signal my intent to yield. However, I didn't have a cell. So, instead, I headed directly for a freeway call box.

This officer was ~EXTREMELY~ pissed that I didn't yield immediately. I explained to him my concerns about his identity. Not to mention that he initiated the stop right at a major freeway interchange--not exactly a safe place to stop. This did absolutely no good. In fact, he threatened to draw

his handgun if I gave him further trouble! What a wacko.

> enforcement.

I don't know that he was law enforcement--he took off before I could circle the block and ask him. ;-)

I never saw the car from the front as it was lit up; I briefly only saw the back. A few seconds prior to seeing the vehicle, I did hear the chirp of a siren. I was pulling out of a parking lot, making this particular vehicle out of my line of site at the time. This was the only vehicle in the area at the time, so I'm assuming the siren came from it.

A couple months ago I witnessed U.S.Marshals do a felony stop on a vehicle,(with a somewhat late assist from CHP & Visalia PD). USMS &CHP had followed these guys from another jurisdiction. The feds were driving a late model Chevy ext. cab pickup with only hidden strobes & it had "#### Construction" on both sides. Toolboxes & the works. If you saw these guys going down the street, you'd think they were a couple of contractors. As a matter of fact, when VPD rolled up, the officer seemed confused who was who. Down here in Visalia the big thing with those guys who drive the tricked out riceburners is the hidden strobes. I probably wouldn't pull over until I was sure.

34843. Police checkpoing in SJ this weekend - interesting listening

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-12-17 01:14:04 UTC
From: Johnathan Corgan
Topic: 34843 Message: 34843

According the Mercury News:

"San Jose police will be running two drunken-driving checkpoints this weekend."

"The purpose of the checkpoints is to keep all motorists and pedestrians safe during the holiday season. The police department asks for community cooperations with this goal."

"The first checkpoint will be Friday night on King Road between Story Road and Interstate 680. The second will be Saturday night, on Saratoga Avenue at Stevens Creek Boulevard. Both checkpoints will screen drivers on both sides of the roadway. The checkpoints start at 9 p.m. and will run until approximately 3 a.m."

These make for interesting listening, and usually occur on SJPD Ch. 9 (460.1000) or on SJPD Ch. 11 (460.0500). While the given purpose of these is to find DUIs, I've been surprised at how frequently warrants and suspended licenses pop up with otherwise normal (sober) drivers.

Last one of these I heard, they were using it for cadet training. Their radio traffic can get interesting vs. the normally dry, professional, clipped reports one usually hears from SJPD. Even the veterans, though begin to show their frustration as the tow truck response times grow and they start stacking up rows and rows of cars to be impounded :-)

34850. The Secure Cops Alert Network

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-12-17 09:33:24 UTC
From: Robert W. Sanford
Topic: 34850 Message: 34850

I know just about everyone on the list will find this interesting. I signed up for it a few days ago and have not received on alert yet so we will see. The link is posted below the information on it.

Enjoy,

Robert
BayScan

The Secure Cops Alert Network

The Secure Cops Alert Network, or "SCAN" is designed to be the first national alert system that allows local police departments and public safety agencies to broadcast emergency information directly to the computers, mobile phones, pagers and PDAs of their neighborhood and local residents. Through SCAN, residents can now receive immediate alerts for neighborhood crime, sexual predators moving into neighborhoods, weather, natural disasters, cyber attacks, fire advisories, health emergencies, Amber alerts, local acts of terrorism as well as neighborhood public safety information.

The events of September 11, 2001 have created heightened community awareness about the importance of localized emergency information programs. Public funds are not available to support expanding the local programs that are needed for increased community security. Using cutting-edge technology, SCAN has created a way for public safety agencies to communicate directly with the citizens they protect.

SCAN is free of charge to all public safety agencies. It is provided free of charge to the public for the first year. There is a minimal charge of $2/month in year two.

SCAN is presented to California residents by the California Organization of Police and Sheriffs, or "COPS." As a non-profit organization formed for the benefit of law enforcement officers and their families, COPS has been widely recognized and supported by law enforcement, government agencies and the general public for its efforts in public safety.

BROADCASTING ALERTS
SCAN broadcasts alerts on computers and wireless devices such as cell phones, pagers and PDAs.
Simply download SCAN from the Internet or from a SCAN installation CD. SCAN maintains a twenty-four hour, seven-day service and support bureau that collects data, assesses risk and broadcasts alerts throughout the system.

Date: 2004-12-17 17:06:29 UTC
From: Ben
Topic: 34851 Message: 34851

What freq does digital cable run on?

You may have read in last week?s San Francisco Chronicle and San Jose Mercury News that Comcast has disappointed its customers around the availability of its digital video recorder. But if you?re one of the people who?s been waiting for Comcast?s DVR to come to the Bay Area, here?s good news:

This Friday, the TiVo? box <http://www.tivo.com/2.1.asp> is FREE to fed-up Comcast customers like you.* That?s right, free. You pay the low monthly subscription fee, but the TiVo? box is 100% on us. Here's the scoop:

*WHAT:
We're giving away TiVo boxes this Friday, December 17, from 11 AM to 1 PM to disappointed Bay Area Comcast customers who have been waiting and waiting and waiting, much to their chagrin, for the Comcast version of a DVR.

*WHY:
Because 'tis the season of good tidings! And while Comcast has let down its customers with promises unfulfilled, we can bring Joy NOW by gifting them with the critic's choice of digital video recorders: a TiVo box. Yes, FREE! You'll pay the low monthly fee (or pay for product lifetime service), but the TiVo box is 100% on us!

*HOW:
Just come to TiVo headquarters in Alviso tomorrow between 11:00 a.m. and 1:00 p.m. and bring the following to qualify for a FREE TiVo box:

* 1) An original Comcast cable bill, current within the last 2 months
* 2) A new toy or piece of clothing to donate to The Family Giving Tree charity <http://www.familygivingtree.org/>

*WHEN:
One Day Only, for 2 hours or while supplies last!
Friday, December 17
11 AM - 1 PM

*WHERE:
We're expecting large crowds, and suggest using satellite parking at Paramount's Great America
<http://maps.yahoo.com/py/ddResults.py?&newcountry=us&newtcountry=us&fuz=&tuz=&im=&Ed=0vWxbOp_0To4eajmeP1cpOOxYvfw3ehP6Fd.9TzPadpYQtii3raih9Q13ceW5EZj2I4whGt9EcSrbJyK_J0Xc.7emaXdLyxjWfokR7tL2B0o1udJHqSPYa80MO8bSw--&tarcsz=Santa+Clara,+CA>.

A FREE Shuttle to the TiVo HQ will run between the Paramount's Great America parking lot and TiVo HQ from 10-3.

Directions <http://www.tivo.com/5.9.3.asp> to the TiVo headquarters in Alviso.

Ben said:
>
> What freq does digital cable run on?

AFAIK, it doesn't. It's a signal sent on cable lines, much like a telephone signal.

I despise Comcast. Every week, I get 2 or more of their full color advertisements. The last company I worked at had 2 'suites', Unit 8 & 9. "8" was nothing - just some employees. We never gave out Unit 8 as an address. But we got the Comcast junk to it - and to unit 9.

They're wasting trees and creating a landfill.

Im not really clear on this message but my understanding with Comcast's TIVO machine is that the unit is ALWAYS free since you are actually leasing it from them.
You pay the $10 a month for the service however, I pay $14 a month for my TIVO but it really is mine.

This is right from the comcast site:

DVR is currently available in limited service areas but will soon be available to most Comcast customers. DVR requires subscription to Comcast Digital Cable. Equipment is required. DVR recording capacity is limited. ON DEMAND and Music Choice channels cannot be recorded. Upon service termination, all Comcast-provided equipment must be returned to Comcast in good condition. Installation charges are additional. Call your local Comcast office for restrictions and complete details about service, prices, and equipment. Service is subject to terms and conditions of Comcast Cable Subscriber Agreement.

I know this is OT but I had to say I completely agree with you Evan. Comcast is an out-of-hand monopoly in my opinion.

For those who have a clean shot at the satellite the dish network's http://www.dishnetwork.com/ $35.00 channel lineup package puts Comcast in weed's. I just had the 29.99 package setup for my Mom in Petaluma and she dumped Comcast.

> What freq does digital cable run on?

AFAIK, it doesn't. It's a signal sent on cable lines, much like a telephone signal.

I despise Comcast. Every week, I get 2 or more of their full color advertisements. The last company I worked at had 2 'suites', Unit 8 & 9. "8" was nothing - just some employees. We never gave out Unit 8 as an address. But we got the Comcast junk to it - and to unit 9.

They're wasting trees and creating a landfill.

Also OT, but a LOT of people in San Francisco have no option, alot of landlords will not allow a (dish)ant in a clear area, or your window faces the wrong way.
thus, stuck with comcast.

Im not sure if anyone was aware of this but tonight there is a big DUI check point running in San Rafael with other departments from the surrounding area assisting.
Anyway I heard on the main San Rafael talk group that they were going to be using "tac 8" as he put it. No listing I had showed this talk group even listed correctly which was 62832.
I dont even see any talk groups starting as high as 6 in the MERA system.
They are talking now and Im recording it.

Hey thanks for the heads up Dave....I was just heading to Safeway to get more beer...er, I mean Milk. :-) I do not have this TG on my master MERA list but will add it now....I also just got my 296 back from Uniden today. :-)

Hey Dave, did you catch the fire at your apartment complex this week? I could see the SRFD department on your roof trying to track down where the smoke was coming from.in one of the units...it sounded like they were tearing up some sheetrock chasing electrical smoke (SRFD Tac Green 46.56) and then they also called PG&E out to investigate.

From: AC6JA@AOL.COM
Topic: 34871 Message: 34871

Am looking to get a digital scanner to listen to the new digital San Mateo
County trunking system and am wondering which one is the best to get.
I've heard some reports of the 796 making funny noises while in digital mode?
I know that radio shack also has a digital scanner.
Any info on which direction to go would be greatly appreciated.
Thanks!

Mike

The Official PRO-96 BC296D comparison thread
http://www.radioreference.com/modules.php?
name=Forums&file=viewtopic&t=12413

So I've copied the first post, you can follow the thread from there.

I have a Pro-96. For me the two biggest features were the
automatic/adaptic digital quality control. The Uniden has 'knobs'
that need to be tweaked on a per-system basis. If you travel and/or
listen a bunch of different systems, this is a plus.

The other big feature is the V-Scanner/V-Folder. You can store up to
10 virtual radio configurations and load them into the radio without
an external computer. It really makes it easy to have detailed
geographical configurations. No more 'compromise' configs so you can
pack everything in.

My biggest disapointment is lack of LTR trunking, and lack of I-Calls.

The 3rd party software for the Pro-96 is very well done. It also
enables some features of the radio, such as milair. Unfortunately
the milair performance isn't so great.

Features of the BC296D, (that the Pro-96 DOES NOT HAVE or are better
in the BC296D): (Original list by Kikito - corrected by Voyager)

-- Longer alpha-tags (16 vs 12)
-- LTR trunking (except Passport and MultiNet)
-- EDACS Narrowband trunking (Except ProVoice on any EDACS system)
-- EDACS SCAT trunking
-- EDACS Blockout feature
-- EDACS Emergency ID feature
-- I-Calls (on 3600 systems ONLY)
-- Patch Tracking
-- Status Bit option (on or off)
-- End Code option (detect or ignore)
-- Activity ID option (on or off)
-- Lockout Talkgroups without taking away available ID channels
-- Up to three Base/Offset ranges for VHF/UHF through the keypad
-- More custom search ranges (10 vs 1)
-- More pre-programmed searches
-- Data Skip option
-- More priority channels (10 vs 1)
-- Selectable frequency step sizes (Auto, 5, 6.25, 7.5, 10, 12.5, 25,
50 and 100kHz)

-- More frequency modes (supports SNFM and WFM)
-- Screen Mask feature
-- Auto Store during a search
-- Beep Alert for desired frequencies or talkgroups
-- Faster scanning and searching rate (theoretically 100 ch/sec vs 60 ch/sec)
-- Priority Plus option (Scans only priority channels)
-- More channels per bank (100 vs 50) or more total channels (1000 vs 500) of immediate use (meaning without having to load from memory or computer program)
-- Computer Control (Not just programming)
-- Reverse Frequency button (Repeater input)
-- Lockout specific CTCSS/DCS during scanning or searching
-- PC Cable included
-- Power supply included
-- Battery pack included (Although proprietary)

Features of the Pro-96, (that the BC296D DOES NOT have or are better in Pro-96):

-- Control Channel information (SysId, etc.)
-- More trunked delay options (None, 0.5, 1.0, 1.5, 2.0, 2.5, 3.0, 3.5 & 4.0)
-- Better audio
-- Better screen and keypad backlighting
-- More backlight functions and delays
-- Bigger screen fonts
-- Uses regular AA batteries
-- Upgradeable DSP firmware
-- Better and faster CTCSS/DCS decoding (Including Subaudible Squelch Tail Elimination turn-off codes)
-- Digital AGC
-- Automatic digital signal adjustment/tuning (Intelligent Adaptive Digital Tracking)
-- V-Scanner Folders feature (Virtually 11 scanners-in-one or 5500 channels total)
-- Control Channel only on VHF trunked systems (Although there's a way to do it on the BC296D)
-- Quick access TUNE function
-- Excellent software (Win96 by Don Starr)
-- You can Scan a trunked system in a bank and Search another one in a different bank, unlike the BC296D that limits you to Scan or Search all your trunked sytems
-- Up to 150 Talkgroups ID's per bank
-- Battery Low threshold adjustable (Through software)
-- Changeable Welcome Screen text
-- Able to review lockout frequencies
-- Up to six Base/Offset ranges for VHF/UHF trunked systems through software (Only one through the keypad)
-- Skips over encrypted transmissions (Only on 3600 systems and when both sides are using it)

The Pro-96 is not a good scanner for computer control. You can program it, but not control it. That said, I went for the pro-96 versus the 796, mostly because of the crappy uniden sound quality, not to mention that stupid battery pack.

If you are going to use computer control, I'd suggest getting a mobile /base-unit versus portable scanner.

Assuming you are going on 58, you can scan Edwards AFB
http://www.lazygranch.com/edtrunk.htm

I've done the bay area to Vegas trip more than a few times. In the winter, Tehachapi can be icy. I suggest heading to the Grapevine, then cutting west on 138, then north on 14 and then back on 58 west. It is longer but sometimes faster, especially if Bakersfield is jammed.

It doesn't hurt to check road conditions either. The CHP has been known to shut down I15 in the winter.

the Southwestern book has vegas freqs , including not just fire/police but casinos as well. I haven't seen the Southern Cal version but if its anything like the S/W version , I am sure its super. They aren't cheap , about 29.95 each , but very, very good.

Garys' suggestion re: the route you take is good. If you have a laptop , good to check on the CHP website or call them prior to you exact trip , the grapevine when hit by a winterstorm can be bad too. If you've never listened to Phoenix Fire, its a great set-up , then dispatch for something like 19 different fire depts.

It's Neil Boortz, aka "Mr. I'm in radio even though I swallow my "g"'s." [Then again, the standards are pretty low for ring wing talk shows.] I've heard him when driving south on I5. I didn't need the translation.

This is the phone number for info
1-800-427-ROAD (7623)
It's uses a voice recognition system that works quite well.

The border patrol in Arizona is pretty interesting. I've heard it via
streaming audio (site down at the moment).

Thanks for the replies on Computer Control of the Pro-96.
A friend has one and he likes it but I was listening to it today in Downtown SF listening to PD & FD and it was so much static that most of the traffic you couldn't understand what they were saying.

And yes I know all to well about Uniden, I have just about everything they made in the last 6 years but that new H/T that they just came out with and I like my unidens (may be not the 245 much) but the 780,785D,796D ,245,250D & 296D are my backbone to what I do (which is a lot of Bravo Sierra)

Don't know what the problem is. I have a Pro-96 and listen to SJ and don't have any problems like you describe.

Maybe antenna problems?

Dec 18, 2004 - BCN21:HIKER FIND EXPLOSIVES ON MARIN COUNTY TRAIL

BCN21 -ADVISORY

A hiker on a trail near Castlerock Drive in Marin County this
afternoon found explosives with military writing on them, said a spokesman
for the Marin County Sheriff's Department.
The explosives were reported to the sheriff's office who responded
to the trail around 1 p.m. along with a UC Berkeley bomb squad, said
spokesman Mike Crain.
The bomb squad determined that the explosives were too unstable to
move and decided to detonate them where they lay, said Crain.
Residents in the immediate area voluntarily evacuated, said Crain.
The bomb squad planned to detonate the explosives around 5 p.m.
but were delayed. It is unclear when the explosives will be detonated, said
Crain.

I have just the opposite opinion. My Pro-96 picks up Oakland (just barely) where my bc245 doesn't even break squelch, let alone track the system.

I'll plead ignorance to what you were scanning in San Francisco, since they don't use edacs. I guess you were trying to scan Oakland from SF?

Just heard them say something on Control 2 (39.520) on the old Marin system
that there was going to be an explosion followed by another one around 2
minutes after the first.

I assume this is what they are talking about. I should hear it from my spot
in the headlands in Marin.

34901. Re: Pro-96

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-12-19 05:36:36 UTC
From: gariac450
Topic: 34888 Message: 34901

The bart system is directional. It's really not a good test unless you
are near the tracks. In the city, I believe they use radiax in the
underground facilities.

34902. Code 33 on Solano SO

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-12-19 05:42:58 UTC
From: stfucode3
Topic: 34902 Message: 34902

Not sure why.. Code 33 on 155.4900. I hear units responding to
advised to come from the north as to not be in the cross fire.
sounds like a search.

34905. New unit designations for San Mateo PD

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-12-19 14:14:39 UTC
From: Norman Worthington
Topic: 34905 Message: 34905

Greetings all --

Last night I started hearing Alpha units as well as Sam and Lincoln (more than the usual Sgt. and Lt.) being dispatched on calls. Is this temporary or are they replacing the old Adam, Boy, Charlie etc. beats?

Thanks for any insight!

Cheers and Happy Holidays!

Norm

34906. Re: [bayscan] New unit designations for San Mateo PD

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-12-19 14:19:50 UTC
From: caladded@aol.com
Topic: 34905 Message: 34906

Might have to do with the heavy DUI enforcement . Lots of PDs taking part in it. SMPD will certainly be part of the AVOID the 23 program in the county.

note: Lots of units last night on the GREEN 99XX units doing this all over the county , expect more tonight and the next 2 weekends.

Date: 2004-12-19 22:21:44 UTC
From: Roger Strohmeyer
Topic: 34909 Message: 34909

Hi again all,

Does anybody here in the North Bay know what radio system Marin Community Colleges PD (College of Marin, Indian Valley) is on running these days?

A few months back they were on MERA TG 51280 but have since disappeared....I'm assuming they may have gone back to analog\conventional. Can someone please confirm? I'll also do some digging of my own...

Thanks,

-Roger

Subject: [bayscan] Ok More BC796D help

Ok.. SO I have tried entering freq mannul and via the uniden software. Everythings works great except one thing.. When I enter in only certin freq, such as 488.9375, it automaticly rounds up to 488.9400 when I hit enter. It's not the software because like I said it does it on the scanner it self mannualy. Is there a setting to turn of rounding up. Has anyone else had this problem? When it rounds up, I obviously do not get the correct info and there fore do not recieve any transmissions =\ .

Thanks

From: Roger Strohmeyer
Topic: 34832 Message: 34913

Hey Bayard,

The step size is done in the 1&2 base config's under "offset". There's other ways to change this also I believe...good luck.

-Roger

1. Turning on the Trunking Feature:
1.) Menu button
2.) Scan Option
3.) Trunk
4.) Trunk Type
5.) On
6.) Type2/P25 UHF
7.) It's going to ask you about Base Config & you need to enter the following info:
1 2
Base: 482.0000 488.0000
Offset: 12.5 12.5
Spacing: 380 570

8.) There is only two sets of configurations, so just leave the third blank.

2. Programming the trunked frequencies properly:
1.) Menu button
2.) Scan Option
3.) Trunk
4.) Trunk Channel
5.) Frequency (this is where you want to re-enter all the frequencies & not where you originally entered them as conventional frequencies.)
6.) Hint when prompted to enter an alpha tag for this frequency, don't just leave it blank. The place you'll want to enter the alpha tag later will be on the specific talk group.
Site Description Freqs
001 East Zone 482.3500 482.6250 482.6500 482.7875 482.9375 483.0250* 483.1250* 488.7000* 489.0750*
002 West Zone 482.9750 483.0500 483.1500* 488.4250* 488.8500* 489.1000*
101 Sonoma Mtn IR 482.3250 488.4000 488.4750 488.7250 488.8750
102 Bolinas Fire Sta IR 482.6250 482.7875 483.0250 488.4750 489.0750
103 Bodega Bay IR 482.3500 482.6500 482.9375 483.1250 489.0750

7.) You'll know when you have programmed the frequencies in right, because instead of seeing a "C" for Conventional next to every frequencies,

you'll see a "M" next to each frequency which signifies that you have
properly programmed a Motorola Trunked frequency in.

3. Programming the talk groups:
1.) Menu button
2.) Scan Option
3.) Trunk
4.) Talk Group
5.) Select the proper group to correlate with bank that you have all the
frequencies stored.
6.) Now you will store the 4 or 5 digit numbers know as the Decimal or
DEC number that you were asking about earlier.

Ok.. SO I have tried entering freq mannul and via the uniden
software. Everythings works great except one thing.. When I enter in
only certin freq, such as 488.9375, it automaticly rounds up to
488.9400 when I hit enter. It's not the software because like I said
it does it on the scanner it self mannualy. Is there a setting to
turn of rounding up. Has anyone else had this problem? When it
rounds up, I obviously do not get the correct info and there fore do
not recieve any transmissions =\ .

Thanks

Subject: RE: [bayscan] Ok More BC796D help

Hey Bayard,

The step size is done in the 1&2 base config's under "offset". There's other ways to change this also I believe...good luck.

-Roger

1. Turning on the Trunking Feature:
1.) Menu button
2.) Scan Option
3.) Trunk
4.) Trunk Type
5.) On
6.) Type2/P25 UHF
7.) It's going to ask you about Base Config & you need to enter the following info:
1 2
Base: 482.0000 488.0000
Offset: 12.5 12.5
Spacing: 380 570

8.) There is only two sets of configurations, so just leave the third blank.

2. Programming the trunked frequencies properly:
1.) Menu button
2.) Scan Option
3.) Trunk
4.) Trunk Channel
5.) Frequency (this is where you want to re-enter all the frequencies & not where you originally entered them as conventional frequencies.)
6.) Hint when prompted to enter an alpha tag for this frequency, don't just leave it blank. The place you'll want to enter the alpha tag later will be on the specific talk group.
Site Description Freqs
001 East Zone 482.3500 482.6250 482.6500 482.7875 482.9375 483.0250* 483.1250* 488.7000* 489.0750*
002 West Zone 482.9750 483.0500 483.1500* 488.4250* 488.8500* 489.1000*

101 Sonoma Mtn IR 482.3250 488.4000 488.4750 488.7250 488.8750
102 Bolinas Fire Sta IR 482.6250 482.7875 483.0250 488.4750
489.0750
103 Bodega Bay IR 482.3500 482.6500 482.9375 483.1250 489.0750

7.) You'll know when you have programmed the frequencies in right,
because instead of seeing a "C" for Conventional next to every frequencies,
you'll see a "M" next to each frequency which signifies that you have
properly programmed a Motorola Trunked frequency in.

3. Programming the talk groups:
1.) Menu button
2.) Scan Option
3.) Trunk
4.) Talk Group
5.) Select the proper group to correlate with bank that you have all the
frequencies stored.
6.) Now you will store the 4 or 5 digit numbers know as the Decimal or
DEC number that you were asking about earlier.

34918. San Fran TRS / SFPD Talkgroups Questions (Maybe Ed can help :-))

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-12-20 05:01:57 UTC
From: inigo4688
Topic: 34918 Message: 34918

I got to listen to San Francisco's TRS for the first time within the last two days, and I had a few questions (most of them were answered because I searched through like 5,000 SFPD TG posts already, mostly answered by Ed, who seems to be an allmighty guru of the SF system <G>). I was hoping someone could help me out with these though:

1.) For SFPD A1-A8, I was just wondering what the "Service" talkgroups were and how service differs from normal dispatch? I'm intrigued because almost all the PD traffic I heard was on service (mostly routine traffic like 10-8, but also car-car calls and in depth conversations with the dispatcher that would be on a Tactical channel in other agencies, where in contrast I didn't hear a peep on any of the TACs the entire time I was there). Could somebody fill me in on how SFPD uses this channel structure, and in what situations officers would use them?

2.) Generally, what kind of traffic do A9, A10 & A12 see? What is A11 used for? (One list I have says PAT Muni TAC, another says Traffic Control, so I'm not sure.) Finally, I was curious what the A13 and A14 Station Service TGs are used for.

3.) I was just curious what frequencies the Muni busses use? On the same topic, could someone tell me what frequencies the BART trains (or the MUNI trains one level up below Market St) use in SF? I know you can't really get the control channel for BART's EDACS system when you're downtown, and I have a feeling SF MUNI trains use something different.

4.) Last question, I promise. What agencies use the secondary site of the SF TRS? (With the Control Channels: 856.2375, 857.2375, 858.2375). I threw it in another bank and from what I can tell, it seems like a completely different system, with random TGs un-associated with the primary SF TRS site. I heard a bunch of staticy talkgroups, plus a few more that sounded like open mics or just telemetry. Is this where MUNI is? I also didn't hear any of the Parks/Water TGs on the primary system today, are they on this secondary one as well?

Just really curious because I live in Marin, but my mom's working down in the financial district now so San Francisco's whole system is completely new and foreign to me, and its law enforcement talkgroups have been much more interesting than anything I've heard elsewhere so far. Thanks in advance to all you guys who know. :)

-Inigo

3.) I was just curious what frequencies the Muni busses use? On the
same topic, could someone tell me what frequencies the BART trains
(or the MUNI trains one level up below Market St) use in SF? I know
you can't really get the control channel for BART's EDACS system when
you're downtown, and I have a feeling SF MUNI trains use something
different.
]

Muni is on a T-Band UHF and did not buy into the TYPE II system. starts somewhare around 488.XXX

BART is on an EDACS system like Oakland Ca.

4.) Last question, I promise. What agencies use the secondary site of
the SF TRS? (With the Control Channels: 856.2375, 857.2375,
858.2375). I threw it in another bank and from what I can tell, it
seems like a completely different system, with random TGs un-

talkgroups, plus a few more that sounded like open mics or just
telemetry. Is this where MUNI is? I also didn't hear any of the
Parks/Water TGs on the primary system today, are they on this
secondary one as well?

SF-DPW and no you won't hear Muni on here.

2.) Generally, what kind of traffic do A9, A10 & A12 see? What is A11
used for? (One list I have says PAT Muni TAC, another says Traffic
Control, so I'm not sure.) Finally, I was curious what the A13 and
A14 Station Service TGs are used for.

A-11 is use to warrant & Dl's checks, A-16 is the Tow Desk.
I don't hear much on PD A-13,A-14.

If your are downtown I would listen to A-1 & A-2 (T.L Task Force, Southern & Central Stations for PD and A- thru A-4 for the fire)

I have found that the ODD number A channels (A-1, A-3, A-5, A-7) is more station to car and the even numbers are more Dispatch to the District's, BUT I don't do a lot of PD listening I listen to SFFD and the B-Bank of PD and that were I find the stuff I like (U.C. work, Robbery Team and other stuff)

Hi all,

I'm trying to program my 296 so I can monitor Chevron Refinery's trunking sytem in Richmond. Questions:

What trunking type do I use? Motorola type 2 UHF? Also, which band plan do I use or do I use a custom band plan? And one more question is that I also monitor MERA on my 296...can I monitor multilple trunking systems whether digital or conventional?

Thanks a bunch...

"Robert W. Sanford" <bayscan@...> wrote:I know just about everyone on the list will find this interesting. I signed
up for it a few days ago and have not received on alert yet so we will
see. The link is posted below the information on it.

Enjoy,

Robert
BayScan

The Secure Cops Alert Network

The Secure Cops Alert Network, or "SCAN" is designed to be the first national alert system that allows local police departments and public safety agencies to broadcast emergency information directly to the computers, mobile phones, pagers and PDAs of their neighborhood and local residents. Through SCAN, residents can now receive immediate alerts for neighborhood crime, sexual predators moving into neighborhoods, weather, natural disasters, cyber attacks, fire advisories, health emergencies, Amber alerts, local acts of terrorism as well as neighborhood public safety information.

The events of September 11, 2001 have created heightened community awareness about the importance of localized emergency information programs. Public funds are not available to support expanding the local programs that are needed for increased community security. Using cutting-edge technology, SCAN has created a way for public safety agencies to communicate directly with the citizens they protect.

SCAN is free of charge to all public safety agencies. It is provided free of charge to the public for the first year. There is a minimal charge of $2/month in year two.

SCAN is presented to California residents by the California Organization of Police and Sheriffs, or "COPS." As a non-profit organization formed for the benefit of law enforcement officers and their families, COPS has been widely recognized and supported by law enforcement, government agencies and the general public for its efforts in public safety.

BROADCASTING ALERTS
SCAN broadcasts alerts on computers and wireless devices such as cell phones, pagers and PDAs.
Simply download SCAN from the Internet or from a SCAN installation CD. SCAN maintains a twenty-four hour, seven-day service and support bureau that collects data, assesses risk and broadcasts alerts throughout the system.

Rodger

It is a Motorola 800MHz type II, I'm not sure what plan to use, since I enter in all the frequencies. Pretty boring, but the Richmond FD is simulcast on this system and I do monitor it from my Hayward location. Wish I could get Richmond PD on the EDACS, but just can't quite pull it in.

Yes to your question about monitoring both digital and conventional on the 296.

34929. RE: [bayscan] Re: ChevronTexaco trunking system questions

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-12-21 02:50:32 UTC
From: Roger Strohmeyer
Topic: 34925 Message: 34929

Thanks to both Chris and Vince for your responses. A major DUH here as I just figured out what was wrong. I drove up the hill here just over Puerto Suello hill at the top of Lincoln Ave and low and behold my 296 immediately started hearing the Chevron trunking system. Pretty slick how their trunking systems TG's are already marked such as CHEVRON OPS rather than having to be manually entered on systems such as MERA.

As I've mentioned in the past my antenna and location are poor at best. I have a Rat Shack magnetic antenna that I have stuck on a heater vent...what I really need from Santa is a Diamond Discone and some height. :-)

Thanks again,

-Roger

34934. Story on Explosives found in Marin last week

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-12-21 20:59:13 UTC
From: Robert W. Sanford
Topic: 34934 Message: 34934

This story was in the Marin Independent Journal today regarding the explosives found in Marin last week:

Neighbors don't fear explosives
By Tad Whitaker
IJ reporter

Tuesday, December 21, 2004 - Cache found near homes in Homestead Valley area

Life in Homestead Valley is returning to normal this week as authorities continue to investigate a cache of explosives discovered by a hiker and detonated over the weekend.

Marin County sheriff's Sgt. Mike Crain said yesterday investigators have filed reports with the Bureau of Alcohol, Tobacco and Firearms as a matter of procedure and in an attempt to draw a final conclusion about the origin of the explosives that were found off Castlerock Drive, in an unincorporated area of Mill Valley.

The Department of Homeland Security was also briefed about Saturday night's explosions, which left a 10-by-4-foot crater.

"They just wanted some general information and to find out who detonated it," Crain said.

Castlerock Drive resident Matt Galland, 39, said he and his family hike in the area a couple times every month and this weekend's excitement won't put an end to that.

"It's nothing to lose sleep over," said Galland, president of the Castlerock Home Owners Association.

More than 30 families in the area west of downtown Mill Valley were evacuated after a hiker found the explosives at about 1 p.m. Saturday just off a trail about 100 feet from the home at 64 Castlerock Drive. The explosive, tetrytol, was contained in several rusty military-style ammunition boxes.

Officials called in the University of California at Berkeley bomb squad and it was determined that the explosives were too unstable to move. Bomb squad experts found multiple boxes of the explosives over several hours, causing several delays before they were finally able to blow up the hazardous material with several detonations late Saturday night.

The blasts blew in at least one window at 64 Castlerock Drive.

"Everyone in the valley heard it," Galland said.

Galland said the trail near where the cache was found is popular with people in the neighborhood and he has conducted Easter egg hunts there for his children.

He said he's walked by there too many times to count but doubted this weekend's discovery would deter anyone from going up there. He said the area is rife with poison oak and, even though the explosives were just a few feet uphill from the trail, they weren't in a spot where many people would venture.

"My hunch is it would have laid dormant there for another 20 years," he said.

Don Johnson, 70, snuck around authorities to get back to his home at 51 Castlerock Drive so he could pick up his dog and shut the blinds across the big bay windows on the back of his house that faced the detonation zone. He said the blasts didn't do much damage, but they knocked down a blind as well as some artwork.

"More than any earthquake," he said.

Rather than wait around, Johnson said he and his wife went to dinner and a movie. When they got out someone with the Marin County Sheriff's Office had called their cell phone to let them know it was safe to return home.

This weekend's discovery comes less than a month after a hiker discovered a World War II bazooka shell near Bon Tempe Reservoir outside Fairfax. Officials from Travis Air Force Base who were called in declared the shell to be an inert practice rocket and took it with them.

Buried ordnance surfaces from time to time in Marin, which has dormant forts and military sites scattered throughout the area. Officials have said there are more than 200 sites in California where the military has tested, stored, burned or buried armaments.

Another shell was found outside Fairfax a couple years earlier when firefighters were conducting a controlled burn.

In 1999, a kayaker found three live World War II-era shells on a beach in the Marin Headlands. The 8-inch shells were found partially buried at Kirby Cove near the Golden Gate Bridge.

I sure needed the translation. I assume you're bashing "right" wing radio. Mr. Boortz may "swallow his "G's" but this woman swallowed entire words. Maybe left wing radio listeners already understand street talk but I'll bet 80% of Americans couldn't understand what she was trying to say.

I pick up BART perfectly from Petaluma using a Pro-96 and a discone antenna. They sound just fine up here, as does Richmond, Alameda, Oakland, GGNRA, and MERA. The only system I can't get is SF because of their weird lobe pattern and I suspect a Bearcat wouldn't get them either. I don't believe there's any significant difference between a Bearcat digital scanner and a Pro-96 in regards to receiveing trunk systems and the digital sytems work much better. I just came back from a trip to St. George Utah and had five virtual scanners for different parts of the trip. I was able to switch to different areas with just a few key punches. That alone is enough to convince me the Pro-96 is a better deal if you ever do any traveling.

Regards, Jim

Topic: 34937 Message: 34942

Interesting set of photos though I couldn't find it immediately on firehouse.com but eventually here, http://cms.firehouse.com/content/article/article.jsp?sectionId=45&id=37645

There is one photo with a firefighter and hose, he is standing firmly with the water roaring out the nozzle, very dramatic.

I believe this list discussed this incident last week. One of the paragraphs:
"A second alarm was called shortly after the arrival of first alarm units due to difficult access conditions created by the homeowner filling the structure, in some cases, from floor to ceiling with garbage. According to firefighters that battled the blaze the entire structure, including the attic had been crammed full of refuse. "

Mike

PS: unrelated article: "New EMS Titles Are Coming and They Want Your Input" from the article, "...at least 44 different levels of EMS provider certifications in the United States.... As an example, in one state as an EMT, you may be allowed to defibrillate with an AED, but in another state, you may be not allowed to defibrillate with an AED as an EMT."

34953. OT: funeral for alco deputy

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-12-23 04:52:22 UTC
From: nina zhito
Topic: 34953 Message: 34953

...baycitynews advises that funeral services have been scheduled next week for an alco sheriff's deputy who drowned last friday.

san lorenzo resident thomas w. hoggs, lll, 43, had traveled to hawaii to attend his stepdaughter's college graduation, and was trapped while swimming in a rip current off oahu's sunset beach. hoggs, who joined the s.o. in may of 1997, was stationed at the sheriff's office on foothill boulevard in oakland, according to dept. spokesman lt. jim knudsen. hoggs is survived by his wife, two sons, and his stepdaughter. services will be held at 11 am on 12/27, at the church of jesus christ latter day saints at 859 grant ave. in san leandro...

34961. 2-m repeaters along 101, SF to LA ?

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-12-23 21:23:29 UTC
From: Harry Marnell
Topic: 34961 Message: 34961

At almost the last minute, he begs:
I normally take I-5 to & from So Cal from Humboldt, but may use US 101 this time, one way at least.

Anyone have a list or a URL for some wide-coverage (or otherwise good) 2-meter repeaters along the way, particularly south of San Francisco? I also have a 440 rig, but it's a wimpy handheld, and would be useful only in strong signal areas.

Thanks.

Harry

News Story On Pursuit

A pursuit by the California Highway Patrol led to a crash
involving a CHP patrol car in Palo Alto this afternoon, the CHP reports.
Around 4 p.m. a CHP officer pulled over a black 2004 Chevrolet
Corvette driven by a man described as an African American male on southbound
U.S. Highway 101 just north of San Antonio Road, reports the CHP.
After talking with the officer the driver fled the scene in the
Corvette at a high rate of speed, according to the CHP, and the officer
began
pursuing the car.
The Corvette continued south on Highway 101 until it exited at San
Antonio Road and onto city streets at which point Palo Alto police were
contacted, reports the CHP.
Before police could enter the pursuit the Corvette got back on
Highway 101 northbound at a high rate of speed, according to the CHP.
The officer tried to position the patrol car to stop the Corvette
but collided with a white Ford truck and then into a Jeep Cherokee, the CHP
reports.
The Corvette continued on at high rate of speed and was seen by
witnesses weaving in and out of traffic at speed up to 100 mph, the CHP
reports, and the officer ended the pursuit to help those involved in the
collision.
A small fire that started underneath the patrol car was quickly
extinguished and the CHP reports no injuries in the collision.
The driver of the Corvette is still at large.

Is this the incident at Camp Parks?

Posted on Thu, Dec. 23, 2004

Dublin street closed, but no bomb

Authorities shut down a small section of Dublin Boulevard for three hours Wednesday night while they searched a suspicious car at the Camp Parks' entrance.

About 9 p.m. a cab driver, who has been on the base before, pulled into a base entrance while driving a cab he didn't normally drive. The guard asked to see the registration of the car and found something was wrong with it, said Don Sundius, spokesman for Camp Parks.

"Everything didn't match up," Sundius said.

Camp Parks police did a full search of the vehicle, and a bomb-sniffing dog picked up a scent in the car, Sundius said. Vehicle searches are normal, especially if there is reason to believe the car may be stolen.

The car was driven into a "safe zone" inside the base, and searched again, Sundius said. Dublin Boulevard in front of the base closed during that search.

The dog did not pick up a scent, the second time it searched the car, Sundius said no explosive device was found, Sundius said.

The street, closed between Scarlett Drive and Iron Horse Parkway, reopened about midnight, when the search was complete.

Hey, I saw a black Corvette traveling very erratically around this time. He stopped abruptly in a multi-lane road to make a turn at an intersection; he caused ~everyone~ to stop and wait for him. Maybe this was it.

> The officer...collided with a white Ford truck.

I was driving a white Ford truck. But this wasn't me. Or I don't think it was. Hey, where'd that damage on my truck come from...? ;-)

From: Mike Wright
Topic: 34965 Message: 34985

It appears San Jose PD is using SJ9 in place of SJ2 (repeater problems?)
SJ2: 460.275 tone 162.2
SJ9: 460.100 tone 136.5

Would anyone know what channel SJ is now using for DUI checkpoints? SJ9 was used last week.

I did hear some traffic last week on SJ9: Someone with a fake DL (it looked suspicious so the officer ran a check, came back someone completely different in El Segundo). Other traffic is a bunch of people driving the wrong way, one person started and the rest of the sheep followed him so officers had to stop all the cars.

Mike

34988. Code 33 search in North Richmond

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-12-24 21:18:53 UTC
From: inigo4688
Topic: 34988 Message: 34988

Contra Costa Sheriff setting up a perimeter for a black male, 150, wearing a sweatshirt & a baseball cap, code 33. Unkown what the crime was, I just caught on in the middle when I heard the Code 33 tone. Subject last seen on the 1800 block of Giaramita St. between Market & Verde Ave. Sheriff has a perimeter set up on 5th & 6th streets and they're combing people's yards with a canine unit now. Unkown if H-30 is around, I haven't heard him yet. Entertaining listening though.

Coco Sheriff West Dispatch - 155.31

34995. OT: HAM Christmas poem

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-12-25 04:55:57 UTC
From: Roger Strohmeyer
Topic: 34995 Message: 34995

Twas the night before Christmas, And all through two-meters,
Not a signal was keying up, Any repeaters.

The antennas reached up, From the tower, quite high,
To catch the weak signals, That bounced from the sky.

The children, Tech-Pluses, Took their HT's to bed,
And dreamed of the day, They'd be Extras, instead.

Mom put on her headphones, I plugged in the key,
And we tuned 40 meters, For that rare ZK3.

When the meter was pegged by a signal with power.
It smoked a small diode, and, I swear, shook the tower.

Mom yanked off her phones, And with all she could muster
Logged a spot of the signal, On the DX PacketCluster,

While I ran to the window, And peered up at the sky,
To see what could generate, RF that high.

It was way in the distance, But the moon made it gleam -
A flying sleigh, with an Eight element beam,

And a little old driver who looked slightly mean.
So I though for a moment, That it might be Wayne Green.

But no, it was Santa, The Santa of Hams.
On a mission, this Christmas, To clean up the bands.

He circled the tower, Then stopped in his track,
And he slid down the coax, Right into the shack.

While Mom and I hid, Behind stacks of CQ,
This Santa of hamming, Knew just what to do.

He cleared off the shack desk, Of paper and parts,
And filled out all my late QSLs, For a start.

He ran copper braid, Took a steel rod and pounded
It into the earth, till The station was grounded.

He tightened loose fittings, Resoldered connections,
Cranked down modulation, Installed lightning protection.

He neutralized tubes, In my linear amp...
(Never worked right before -- Now it works like a champ).

A new, low-pass filter, Cleaned up the TV,
He corrected the settings, In my TNC.

He repaired the computer, That would not compute,
And he backed up the hard drive, And got it to boot.

Then, he reached really deep, In the bag that he brought,
And he pulled out a big box, "A new rig?" I thought!

"A new Kenwood? An Icom? A Yaesu, for me?!"
(If he thought I'd been bad, it might be QRP!)

Yes! The Ultimate Station! How could I deserve this?
Could it be all those hours, that I worked Public Service?

He hooked it all up, And in record time, quickly
Worked 100 countries, All down on 160.

I should have been happy, It was my call he sent,
But the cards and the postage, Will cost two month's rent!

He made final adjustments, And left a card by the key:
"To Frank, from Santa Claus. Seventy-Three."

Then he grabbed his HT, Looked me straight in the eye,
Punched a code on the pad, And was gone - no good bye.

I ran back to the station, And the pile-up was big,
But a card from St. Nick, Would be worth my new rig.

Oh, too late, for his final came over the air.
It was copied all over. It was heard everywhere.

The Ham's Santa exclaimed What a ham might expect,
"Merry Christmas to all, And to all, good DX

Here's the one we broadcast:
==========
NORTH POLE POLICE DEPARTMENT
125 Snowman Lane
North Pole, Alaska 99705

The North Pole Police Department is seeking information on a possible
459 (burglary) subject last seen in the skies over Southern
California.

VEHICLE: Red with gold trim, older model home-built sleigh
ALASKA (PERSONALIZED) LICENSE PLATE: NOEL 1
CHARACTERISTICS: Pulled by eight (8) tiny reindeer; displaying a
front red light

NAME: Santa Claus
AKA: Saint Nick
SEX: Male
AGE: Old; D.O.B. unknown
WEIGHT: Heavy build
HAIR: White with a full white beard
EYES: Described as "twinkling"
MARKS: Described as being jolly; belly shakes like a bowl full of
jelly
CLOTHING: Subject was last seen wearing all red clothing, a white fur-
line trimmed hat and red fur jacket and pants; also wearing black
high-top boots and a black patent leather belt.

Witnesses saw the subject landing on several roof tops in residential
areas delivering toys to good little boys and girls.

The subject was last seen fleeing the area yelling, "Merry Christmas,
peace on Earth and good will to all"

If you have any information regarding this subject please contact the
North Pole Police Department or your local law enforcement agency.

DO NOT ATTEMPT TO CONTACT OR DETAIN THIS PERSON UNLESS YOU ARE A
SWORN LAW ENFORCEMENT OFFICER

Regards, Jim

That's a good one Roger. Never read that before. Thanks. Man, glad to be home tonight. Is it a full moon or something?? There have been several shootings in Richmond, at least one fatality from a gang banging, a couple of bad crashes, one with a fatality and several serious medical calls. They couldn't air evac one accident victim due to poor visibility, don't know what happened to that person. The world just goes on, Christmas or not.

Santa got me a BC-246T to play with. I have been enjoying it and enjoying the learning process that goes along with the new dynamic banks.

So what did you get?

p.s. Does anyone have any 246 files they'd like to share in the files section?

Thanks, I just wanted to see if there were more. :)

I tried the ALCO profile and it was nice to have as a quick use...

I'm wondering how many more folks are 'holding out' on their
profiles. I have a bunch of p96 profiles that I'll upload in
January. I still want to document them before I upload.

35019. Combining existing trunk systems

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-12-25 20:10:35 UTC
From: Ben
Topic: 35019 Message: 35019

Ok, This thought popped into my head. Wouldn't it be more cost effective for one, and for 2 if everyone wants interoperability why not combine all these little motorola trunk systems that are across Ca into one.. for instance, does livermore/pleasanton really need their own? Would it save money just to throw them on alco's in the first place? Or start combining trunk systems like SAC, alco and S.F. and just put up some more towers to fill in the gaps? Am I missing something? Would having a semi statewide trunk system be that hard of a task?

A second thought, Since we just ended a voting year with so many initiatives. Couldn't someone get enough signatures and put something on the ballot sort of like this? say prop (fill in the blank) The Ca interoperability intiative mandating that all existing Trunk systems needed to be interoperable between each other or combined into 1 System by say 2010?

food for thought

ben,

peninsula asemblyman joe simitian holds a contest each year called "there ought to be a law". contest winners have their bill ideas introduced as legislation by him. at least five ideas have been signed into law that originated this way. for more info simitians's office is (650) 688-6330. he also has a website at www.assembly.ca.gov... this year's deadline has passed tho...

someone can run with it...

pipe dream Ben.....I can see combining Alco and Oakland (IF they
were both moto or both edacs) but can't see combining Sac and SF etc no need.
You have the white freqs. they do need the Conventional 800s they can talk on.
I really don't think we are that far from the interoperability issue being
resolved IF the politicians allow the money to be spent.

The point of it would be for the future, instead of having a trunk system for every podunk city, put everyone on one system. It would save money as well as allow everyone to talk to each other...

Date: 2004-12-26 00:41:10 UTC
From: sh9730
Topic: 35019 Message: 35023

There are many examples of this already in place around the country and in CA. Orange County has a well established system. San Diego County's RCS for example also has just about every PD and FD on the system except for the city of San Diego. There are mutual aid command and tactical TGs assigned for all the different areas of the county, for PD and FDs, for local govmnt users (there are schools, water districts, etc etc. on the system.) As time goes by the agencies are getting better and better at utilizing the protocols these systems offer for interoperability. There are still many times where the system is under utilized (i.e. different agencies involved in a mutual aid incident still end up talking on 15 different talkgroups and not to each other..).

This said, there are a couple of disadvantages to having tooo many agencies on a single system. First, there is the issue of single point of failure. If the San Diego RCS goes down completely we are in big trouble. Now, of course the systems are designed with redundancy and up time protection in place, but many cities just dont trust this..(back to the politics again..). Also, as was experienced during the firestorms down here last year with so many users on a system it became severely overloaded and useless at times.

Yes, these obstacles can be overcome but I believe things are getting better. Im not an expert on the Bay area systems, or politics...but just my 2 cents.

Well, for one, 800 MHz won't work everywhere (it does very poorly in wet forested areas, as CalTrans and State Parks has proven). So one large single system won't do it. On the other hand, the technology now exists to network diverse trunked radio systems, which is starting to take place (which would allow units on, say. San Mateo's UHF trunked system communicate with units on SF's 800 MHz system - as long as they are all within the foot print of their systems).

The state already has a legislatively chartered committee established to develop a plan for a statewide consolidated 'network of networks' to replace the current stand-alone agency systems, and to promote interoperability. The big obstacle to overcome will be the funding of such a network.

One significant earthquake and everything would be useless,
depending on your definition of 'significant'.

Clearly we need to design redundancy and resiliancy in these
systems. The SD issue shows me that the system wasn't well thought
out...

San Diego lost ONE major tower site due to fire. Apparently that was
significant enough
to cascade their system. Google for the after-action reports if you are
interested.

The analog systems such as CHP and VHF fire continued to function. ONly
problem
is the FCC can't refarm spectrum to make $$$$ from auction sales if
everybody stayed wideband and
analog.

No argument that it wasn't a well thought out design. I haven't seen a trunked
system yet that is well thought out, and I've seen a LOT of systems since
the first
days of trunking. Most are designed by the sales rep. One very decent
system is
Southern California Edison. Thankfully this is changing with the regional
systems, where
most employ a qualified Rf consultant to review/amend the designs.
(reference the
proposed Oklahoma regional 700 trunked system).

Most also have a central "single point of failure" in the central control
computer, which
isn't redundant (or geographically separate) in a LOT of systems.

My business customers would get sued if they used the same rational for
their business continuity planning.

And no, I am NOT a fan of trunking in it's current incarnation.

Look at San Jose PD. They steal the conventional frequencies as the fools around them go trunked. So trunking is good for some people.

From: Rob Mages
Topic: 35033 Message: 35033

While my wife did her post-Christmas sale thing at
Bayfair Mall (San Leandro), I visited Radio Shack
to see what was on sale. The rack of 5 PRO-83's had
the price removed, so I asked the Manager (whoever was
in charge) if they were on sale. He told me that
they just went off sale. I told him that I was hoping
to pick one up at the introductory price of $59.00.

He wouldn't sell me one at that price..he gave me the
cheapest 30 day price of $55.00 !!! He said he'd give
me a rain check.

If you are in the area around San Leandro, Cooley stop
in and see if he may sell one to you.

The store is not in the mall, it's outside opposite
Target.

And to add to the mix here I know for a fact that Marin will be holding on to it's conventional frequencies and conventional radio equipment for a long time to come rather than completely switching to digital MERA. I have a memo from a fire chief in west Marin that outlines "Multiple low band channels for alerting system" (paging system). It looks they are going to take the Marin County Fire paging system and revamp it on conventional, then patch it into MERA.

I imagine with all of the left over conventional 2-way radio equipment that MERA produces as everyone switches over should allow the county to put together a pretty decent conventional system for minimal $$.

Something my Dad has always mentioned to me with systems such as MERA is that they rely on precise microwave lineup if I'm not mistaken so what happens if a good size earthquake hits and knocks one microwave dish out of alignment?

Unless you are taking convention frequencies and converting them to a trunk system, the FCC makes the organization give back the conventional frequencies. Santa Clara and Fremont certainly did this. I don't see how Marin can keep their old frequencies.

Maybe Ed T. can chime in.

Not a totally true statement.
In the case of the 800 MHz systems, both Regional Planning Committees in
CA incorporated the "give-up" requirement into the FCC-approved plans.
But no such requirement exists for the San Mateo or Marin UHF systems.

Sac County (metro fire) and Sac city fire both kept their vhf freqs (153.89 and 154.19) and Santa Clara City Fire kept 153.965 and 153.44 , so they don't have give them up.

As Don wrote, it all has to do with the decisions of the RPC's. Sonoma had to give back all of our 39 mHz frequencies when we went to UHF. OTOH, we able to pick some additional 45 mHz frequencies for our Park Rangers. I guess it all depends on what freqencies are available and what a county or city wants to use them for.

Regards, Jim

It depends on the system and how much redundancy is built-in. All of our UHF communications goes to mountain top repeaters through both microwave and landline. If an earthquake disrupts the position of the microwave, we have the landline as backup. If the landline also goes down, which is probably a good bet in an earthquake, we have two backup repeaters that run on generators, one on Sonoma Mountain and one on Mt. Jackson. The antennas mounted on the S.O. main office can hit these repeaters (assuming the tower on the roof doesn't come down) so we can still cover about 80% of the county. If all else fails, we have two command posts we can position to give the best coverage to work simplex as a last resort.

No matter how good the system, when the big one hits, there will have to be a lot of improvising to maintain any sort of communications.

Regards, Jim

Most public safety towers and vaults have to meet the state's Essential Facilities Act standards, enacted in the 1980s, which requires operational survivability to a M7+ quake standard. Many of the public safety microwave systems are designed as 'loop' or 'mesh' networks, so that a single path loss will not kill the system. Also, historically, the public safety microwave systems have survived California's major quakes of the last 25 years without a major outage.

In the 1989 Loma Prieta quake, the two recorded outages in the State system were caused by an errant equipment cart shorting a power bus (CalTrans radio at Loma Prieta), and the loss of power to Yerba Buena Island when the east span of the Bay Bridge failed (and the generator ran out of fuel). A number of commercial systems were taken off the air, caused by the failure of overloaded towers at sites or improperly secured racks in the buildings.

In the 1992 Big Bear / Landers quakes, San Bernardino County lost power to some of their sites, with a couple of generator failures.

In the 1994 Northridge quake, where Oat Mountain moved significantly (IIRC the benchmark elevation grew 60+' and moved something like 100' north and 35' west during the main shock), again there were no major impacts to public safety systems (other than loading), and the failure of overloaded commercial towers (one spectacularly during an aftershock).

We've suffered more outages caused by wind or fire than earthquakes.

Extremely interesting and informative. Thanks for the input, Don.

Let's just hope the "big one" doesn't hit next year and that 2005 is a heck of a lot better than 2004 is\was. :-)

Happy new year,

-Roger

Last Update unless conditions warrant.

Battalion 1 and Light Unit 3 (only) is also responding. LU 1 is unavail

For those who don't know this area: This part of 280 is notorious for accidents as there is usually slow/stopped traffic trying to go onto North 880 or to Stevens Creek Blvd/Valley Fair Mall. As traffic zips by at 65+ in the 1,2,3 lanes the #4 lane contends with people trying to get into the exit lane for North 880 or to cross thru that lane and into the South Hwy 17 connector ramp. Doesnt' suprise me that there is an MVA there.

For any of the US USAR Task Forces to go, a request must be made to the US State Department's Office of Foreign Disaster Assistance (OFDA), who would request DHS/FEMA dispatch the TF(s) that are on-call for a foreign deployment (not all of the 28 TFs in the US are certified for OFDA missions).

To my knowledge, no such request has been made as of this time.

I can't recall any for the Calif. Task Forces, although I know one of
the L.A. area TFs is on the OFDA rotation. President Bush has offered US
assistance; the impacted countries only have to ask.

If I hear something, I will advise.

<<<snip>>>

While we are not using trunking systems, we do rely on microwave to loop the mountain tops. For redundancy, if a site fails that loop (there are several) will try to reverse itself, and if that does not work, the mountain top repeaters will automatically go into "in cabinet repeat". This makes them essentially stand alone repeaters. Not all of the mountain tops do this but enough to insure that we always cover a majority of the county.

With our new system (that hopefully will go on line early next year) there are numerous back-up transmitters and receivers in stand-by mode if a main transmitter or receiver should fail. I think they will automatically switch within 1 minute. The microwave system also has lots of redundancy built in, just in case "the big one" should hit or any other major disaster.

It all depends on how much money and resources the owners and designers want to put into a system.

Mike

11600 (sounds like PD)
734349 (weird TG number....not sure who this is)

If anybody monitoring MERA can identify these TG's please contact me off list....thanks.

-Roger

483.1625 - No address given yet, but I'd guess 100 Mathilda Place.

Wish I recorded it - one of the engines told the units to switch to channel 3 and standby...

About a minute later "Beep Beep Beep (voice imitating the beeps) Engine 1, Engine 3 (etc) and patrol, respond to a 904 structure, fire seen."

I'm surprised no one responded with "What's the address???"

CHP advising north bound 101 at central San Rafael flooding to the point where almost unsurpassable. Public works busy all over the county on MERA cleaning up flooding problems including downed trees.

High tide is at 13:00 and the rain seems pretty steady.

I'm hearing a lot of traffic on Fire Mutual Aid 151.040 besides the usual MERA public works TG's.

Here is copy of 'Readme' file:
Please find a copy of my Pro-96/Win96 profile for the San Francisco International Airport. If someone is interested in taking a 'field trip' to KSFO and try to help fill in the missing pieces, please respond on bayscan@yahoogroups.com and we can try to coordinate a trip.

And now the radio settings...

Settings/Weather
================
NWR SAME Codes for San Francisco and San Mateo Counties.

Extended frequencies are enabled.

'Battery level LO' set to 4.00 for NiMH batteries.

Rest of settings are set to default values.

Bank 1 - KSFO Field
===================
These are frequencies local to the field, such as ATIS, Ground and Tower. Since the ATIS are in constant operation, they are locked out.

Source:
www.airnav.com
DAFIF / US IFR Supplement

Bank 2 - FCC Air/ARINC
======================
These are air frequencies licensed to ARINC by the FCC. These are managed by ARINC and are used as per-carrier operations frequencies. Airlines call ahead with special gate and maintenance

requests. Most of these frequencies are unverified, so they are labeled with their FCC callsigns. They are sorted in frequency order.

Source:
www.fcc.gov

Bank 3 - Bay Approach
==========
Bay approach and departure frequencies for KSFO.

Source:
www.airnav.com
DAFIF / US IFR Supplement

Bank 4 - SFO Operations
==========
Ops, maintenance and utility frequencies.

Source:
Kelty Golden Gate Region

Bank 5 - Law Enforcement
==========
SFO Traffic, Police and Security frequencies. Includes FAA/RCOM frequencies used by TSA.

Source:
Kelty Golden Gate Region
Monitoring Times

Bank 6 - Cargo Carriers
==========
FCC licensed frequencies for cargo carriers operating from KSFO.

Source:
www.fcc.gov

Bank 7 - United Airlines (not heard)
==========
FCC licensed frequencies for United Airlines near KSFO. These frequencies have not been monitored. The frequencies are sorted in order and grouped by repeater in and out pair. They are labeled by their FCC callsign.

Source:
www.fcc.gov

Bank 8 - UAL / Skywest
==========
FCC licensed frequencies for United Airlines near KSFO. The frequencies that have been monitored contain a tone setting. If a frequency is missing a tone, it means it has yet to be monitored.

It is included here (and not Bank7) because it completes a repeater split or it is from Skywest.

SkyWest is a regional carrier that operates under the United Express name.

Note that United appears to commonly use 203.5 as their CTCSS code and SkyWest appears to use 192.8.

Source:
www.fcc.gov
Personal monitoring

Bank 9 - Passenger
==========
FCC licensed frequencies for other passenger carriers near KSFO. The frequencies that have been monitored contain a tone setting. If a frequency is missing a tone, it means it has yet to be monitored.

Note that several airlines can share a common frequency and use different DPL or CTCSS to separate users. If a frequency is shared, the text label ends with a '*'. The '*' is a reminder not to store the first monitored tone, since it may or may not correspond to this specific user.

I have been listening to what I thought were vhf low band freqs used by road crews in sonoma county but haven't heard anything in hours. I am listening to the following from a Kelty book that is a couple of years old.

45.760
45.800
156.210

Any idea of these are still accurate or have they moved. I also had some one tell me that they thought soco was operating an analog trunk system for some functions but they did not know what for. Any ideas if this is true.

I never saw the article before. Those who have been in the bay area a long time will recall how the Alameda PD used to talk about African-Americans, something found first via scanner and later on MDTs. I'm against all scrambling.

Some people will try and start an argument with a post... ;)

Anyway, I didn't want to start a discussion about encryption, just
curious why we need 1MB for an article that is about 3years old...

John,

45.76 is the main roads channel and 45.80 is the secondary channel. 156.21 is used for handhelds for traffic control. I've been listening to 45.76 and there has been some traffic but, except for putting out the flooding signs in the usual places, there really hasn't been any problems here compared to Marin.

I don't know who told you that the S.O. was using any analog trunking but they are wrong. Our entire system is conventional UHF except for the MDC's, which is on 800. We've just spent the last year getting all the LE agendies except Rohnert Park on convetional UHF and that was painful enough. I think bringing up any kind of trunking right now would cause a revolt. <g>

Date: 2004-12-28 04:30:42 UTC
From: Cortland
Topic: 35079 Message: 35106

Here in RP once in a while I'll hear something on the low-band road frequencies. More often, I hear activity from Caltrans' trunked system (which here doesn't need a trunking scanner to enjoy).

One neighbor is a Petaluma cop, and a former neighbor is a Cotati SGT. They LIKED my little Amateur dual and tri-banders.

The Petaluma view as expressed to me is that UHF is a pain in the... neck. It's never worked as well as the VHF system, and a South Bay agency already uses (with the same tone!) what was to have been Petaluma's Channel 2. Indeed, they are loud and clear on a handheld in RP.

John,

I know of no plans to move any county services to a trunked system
but we do have some low band stuff for parks and roads that's getting
pretty old so maybe that's the plan.

Rohnert Park has fought the UHF unification plan tooth and nail.
Since they are a public safety department, the are both police and
firefighters. All the fire agencies are on VHF so that would mean
installing UHF radios in all the patrol units and the fire rigs since
their public safety officers can switch roles in a moments notice. It
would also mean buying UHF portables for everyone and they'd still
have to have their VHF radios as well. There was talk of a radio
patch to solve this problem but it never seemed to make it off the
ground. Right now, Rohnert Park is completely isolated on VHF for
police services in Sonoma County.

Regards, Jim

You've got an assortment of reasons why it won't work. Politics, money, capacity limitations for Motorola networks (You would need to go fully APCO-25 at every site to link that many sites), and delegation of administration are just a few.

With County trunked systems such as the San Diego County RCS and Orange County you had one entity who took on building and managing the whole network. There weren't already preexisting systems that were merged in. So a different situation here that's not a viable example. The only example I can think of would be the system in Seattle, Washington. In their situation, IIRC, they have a joint powers association making the decisions over it all that seems to work but you still have different agencies managing their own sites so many sites aren't maintained and managed the same as the others. Some very terribly.

Regarding the problems with the RCS and the last large fire, this was due to the East County sites having the capacity of 2 to 3 channels. Plus you have the county putting fire tacs onto the trunked system so the East County sites busied REAL fast (most users don't know the site's capacity, they just know they have another channel they can use if one is busy). The County has since made changes but it can still happen again. The County just doesn't have the money to increase capacity.

Regarding microwave linking, generally the networks for public safety systems are setup like Don mentioned. Even if you lose a link the site will continue to operate in a standalone fashion. You just lose the ability to communicate across multiple sites. The link is far

from being a concern. The biggest enemy to radio communications is mother nature.

A better idea, versus linking trunked systems, is to make sure the nationwide interop channels are in the radios and link them. San Diego, for example, links VHF Clemars, 800 Clemars, and a talkgroup on the county system allowing 98% of the agencies to cross-communicate. This is a much better, and cheaper, solution.

Thanks for the informed post...

My question is how do they implement this linking? The radios
aren't multi-band, so that means cross band linking either needs to
be done by giving everyone a radio per band. Or they link back at
the central site.

If the microwave links go, and the site can't phone home, doesn't
that kill the multiband interoperability??

For those that remember my original post (see below) - heard a report on KGO-Radio this morning in which this incident is considered not only arson, but quite possibly a case of so-called eco-terrorism.

The arson investigator (Santa Clara County Fire) said that this is not the first time that a fire of this type has occurred in the area and he referenced the burning of a couple of Hummers last year only two miles from this fire. He also said that the vehicles burned this time were all truck and SUV types that were doused with gasoline.

I thought Rohnert Parks portables were UHF units that were patched over to their VHF frequencies. I don't know were I got this but I have definitely been wrong before.

John,

Not that I know of. There are some supervisors that got UHF radios installed in their units and UHF portables but the vast majority of Rohnert Park radios are VHF. I have a friend that's a comm tech for Rohnert Park so I'll check with him to make sure I'm right.

Regards, Jim

35118. shooting in Hunters Point

At 02:56 AM 12/28/2004, you wrote:

>Hi,
> Can anyone provide me with the Police and Fire frequencies for
>the Sunnyvale Public Safety?

Sunnyvale Fire: 482.7125
Sunnyvale PD: 482.9625
Channel 3: 483.1625
Channel 4: 482.4125
3 is generally a tac for fire, 4 for PD.

there is a Hummer dealer on Stevens Creek in Santa Clara , I used to " sniff" outside my truck and always glance at the building when driving by since the eco-terrorist have targeted them. Craig , keep your camera at the ready :-)

Wish I had the money , I would BUY a hummer just to tick them people off.

Wonder if this was related. I was on the road and was unable to post when it happened.. It was around 2:30-3:00pm. I heard Contra County SO. female deputy on CoCoSo3 sound very frantic. She stated "I need fire and amr code3, I have one person with no pulse and no breathing. Please advise CHP I need them code3 to 680 at Bollinger Cannyon Rd."

not really, the norris canyon / bollinger crash was much later than when you passed thru. What time did you hear the radio traffic ??? the first crash on 680/Vargas was posted by CHP at 1422. the 2nd crash posted at 1558 .....hour and half apart

no, this was separate... vargas is farther down. It may have been the vehicle accident Bollinger canyon 4 mile inside the county line. Alco and SRV responded. SRVPD was onscene administering CPR..

stfucode3 wrote:

> Wonder if this was related. I was on the road and was unable to post when it happened.. It was around 2:30-3:00pm. I heard Contra County SO. female deputy on CoCoSo3 sound very frantic. She stated "I need fire and amr code3, I have one person with no pulse and no breathing. Please advise CHP I need them code3 to 680 at Bollinger Cannyon Rd."

No, as San Diego operates a loop public safety microwave system
(and has done so for decades).

I got a pro 95 for Christmas I just have one quick question about programming it. Should I buy the software or should I just download it from the Internet? Is there any difference?

p.s. Should I buy the programming kit at radio shack?

Thanks
Kyle

35140. OT- Tsunami disaster comms/ Freq. info

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-12-29 06:27:14 UTC
From: KG6VXT
Topic: 35140 Message: 35140

For those interested... Most is relay traffic as the propogation
won't let you hear it from the west coast. LOTS of relay traffic through
Puckhet
and Bangkok via EcoLink on the internet. Of course my Thai is a little
rusty so
I have no idea what I'm hearing.

Modes are SSB for the HF stuff.

Internet link with live audio in Thailand:
http://www.siamradio.net/radio.html

All frequencies in Mhz, some traffic in English

7.060 special aid coordination broadcasts
14.195 and 21.295 Port Blair, on or near 14.190 MHz.
Other emergency traffic frequencies being reported include:
14.193 and 14.160 MHz in the Andaman and Nicobar Islands
7.050 MHz in South India
7.055 MHz in Indonesia
7.075 in Thailand

SATERN (Salvation Army Disaster Comm System)
14265 KHz SSB
14265 KHz SSB SAROF (Salvation Army Radio Operator Fellowship)
7265 KHz SSB SAROF
7265 KHz SSB
7265 KHz SSB
7265 KHz SSB
3740 KHz SSB
3920 KHz SSB
3963 KHz SSB
3977.7 KHz SSB

India
14.190, 14.195 and 14.200 MHz.

35144. SFFD Questions

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-12-29 20:32:11 UTC
From: Joe Giraudo
Topic: 35144 Message: 35144

I've been listening to Ben's streaming audio for the past few days.
I live in Eastern Nevada but grew up listening to KMA438 and KMA526
when they were on the old 45 and 46 mhz systems in the 1960's,
(before scanners).

What is "AOR" on the FD system, ("show us AOR")?

I also find it interesting that SFPD still uses the "hotsheet"
system. I guess this allows the officers to check out cars without
needing PC to pull them over and run the plates. I do still hear
them running "rollers" though. Here in Nevada, one doesn't hear
units running plates unles they are pulled over for something.

One non-radio-related question, (sorry). What is the significance of
the chrome bell on the front bumper of most SFFD apparatus? Is this
purely traditional or does it have some other significance? I
remember hearing the occasional clanging of these bells, usually when
an engine was making a turn at an intersection when running Code 2.

Thanks...

Date: 2004-12-29 20:58:03 UTC
From: caladded@aol.com
Topic: 35148 Message: 35148

I have a request for the IPN dispatchers on this list.....when
giving frequencies or talkgroups , don't use numbers like A3 B4 etc etc ,
use ACTUAL numbers i.e. 154.19 TG 14800

Reason being , for those people who have IPN pagers and DON'T have scanners
with alpha-numerics , it allows them to be able to monitor the fire/situation
immediatly without having to look up some list of what A3 or B4 etc means.
a little consideration please !! thanks

From: caladded@aol.com
Topic: 35144 Message: 35149

Joe , the bell is in fact tradition. it once , many , many years ago , would signify " all is OK" to the towns people and was , of course used widely among most fire depts. SFFD is not the only dept that still has bells , if you look at pictures of fire apparatus (such as on websites like www.firehouse.com) you see its not uncommon throughout the U.S.

So I take it then that these three are the only three P25 and they are all encrypted? Translation, my BC-246T is all that is required to track the SF system, and I'm not missing out on anything by not bringing the Pro-96?

the " rule of thumb" I go by for SF encryption is the 2 ,3 and 4 digit talkgroups. SFPD uses it for some commanders , narcotics, vice and other undercover. SFFD uses it for a couple TGs for EMS information such as patient names.

a BC246T will get you PLENTY of traffic from both SFPD and SFFD. If I lived (and wished I DID) in the city I might miss the fact that a few TGs are encrypted , but again, its not that many. Consider ourselves lucky .....we could live in Orange County which is FULL of encrypted TGs :-(

George mentions firefeeds.com which he, as he says host SFFD which is super because I now get it REAL loud and clear. I only wish I had 2 phone lines so I could monitor it 24/7. As a 4 year IPN dispatcher, I can tell you, if you join and dispatch enough calls, firefeeds can be free. For each call you dispatch on IPNs' system you get "points" which can be redeemed for various prizes up to scanners .....although it takes a whole lot of points for that. I recently cashed in points for 2 months subscription to firefeeds.com which is normally $7.95 per month ... note it does give you access for over 50 fire depts throughout the US and a couple in Canada. Such MAJOR depts like FDNY, Chicago, Dallas, LA County (not city) , Seattle, San Diego, Boston, Philadelphia, Pittsburgh are among the major. by subscribing to IPN, I get email alerts on these cites of major fires, then I click on firefeeds.com for that city to monitor that fire. it works well, i have monitored many big fires including recent high-rise fire in Chicago. The best thing I can suggest is read more about it.

Gosh - You still use Dial-up? <grin>

Check out DSLEXTREME - http://www.dslextreme.com - DSL as low as $21.95.
I've had the higher speed for about a month. Not bad. Today it was down for
about half the morning, but other than that, so far so good.

They've been watching a vehicle for a while, then it took off and they
pulled it over at Center and Carlson. Code-4 called, not the target.
Thanks, Chris: that was fun.

just MY opinion. nothing against anyone here, but WHY in the world as a hobbiest would you pay 8 bucks a month to listen to scanners...I used to dispatch IPN and unfortunately it wasn't worth doing for a free subscription. We should be setting up Live and FREE feeds within our own commmunity instead of signing up for this pay to listen to our own airwaves stuff that IPN and firefeeds subscribes too..

off my soapbox

Jordan it DOES narrow it down , just look at any list of SFPD/SFFD talkgroups , like on radioreference.com and only program the 5 digit talkgroups.

Topic: 35148 Message: 35177

its more than a free subscription. I have also cashed in for gift certificates for $100.00 for the outback restaurant as Christmas gifts. I have used points for other stuff. Ben , you weren't with IPN for very long which is you right to quit. But for someone who is a least a bit active , its NOT hard to run up 150 pts which equals a month of firefeeds.com I get easily 400 points per month. I find the quality of the feeds much better than many, many free ones.

We should be setting up Live and FREE feeds within our own
community instead of signing up for this pay to listen to our own
airwaves stuff that IPN and firefeeds subscribes too..

no offence

but even free feeds aren't truly free as you have to pay for the internet connection to provide the feed(s) so in one form or another the statement "you get nothing for free" is true ;-)

Just my opinion...and I know this has been discussed in the past...but even if you DID know the address etc. I would think it poor judgement to post it here. I actually never even post UC operations on these boards, but for those that do feel it is ok, just a simple post is smartest. If someone wants to listen, they will.

Just my 2 cents.

Hi all. I've recently joined the group from Australia as we are planning a vacation to the US next year.

Could someone tell me what the frequencies are for SFFD (I presume its trunked) and can I use them in my BC245xlt.

Regards,

Ross

Subject: Re: [bayscan] Re: IPN dispatchers

just MY opinion. nothing against anyone here, but WHY in the world as a hobbiest would you pay 8 bucks a month to listen to scanners...I used to dispatch IPN and unfortunately it wasn't worth doing for a free subscription. We should be setting up Live and FREE feeds within our own commmunity instead of signing up for this pay to listen to our own airwaves stuff that IPN and firefeeds subscribes too..

off my soapbox

so the people who are paying for the service are among other things
subsidizing free giveaways to the "non paying" subscribers. To me its
sucky to turn a hobby like this into a money making venture.

I downloaded this file to Win96 & after looking at some of it I have a curiosity question.
On several of the banks you have closed checked (not that it makes a difference since type is CONV) but on bank #5 there some entry changes in the FLEET MAP section. Just wondering what that was about.
Thanks for the file.
Brian

Why is a sucky way ? a group of 7 people with Goldwings began an organization of Gold Wing owners back in 1977 (two years after the first Gold Wing was built). Today, Paul Hildebrand is the Chief Executive Officer of the Gold Wing Road Riders Association which has nearly 90,000 members. It was " his baby" and ITS a hobby. I am sure he has profitted WELL from and it and SO what , he started it. This is America and its about making money. NO ONE forces anyone to join IPN or Firefeeds.com so why is it sucky ?

I have to agree, " certain" communications are better left OFF the internet, sit back and enjoy your scanner and what you hear. I have heard UC stuff too but prefer to keep it to myself. I know there is at least a few police officers on this list that would appreciate keeping those communications to ones' self.

35196. Re: [bayscan] Re: IPN dispatchers

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-12-30 04:40:04 UTC
From: Ben
Topic: 35148 Message: 35196

Its sucky because in alot of area the only feed is one that you have to pay to listen to. that takes away from the hobby and makes it commercial. And the gold wing association is like apples and oranges. I don't think Paul asked everyone to pay monthly to be in the club. it was for the love of goldwings.

From: Scanner 4
Topic: 35148 Message: 35197

and what stops anyone from buy their own scanner, which I think is more the point.

Look at it this way, what if I didn't want to but a $300.00+ radio and learn about Trunking, APCO-25 and the rest of the information, it is easier to pay 10.00 bucks amonth to listen to the whole country and not just my local area.
and I'm not the only one who receives money support for my services I know of a few folks who sell there feeds to Builders for fire damage and repair so what's the differents

From: KG6VXT
Topic: 35198 Message: 35198

El Faro Mexican Restaurant
Scott's Valley

154.3250 - Red
154.1900 - Yellow - Command
154.0550 - Black - Fire Ground Tactical

Can't hear it because of the coastal range in the way.

firedispatch.com only streams red (dispatch)

It was well involved upon initial dispatch with an instant 2nd alarm
upon arrival.

Got a page on this from scannerbuff.net

no, in the Gold Wing Road Riders we pay YEARLY !! (although I don't anymore because I am a life-member now) BUT its worth it. Just because its a hobby doesn't mean someone can't make money. Again , no one forces anyone to join/pay.

ED

Cmon lets Just scan! I don't want to hear about Goldwings or any Motorcycles.Who cares. There is a Big Storm going on right now (10:40 PM) Lots! of accident calls on 580/680 freeways. Alco 3456/ 57 in route to an accident on 680 between 580 and alcosta. Getting very windy out there. Alco 3456 being cancelled by SRVFD. CHP on Scene also 42.620 and Alco is on Alco Fire TG's

35201. ...WIND ADVISORY IN EFFECT FROM 9 PM PST TONIGHT TO 9 AM PST THURSDAY...

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-12-30 07:28:16 UTC
From: Robert W. Sanford
Topic: 35201 Message: 35201

I had a 52 mph gust here at 9:20 and the winds are a constant over 20 mph here now.
Numerous reports of trees and wires down.. Should be an interesting night as long as the power does not go out here :)

Robert
BayScan

NATIONAL WEATHER SERVICE SAN FRANCISCO CA
755 PM PST WED DEC 29 2004

...A PACIFIC STORM SYSTEM IS BRINGING STRONG GUSTY WINDS TO THE COAST AND HILLS OF THE SAN FRANCISCO AND MONTEREY BAY REGIONS...

.BY EARLY WEDNESDAY EVENING STRONG AND GUSTY SOUTH WINDS HAD DEVELOPED ALONG THE COAST AND IN THE HILLS OF THE SAN FRANCISCO BAY REGION. BY 730 PM PST WIND GUSTS OF 45 MPH OR HIGHER HAD BEEN RECORDED AT THE FOLLOWING LOCATIONS:

LOCATION (ELEV) COUNTY WIND GUST TIME

HAWKEYE RAWS (2000 FT) SONOMA 45 MPH 655 PM
BODEGA BAY SONOMA 45 MPH 615 PM
PIGEON POINT SAN MATEO 46 MPH 730 PM
LOS GATOS RAWS (2000 FT) SANTA CLARA 47 MPH 630 PM
SEA RANCH SONOMA 43 MPH 730 PM

WINDS ARE EXPECTED TO CONTINUE STRONG AND GUSTY OVERNIGHT WITH SPEEDS OF 20 TO 35 MPH WITH GUSTS TO 50 MPH...ESPECIALLY ALONG AND NEAR THE COAST AND IN THE COASTAL HILLS...AS WELL AS IN THE EAST BAY HILLS AND SANTA CRUZ MOUNTAINS. A WIND ADVISORY HAS BEEN ISSUED FOR ALL COASTAL ZONES AS WELL AS THE HILLS OF CONTRA COSTA...ALAMEDA... AND SANTA CLARA COUNTIES.

WITHIN A FEW HOURS WINDS WILL INCREASE ALONG THE SANTA CRUZ AND MONTEREY COUNTY COASTS AND REMAIN STRONG AND GUSTY OVERNIGHT AND INTO THURSDAY MORNING.

SONOMA AND MARIN COUNTIES-SAN FRANCISCO-
ALAMEDA AND CONTRA COSTA COUNTIES-SANTA CLARA COUNTY-
SAN MATEO COUNTY-
755 PM PST WED DEC 29 2004

...WIND ADVISORY IN EFFECT THROUGH 6 AM PST THURSDAY...

THE NATIONAL WEATHER SERVICE SAN FRANCISCO BAY REGION HAS ISSUED A
WIND ADVISORY. SOUTHEAST WINDS OF 20 TO 35 MPH WITH GUSTS TO 50 MPH
ARE EXPECTED TONIGHT. THE STRONGEST WINDS ARE EXPECTED NEAR AND ALONG
THE COAST...AND IN THE HILLS.

MOTORISTS IN THE ADVISORY AREA SHOULD USE CAUTION AS STRONG WIND
GUSTS CAN MAKE CONTROLLING YOUR VEHICLE MORE DIFFICULT...ESPECIALLY
HIGH PROFILE VEHICLES. THIS IS ESPECIALLY TRUE WHEN ROADWAYS
ARE WET...AS IS EXPECTED TO BE THE CASE. LOCALIZED POWER OUTAGES ARE
POSSIBLE IN THE ADVISORY AREA...AS THE GUSTY WINDS MAY CAUSE LARGE
TREE LIMBS TO FALL ON POWER LINES.

$$

COASTAL MONTEREY COUNTY-SANTA CRUZ COUNTY-
755 PM PST WED DEC 29 2004

...WIND ADVISORY IN EFFECT FROM 9 PM PST TONIGHT TO 9 AM PST
THURSDAY...

SOUTHEAST WINDS 15 TO 35 MPH WITH GUSTS TO 50 MPH ARE EXPECTED
TONIGHT...CONTINUING INTO THURSDAY MORNING. THE STRONGEST WINDS ARE
EXPECTED NEAR AND ALONG THE COAST...AND IN THE HILLS.

MOTORISTS IN THE ADVISORY AREA SHOULD USE CAUTION AS STRONG WIND
GUSTS CAN MAKE CONTROLLING YOUR VEHICLE MORE DIFFICULT...ESPECIALLY
HIGH PROFILE VEHICLES. THIS IS ESPECIALLY TRUE WHEN ROADWAYS
ARE WET...AS IS EXPECTED TO BE THE CASE. LOCALIZED POWER OUTAGES ARE

They always seem to use tac 7 for drug and other types of surveilance. Has anyone ever heard a body tap? I know you have to be really close to hear them. I once heard some pretty funny stuff on RPD tac 7 when they had an under cover guy staking out a park dressed like a bum. Guess someone had been rolling bums so they had a decoy out.

Thanks for your questions. You found one 'mistake'. The Fleet Map information was legacy when that bank was used for an ARINC trunked system. ARINC has since abandoned their Motorola Type I system and now has an iDen system, which is not monitorable by the Pro-96 (or any other scanner I know about).

The other question is a misunderstanding you have regarding OPEN/CLOSED setting on conventional banks. If the frequencies are configured for PL or DCS tone, then in CLOSED mode, the radio will only break squelch if the frequency has the mathcing tone. In OPEN mode, the tone match isn't required.

That is still true, however the link is a rebroadcast of a echolink audio feed - think of it as putting a ham radio frequency in your scanner. You can't transmit. :)

OK, that's kind of what I thought it was. I did go on echolink early this morning and was surprised at the new number of countries on there. I even found one Iraq station but no activity on it. Did find several sites pertaining to the quake/wave disaster but most were in Asian languages which you would expect. One of the conference links was an announcement in english from Thailand. Thanks Evan.

35219. State Prisons/Pro-96

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-12-30 19:46:49 UTC
From: Ed Tobiasz
Topic: 35219 Message: 35219

Does anyone have info on how to program the state prisons for a Pro-96?

I'm looking at Radio Reference and noticed that they all share the same basic frequencies.

Should it be possible to program a "Master" bank for all of them???

I've also noticed that RR lists some as Motorol Type 1 and some as Motorola Type II. Are they mixed or the same??

Thanks

Ed

Mixed bag, depending on when the system was installed.

From: jjcooke@yahoo.com
Topic: 35222 Message: 35222

It was just announced tha the LA and Fairfax, Virginia USAR teams are being dipsatched to the Pacific. I think LA is headed for Indonesia and Fairfax is headed for Sri Lanka. I have no idea how long it will take to get them there since it's a huge logistical undertaking. I also have no idea what they will do when they get there since it's a recovery, not a rescue efort. The important things will be clean water and food distribution, things that USAR teams aren't really qualified to do. I assume this is a PR effort ot make our involvement in the disaster look better in the press.

Regards, Jim

My brother lives in Caron City. With exception of Washoe County, including Reno and the NHP, everything in northern Nevada is conventional. Las Vegas has moved the fire service to trunked but the police are still on VHF. I plugged in a bunch of supposed trunked NHP channels on a trip from Carson to St. George and you can just as easily listen in conventional mode since most of the sites only have three frequencies. I heard more NHP traffic on the various county frequencies than I ever did on the NHP trunk system.

Regards, Jim

My understanding is that a limited number of Technical Specialists
from the two Task Forces (approx. 6 people per TF) are being
dispatched, not the entire TF with equipment.

Thanks, did not catch the fact that it worked that way for the CT/DC in
CLOSED. Only knew about the Settings page under TUNE MODE that would give
the CT/DC number if you had either selected there, but not the CLOSED
option. What happens when CLOSED is checked & "0" is entered into the CT/DC
column, does it act like OPEN then on that freq?

today, the marin i.j. reported that a chp officer was assaulted with his service radio tuesday, at vista point near the golden gate bridge. the officer, whom chp officials declined to identify, was beaten in the head when his radio was yanked from his duty belt by a man who had been seen acting suspiciously around parked cars. five citizens came to the aid of the officer, who subdued his assailant with pepper spray. both suspect and officer were treated at marin general hospital for cuts following the incident.

Don,

You're probably right. I just hear this on the news with no details
on the actual deployment. I assisted the Sacramento team when it went
to the World Trade Center and that was a three day ordeal just
getting all the people, equipment, and aircraft rounded up. I can't
imagine how much more difficult it would be deploy to the Pacific or
even what good most of their equipment would do there.

Regards, Jim

35240. Re: [bayscan] Re: USAR Teams to go to Disaster Areas

Topic: 35222 Message: 35240

Seems what they need is heavy equipment, need to make airstrips and some roads because lack of those is hampering getting water, food and other supplies to the people. Now how they get the heavy equipment to the areas, especially the islands is another huge problem.....

35241. Re: ot/old news: assault with service radio

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-12-31 04:04:08 UTC
From: jjcooke@yahoo.com
Topic: 35232 Message: 35241

I had this happen to me once, many years ago. We had GE portables with the screw-in antenna. Lucky for me, I hadn't checked the radio very carefully before I went on duty. I had two suspects that were breaking into a car in a school parking lot. One of the suspects grabbed my radio by the antenna when I was attempting cuff him. The antenna must have been held on by one thread because it came off when he got it over his head. The radio flew backwards and knocked his associate out cold. The suspect was so shocked looking at his buddy on the ground that I didn't even have to wrassle him to get him in the cuffs.<g>

Regards, Jim

35242. Code 33 / Trunking Question?

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-12-31 04:07:27 UTC
From: Nick in SLO
Topic: 35242 Message: 35242

Can an agency initiate a Code 33 beep/tone over a trunked system? I know you'll hear them say "Code 33" but I've never actually heard the tone. Here the systems that I have listened for the Code 33 beep/tone on:

Alameda County TRS
Marin County TRS
San Francisco TRS
Sac City TRS
Sac County TRS

Thanks,

Nick in San Luis Obispo - 20:05 Hours

P.S. I no longer live in Santa Rosa any longer, however I am waiting for a job opportunity to go through in Fresno, so hopefully I will be "Nick in Fresno" soon enough.

From: caladded@aol.com
Topic: 35242 Message: 35243

Nick , I am not 100 % positive , but I think I have heard Fremont using a beep for a 980 which is the same thing.

btw , getting a bulletproof vest ? Fresno is NASTY , I get IPN pages of shootings ALL the time from there. I even considered taking a ride and spending a couple or three nights there monitoring the scanners like I done with LA. shorter ride and a bit cheaper. Couldn't think of what "else" to do there besides that however :-)

Date: 2004-12-31 05:17:10 UTC
From: Robert W. Sanford
Topic: 3192 Message: 35246

I had one of my scanners on and it stopped on a frequency I have listed as
OES-3 154.710

Sounded like Contra Costa Sheriff putting out a code 777 then shortly
thereafter an AMBER alert.

Ill put the file into the files section under audio files named oes.wav

Robert
BayScan

I think it might be some CLEMARS freq also.

>what makes this interesting?

I wasn't aware, nor I'm sure a lot of other people, that AMR operated such
a wide-area
900 trunked system.

It's not in radioreference, so I thought other's may find it of interest.

If it's not.. then delete, delete, delete.

That would be the CLERS (California Law Enforcement Radio System)
dispatcher-to-dispatcher interagency coordination node on Mt. Diablo.
Also used for EAS messages.

as far as I know , its only for Contra Costa and West Alameda Counties.
Unless they use it for company operations in other counties.

Well, keep in mind AMR is - err WAS owned by Laidlaw, which now the AMR part was bought out buy some Canadian company, eh? so it's possible it's not for AMR per se, but another organization? I have yet to see a AMR rig (at least in Santa Clara County) with a 900 mhz radio, so we'll see....

Yup. Until you assign a tone by pressing enter. You'll see a tone
number and an 'S' for Searching. Press Enter and it stores the
searched tone.

35265. New years Eve Scanning

Yahoo group: bayscan (2004-11 — 2004-12)
Date: 2004-12-31 16:22:20 UTC
From: radiophanatic_71
Topic: 35265 Message: 35265

Should be a great night for scanning! Lots of activities in S.F. Check out that Trunked system. Oakland is always a good one. (usually some shootings, always aftermidnight when some people fire into the air) Check out that Trunked system. Alco Sheriff is always Busy, Dublin has some good stuff most times (Dublin PD TG 16048) Don't forget BART. They should have some good listening, especially thier PD TG's. and Cabs. They will be very busy and will most definately provide some funny stuff. (463.3750 is one for the Tri-Valley area and they will be busy.) Be safe out there and have a great night whatever you do. Happy New Year to all!!!! Fire up those scanners...

They were broadcasting the amber alert on KPIX 5 during Letterman last night. It sounded like the same alert signal used during weather alerts. I tuned in 162.4 weather during the amber broadcast but it wasn't simulcast from there. Any idea how they do that? The amber alert announcer sounded like someone on KCBS radio wich is connected with KPIX so maybe it was just in-house. I thought they planned to broadcast amber alerts on the weather channels, any info about that? Thanks, Jim

San Bruno PD requesting a Phase 1 - Tactical Alert for a party tonight (believe they mentioned 1900 start time) at a Mormon church at 975 Sneath Lane. Expecting 400- 500 Pacific Islanders at this event. Unknown number of Mutual-Aid Officers will stage at San Bruno Police Dept Hdqts on El Camino Real.

San Bruno Police 488.7875
Tac 1 ---------- 488.8625
Tac 2-----------488.7125
Green ---------- 488.8875

The problem with 10-57s (gunshots) in San Mateo County seems to focus on the southeast area. Redwood City Pd(TG17680) may have their " tracking" device for these again this year. Also expect Sheriffs office to have a problem in unincorporated Redwood City (TG 13840) Menlo Park PD 488.3375 and East Palo Alto PD 488.3875. Tac 3/ 488.5375 may also be active. Usually starts around 2300 hours or so.....
